# The Scottish Provident Institution

## 1837 - 1937

In 1837 when Queen Victoria ascended the Throne  
The Scottish Provident Institution was founded.

In 1937, the Coronation Year of His Majesty King  
Edward VIII, the Institution completes its hundredth  
year.

*The Distinctive System* of the Institution has stood  
the test of 100 years during which the soundness  
of its principles and the equity of their application  
have been amply proved.

Under the *Distinctive System* the premiums are so  
moderate that at early and middle ages the yearly sum  
charged elsewhere for a Whole Life Assurance of  
£1,000 (with profits) will here secure from the first  
as much as £1,300 or thereby, with right to Bonuses.  
The additional £300 is equivalent to an **Immediate  
and Certain Bonus of £30 per cent.**, as large as can  
be looked for in other Offices only after many years.

Annual Premium per £100 at death, with right to share in the Surplus.	Age next Birthday			
	25	30	35	40
Payable throughout Life .	£1 10 0	£1 15 2	£2 1 10	£2 10 4

*For the Year of Our Lord*

1937

BY

JOSEPH WHITAKER, F.S.A.

CONTAINING AN ACCOUNT OF THE  
ASTRONOMICAL AND OTHER PHENOMENA  
AND

A vast Amount of INFORMATION respecting the  
GOVERNMENT, FINANCES, POPULATION,  
COMMERCE, and GENERAL STATISTICS of  
the various Nations of the WORLD  
with an INDEX containing  
30,000  
References

LONDON

OFFICE: 12, WARWICK LANE,

PATERNOSTER ROW

NOTE.—“WHITAKER” for 1937 is published in three editions :—

Library Edition, Leather Binding with 13 Coloured Maps,  
1064 pages - 12s. 6d. net.

Complete Edition, Red and Green Cloth Cover, 1064 pages - 6s. net.

Abridged Edition, Orange Paper Cover, 760 pages - 3s. net.

## PREFACE TO THE 69<sup>TH</sup> ANNUAL VOLUME.

(1937.)

All editions of “WHITAKER” for the Coronation Year contain a large type Index of 243 columns (81 pages) and reference to the contents can be made with a minimum of delay.

The Complete Edition contains a portrait of His Majesty the King and the Library Edition is further equipped with thirteen coloured maps, which constitute a handy Atlas of the World.

The Coronation Ceremony, as last observed, is given in detail in all Editions and a conspectus of the Royal Family, from the time of King George III, shows the relationships between the House of Windsor and the other Reigning or Royal Houses.

Various additions have been made to the Official sections, including the staff of the Departments for Co-ordination of Defence, Munitions Production, Air Raids Precautions, and of the Unemployment Assistance Board; a list of the Secretaries of State for Scotland and a Table of Precedency for the Northern Kingdom; Members of the Privy Council, Senate and House of Commons of Northern Ireland; and the results of the 1936 Census of the Irish Free State and of many of the Dominions beyond the Seas.

The Complete and Library Editions also contain historical and statistical articles dealing with India, the Dominions and Colonies, together with special articles on matters of current interest, among them being Overcrowding in England and Wales, Fixed and Flexible Trusts, Exchange Equalisation Funds, Sterling in relation to Gold, Manorial Incidents and Tithes; while annual summaries deal with Weather, Science and Invention, Art, Literature, Drama, Films, Broadcasting, Television, Gliding and Stratosphere Flights.

While expressing his gratitude to correspondents in all parts of the world for their friendly co-operation, the Editor-in-Chief hopes his collaborators will continue their good offices in the coming year, but they are earnestly requested to note the *first* day of October as the *last* day for suggestions to reach the Office, if they are to be effective.

## A DEAF AID of Unique Range and Remarkable Fidelity

Mr. Seton Gordon, the well-known naturalist, writing about the Amplivox, says:

*'There are two outstanding, and I believe unique, features of your aid. In the first place, its freedom of distortion and purity of tone. In the second place, its power of picking up sounds near and far with equal facility. Quite honestly, I had not believed it possible that so perfect a deaf aid could be produced.'*

If, like Mr. Seton Gordon, you put results first in purchasing a hearing aid; if you demand that it shall enable you to join in general conversation and hear clearly at meetings, theatres, etc., and that it transmits speech and music undistorted, you should send for a copy of the Amplivox brochure describing the first 'High Fidelity' deaf aids employing the new midget radio valves.

It is results that count in the long run: may I send you a copy?

*A. Edwin Stevens*

Governing Director.

# PELMANISM.

PELMANISM is a system of training the mind on scientific lines. It has sometimes been described as "Psychology made popular and practical," but it is something more than that. The system is taught through the medium of fifteen "little grey books" which are accompanied by examination papers. After studying the first of these books, the student answers the accompanying examination paper to the best of his or her ability, and this paper is sent up to an examiner, who marks it and adds appropriate comments. Then the second book is taken, and so the Course continues until the fifteen lessons are completed.

It has sometimes been thought that Pelmanism is merely a system which trains the mind to increased efficiency from a merely money-making point of view—a system, that is, which increases the student's income-earning power. But this is not the case. A course of Pelmanism brings out the mind's latent powers and develops them to the highest point of Efficiency. It banishes such weaknesses and defects as:—

Depression	"Inferiority Complex"
Shyness	Indecision
Timidity	Weakness of Will
Forgetfulness	Pessimism
Boredom	Procrastination
The Worry Habit	Mental Inertia
Unnecessary Fears	Morbid Thoughts
Indefiniteness	Mind-Wandering

which interfere with the effective working powers of the mind, and in their place it develops strong, positive, vital qualities such as:—

Optimism	Organising Power
Cheerfulness	Directive Ability
Concentration	Self-Confidence
Observation	Self-Control
Judgment	Tact
Initiative	Reliability
Will-Power	Driving Force
Decision	Salesmanship
Resourcefulness	Business Acumen
and a Reliable Memory.	

By developing these qualities Pelmanism certainly adds to your efficiency and consequently to your Earning Power.

But what is equally important (as a result of cultivating your senses, getting your mind in order and helping you to acquire a healthy mental outlook), Pelmanism increases your happiness and enables you to develop a finer appreciation of the beauties of Nature, the Arts, and Life generally.

**In a sentence, Pelmanism enables you to live a fuller, richer, happier, and more successful existence.**

## WELL-KNOWN PELMANISTS.

The value of Pelmanism is endorsed by many of the best-known men and women of the day.

For example, Dame Sybil Thorndike, the world-famous actress-manager, writes as follows:—

"I am happy to tell you what a really excellent course in mind-training we have received from your 'little grey books.'

"I say 'we' because not only I but other members of my family have derived benefit from the scientific mind-training which is so ably and simply set forth by you. When mentally fatigued after strenuous rehearsing, a few of your mind exercises quickly bring concentration back to normal, and I find no difficulty in remembering the most difficult parts.

## DEVELOPING DORMANT QUALITIES.

"All through the ages we have been taught to train the body. We have been told that if our muscles were left in disuse they would gradually cease to function. And so it is with the mind. Indeed, even more quickly does this delicate part of our mechanism become atrophied. Pelmanism gives mind-exercise scientifically, and, because the principles are scientifically based, it not only improves but actually discovers qualities that would otherwise have remained dormant.

"We all wish for success, to be uplifted from the mediocre, but many grope blindly and never find the key to open the magic door leading to the road. Pelmanism, I am convinced, is the 'Open Sesame' that smooths away all difficulties, giving a mental clarity and quality of alertness that sees opportunities and uses them rightly.

"One of its chief charms is its simplicity, and with minds rich in perception life becomes altogether more satisfying."

Other distinguished advocates of Pelmanism include:

Sir Herbert Barker	Lord Baden Powell
Mr. Compton	The Baroness
Mackenzie	Orczy.
Lady Neish	Dame Ethel Smyth
Sir Arthur	Mus. Doc.
Quiller-Couch	Canon Hannay
Maj.-Gen. Sir F.	("George A.
Maurice. K.C.M.G.	Birmingham")
Miss Lillah McCarthy	Sir Max Pemberton
Mr. Gilbert Frankau	Mr. E. F. Benson
and others.	

## "The Science of Success."—Free.

The Pelman System is fully explained in a little book, entitled "**The Science of Success.**" This book shows you how you can practise Pelmanism in your spare time with exceedingly valuable results to yourself. The Course is simple and interesting and takes up very little time, and, as this book shows, you can enrol on the most convenient terms. This book will be sent you gratis and post free on application to-day to:—

**THE PELMAN INSTITUTE,**  
200, Pelman House,  
Bloomsbury Street, London, W.C.1.

Write or call for this free book to-day.

# HEALTHFUL COMFORT

The Burberry is the world's best weatherproof—for healthfulness, comfort and weatherproof efficiency.

The Burberry is the ideal coat for a wet day and it excels also as an overcoat that fulfils the dual purpose—warmth-giving in bitter weather, yet, by its self-ventilating qualities, the coolest wear when it is mild.

*Patterns and Prices sent on mention of "Whitaker's Almanack."*

## WARNING.

No garment or material, unless it is the manufacture or merchandise of Burberrys Limited, may be described as "BURBERRY," a Registered Trade Mark protected all over the world.

N.B.—Proceedings will be taken against offenders using the word "Burberry" wrongfully, whether with or without knowledge.

## TRAVEL INWARDS, INTO THE UNITED KINGDOM, BY SEA.

(Number of Passengers' Voyages, Immigrants included.)

Year.	From Continent of Europe (including Channel Islands and all Mediterranean and Black Sea Ports).			From Ports Ex-Europe.				From I.F.S. Ports.	Total Inwards.
	British Subjects.	Aliens.	Total.	From British Empire Ports, British Subjects.	From Foreign Ports, British Subjects.	From all Ports. Aliens.	Total.	British Subjects and Aliens together.	
1932	757,381	290,576	1,047,957	122,147	56,950	97,712	275,809	375,259	1,700,025
1933	882,609	305,737	1,190,346	106,065	49,092	97,988	253,145	363,726	1,807,272
1934	909,755	333,823	1,243,578	104,254	51,393	93,623	249,271	393,143	1,885,991
1935*	1,019,787	355,665	1,375,453 (a)	105,285	51,810	94,202	252,397 (b)	433,575	2,061,425

(a) Includes travellers by Air, 79,371 persons.

(b) Includes 36,000 "Cruisers" versus 44,500 in 1934.

\* Provisional Figures.

A statistician's very careful dissection of the 1931 travellers to the United Kingdom estimated the "Tourists" at 569,000, of whom 351,000 were probably foreigners and 218,000 were Overseas-British, the former residing here for 22 days, the latter 60 days, on the average, and spending £30 and £45 here per head respectively, say a total of 17½ million pounds, against which an estimated number of United Kingdom "Tourists" going overseas to foreign and British countries, 1,233,000, were reckoned to spend some £100, some £30 and some £20 per head, a total of 27½ million pounds.

The 1935 "Tourist" receipts and expenditure by the United Kingdom probably approximate to those of 1931.

## TRAVEL, OUTWARDS, FROM THE UNITED KINGDOM, BY SEA

(Number of Passengers' Voyages, Emigrants included.)

Year.	To Continent of Europe (Mediterranean and Black Sea Ports including also Channel Islands).			To Ports Ex-Europe.				To I.F.S. Ports.	Total Outwards.
	British Subjects	Aliens.	Total.	To British Empire Ports, British Subjects.	To Foreign Ports, British Subjects.	To all Ports. Aliens.	Total.	British Subjects and Aliens together.	
1932	740,705	293,067	1,033,772	88,307	39,663	94,214	222,184	367,340	1,623,299

(a) Includes travellers by Air, 75,705 persons. Of the total 152,000 went to the Channel Islands, 14,000 of them by Air.

(b) Includes 36,000 "Cruisers" versus 44,500 in 1934.

\* Provisional figures.

In 1935, 276 British Subjects emigrating to places outside Europe were sent back (Canada, 104; U.S.A., 153); in 1934, 860 were sent back.

## THREE CALENDAR YEARS' FOOD IMPORTS.

Into Great Britain and Northern Ireland, with Seaports, 1902, 1903, and 1904. Imports  
Duty free at August 1, 1905. 1905 values are shown for comparison.

	1902 Tons	1903 Tons	1904 Tons		1902 Tons	1903 Tons	1904 Tons

## All Beef (regulated)—

Total .....

The latest yearly returns 1904 of cattle  
slaughtered in the United Kingdom is  
2,024,000, valued at an average of 600 lb. at meat  
price, annual value 1,214,000 tons. If 100 lb. of  
beef is taken, it amounts to 1,214,000 tons, which  
showed that these at 200 lb. a head must have  
valued 24,000 tons of value, or at total consumption  
of home and imported about 60 lb. of  
beef a head per annum.

Imports under licence from all countries  
free of duty except on tinned and essences, 10  
per cent. on others. Home Irish Free State  
import prohibited.

Total .....

The latest return of the number of sheep and  
lambs slaughtered in the United Kingdom for a  
whole year is 10,621,000. These taken at an  
average of 60 lb. of meat per sheep and 40 lb.  
per lamb give a home production of about  
240,000 tons, showing a total consumption of  
240,000 tons, or about 20 lb. per head per annum.

Duty free from all countries except Irish, Irish,  
Free State, charged up to 10 per cent. on others.  
All tinned and canned goods, however, charged  
10 per cent. on others.

Total..... 2,204,717,640 2,248,105,080 2,373,451,680

(And Great Britain itself imports 400,000,000 eggs yearly from Northern Ireland).

A Government estimate of the whole United Kingdom's home production of hens' eggs on farms and allotments is 4,620,000,000, add say 750,000,000 for small holdings and private poultry yards, giving, with the import, an average supply of 168 eggs per annum per head of population.

Eggs in shell from Empire sources free except Irish Free State, charged 40 per cent. *ad valorem*. From Foreign Countries 18s. to 18s. 9d. according to weight per 120 eggs is charged.

Cheese— From	lb.	lb.	lb.
New Zealand.....	230,622,016	234,308,928	197,466,080
Canada.....	70,503,776	58,264,976	52,565,072
Australia.....	10,357,212	12,820,976	15,035,888

Further 1,000,000,000 lb. of Molasses, 115,000,000 lb. Refined Sugar and 42,000,000 lb. Glucose were imported in 1935, while some 750,000,000 lb. Refined Sugar and 130,000,000 lb. Molasses were exported, mainly to foreign countries. 750,000,000 lb. of Sugar remained in bond at the end of the year. With the home production from Beet in 1935, say 480,000 tons or about 1,100,000,000 lb.—the per head consumption is about 100 lb. per annum.

The import duty on Sugar is graduated according to and diminishing with its polarization (strength); from foreign countries from 11s. 8d. down to 4s. 6d. per 112 lb., from the Empire from 5s. 10d. down to 2s. 5½d. and from certain British Colonies, Protectorates and Mandated Territories from 2s. 4½d. down to 9½d. per 112 lb.

*Milk, Condensed—(restricted)*

<i>From</i>	cwt.	cwt.	cwt.
All Countries .....			
Not Sweetened .....	380,851	342,001	293,978
Sweetened (whole and separated) ...	2,062,395	1,750,764	2,492,336
<b>Total .....</b>	<b>2,443,246</b>	<b>2,092,765</b>	<b>1,786,314</b>

The 1935 import, reckoned at its equivalent in liquid milk (1 cwt. = 34 gallons) plus a matter of 22,000,000 gallons in the form of powder (1 cwt. = 100 gallons) totals 83,000,000 gallons, whereas the home production of fresh milk in the United Kingdom is believed to be not less than 1,700,000,000 gallons annually, not counting that fed to stock; this, if averaged out, would give 310 pints per annum to every man, woman and child in the country, almost a pint a day.

Condensed milk imported pays 5s. per 112 lb. plus Sugar duty, sweetened; 6s. unsweetened. Milk powder 6s. per 112 lb.; 10 per cent. *ad valorem* if sweetened, plus the appropriate Sugar duty.

## BOY SCOUTS. (Incorporated.)

FOUNDED in 1908, as a result of an experimental camp held by the Chief Scout the previous summer at Brownsea Island, Dorsetshire, the movement was organised by Lord Baden-Powell, G.C.M.G., G.C.V.O., K.C.B., Chief Scout, to develop good citizenship among boys by forming their character—training them in habits of observation, obedience and self-reliance; inculcating loyalty and thoughtfulness for others; teaching them services useful to the public and handicrafts useful to themselves, and promoting their physical development and hygiene.

The Movement (whose membership exceeds 2,250,000), has taken root in all parts of the British Empire, and nearly every other country in the world.—*Imperial Headquarters*, 25 Buckingham Palace Road, London, S.W. 1.

## THE GIRL GUIDES ASSOCIATION.

A movement founded by Lord Baden-Powell, G.C.M.G., G.C.V.O., K.C.B., LL.D., Chief Scout, on the lines of the Boy Scouts and incorporated by Charter in 1915, while in the year 1923 H.M. the King granted the Movement a Royal Charter. Its aim is to develop good citizenship amongst girls by forming their character, training them in habits of observation, obedience, and self-reliance; inculcating loyalty and thoughtfulness for others, and teaching them services useful to the public and handicrafts useful to themselves. It also seeks to promote their physical development, making them capable of keeping good homes and of bringing up good children. Its desire is to co-operate with educational and other bodies working to this end. The membership of the Movement now numbers over 1,300,000 all over the world, that of the British Isles alone being over 580,000. *Imperial Headquarters*, 17-19 Buckingham Palace Road, London, S.W. 1.

THE Zodiac is an imaginary ring or broad circle in the heavens in form of a belt or girdle within which lie the apparent paths of the Sun, Moon and major planets. It is bounded by two parallel lines encircling the heavens, generally taken as  $18^\circ$  apart, and in the middle of which runs the ecliptic or path of the Sun in its annual course. The Zodiac is divided into twelve equal parts, each of  $30$  degrees in length, that are called Signs, which are of no astronomical import beyond the fact that they indicate stages in the Sun's journey, but they may have their use in astrology, and the division of the Zodiac was probably made in connexion therewith. The "Signs" take their names from certain of the constellations with which they respectively coincided at a certain period. The history of the constellations or grouping of stars in the sky is almost a matter of mythology, and there is no certain knowledge of when or by what nation or race they were formed, but undoubtedly the twelve constellation figures that lie in the Zodiac as defined have been considered of special importance, for indications of them are found more than those of others on monuments of great antiquity and their names are used as those of the Signs. The Signs of the Zodiac are taken as beginning at the Vernal Equinox or the intersection of the plane of the Ecliptic with that of the Equator, which is adopted as the point where the Sun begins its annual journey, but the position of the Equinox is continually changing by reason of a fact called Precession, and hence since the Signs retain their original names they do not now coincide with the star-groups whose names they bear, and Aries the Ram, which was originally and is still taken as the first of the Signs, is now in the constellation Pisces, which precedes it by about  $30$  degrees in their daily course.

The known rate of motion of the Equinox among the stars due to Precession shows that this starting point must have been established rather more than 2,000 years ago, or about the time of the Greek astronomer Hipparchus, who lived in the second century B.C., and may be considered the founder of accurate sidereal astronomy. But from other evidence the Zodiac itself appears to be earlier, and it is said to have had its origin with the ancient Hindus and to have passed westward through Persia, Arabia, Babylon, Egypt, to Europe, as traces of the Zodiac have been found in all those countries: the Houses of the Sun mentioned in Babylonian records were doubtless to the Babylonian astrologers the equivalent of the Signs of the Zodiac used by those of later date, and the point has been taken that since the Vernal Equinox was in the constellation of the Bull 4,000 years ago, the Sign that bears that name was then the first of the twelve and the prominent Pleiades group which appears on many ancient monuments and its principal star Alcyone were leading objects to the astronomers or astrologers of that date, but there is no direct evidence that compels us to accept Taurus as the beginning of the Zodiac.

Much mystical erudition has been bestowed upon the Signs of the Zodiac, but passing over suggestions that the conception of the Zodiac is of divine revelation and that the figures in the sky have some association with the Cherubim and Seraphim of the Bible, we are

on surer ground in noting that Mazzaroth (Job xxxviii, 32), which means to encircle or surround, was the Hebrew name for the Zodiac. The latter word is evidently of Greek derivation, and Sir George Cornwall Lewis quotes *ζωδιον* as used by Herodotus to represent sculptured figures of animals on a goblet, and hence *ο κύκλος ζωδιακός* may well be accepted as the name of this band in the sky.

A catalogue has been made (Grimaldi, 1905) of all, so far as is known, sculptured or incised representations on ancient monuments or tablets of the traditional constellation figures, either Zodiacal or otherwise, together with many modern pictures of the Zodiac. The first in the list is a roughly shaped upright black stone about  $2\frac{1}{2}$  feet high and  $1\frac{1}{2}$  feet broad in the Babylonian room of the British Museum on the front of which are lightly incised ten out of the twelve Signs and other constellation figures. This was found near the Tigris opposite Bagdad and its date is estimated to be about B.C. 1187-1175. It appears to be one of those Pillar Stones called Massebah that the Hebrews were commanded to destroy (Exodus xxvii, 24; xxxiv, 13). There are others of the kind, but these stones have relation to purely mundane affairs, and the symbols are those of deities invoked, some of which may be or may resemble those of astral character. A circular planisphere containing the twelve Signs as now used with thirty-six other constellations, said to be the only ancient circular planisphere extant, that was found on the ceiling of a chamber in the temple of Isis at Tentyr, near Denderah, Upper Egypt, is of considerable note. It was removed to the hall of the Bibliothèque Nationale, Paris, in 1821. The date of this has been the subject of much research, 716 B.C. being assigned by one authority, though there have been earlier, perhaps rather fanciful, estimates. Recent opinion affirms that its creation is not earlier than the first century of our era. On the title-page of WHITAKER a Zodiac is depicted, with the Signs, anti-clockwise, or in what is known as the Egyptian order: in the issues of the Almanack prior to 1888, they were given in clockwise order. The hour when the Sun enters each Sign of the Zodiac, which varies year by year in accordance with the leap-year cycle, and slightly for other reasons, is given in the heading of page 1 of each month, since it may be of use to those who practise astrology. These times of entry in 1937 are shown in the Table below with the names of the signs and symbols.

#### SIGNS OF THE ZODIAC.

In 1937 the Sun enters—

♈ Aries, the Ram	Mar. 21d. 14.
♉ Taurus, the Bull	April 20 12
♊ Gemini, the Twins	May 21 12
♋ Cancer, the Crab	June 21 20
♌ Leo, the Lion	July 23 7
♍ Virgo, the Virgin	Aug. 23 14
♎ Libra, the Balance	Sept. 23 11
♏ Scorpio, the Scorpion	Oct. 23 29
♐ Sagittarius, the Archer	Nov. 22 17
♑ Capricornus, the Sea Goat	Dec. 22 6
♒ Aquarius, the Water Bearer	Jan. 20 11
♓ Pisces, the Fishes	Feb. 19 2

# PERPETUAL CALENDAR

111

or Tables for finding the day of the week for any date A.D.

(Copyright by A. F. L. Wilkinson.)

TO USE THE CALENDAR:—Look up the Index Numbers corresponding to the Century, the Year (last two figures), and the Month, respectively, in the first three tables; add these three numbers together and add also the Day of the Month; in the fourth table, *opposite the sum obtained*, read the Day of the Week.

(1)

NOTE.—In England the change from the Julian System or Old Style to the Gregorian System or New Style, was made in September, 1752, when the 11 days 3rd to 13th inclusive were omitted, and Wednesday Sept. 2 was immediately followed by Thursday Sept. 14. Other countries made the change at dates varying from 1582 to 1923. (See p. 162.)

If it is desired to look up a date after 1752 in Old Style, or before 1752 in New Style, it can be done by taking a date 700 years earlier in the first case or 400 years later in the second case; e.g., 1923 in Old Style is the same as 1223, and 1582 in New Style is the same as 1982.

*For ascertaining Any Day of the Week for any given time within Two Hundred Years from the introduction of the New Style, 1752,† to 1952 inclusive.*

[illegible]

NOTE.—To ascertain any day of the week, first look in the table for the year required and under the months are figures which refer to the corresponding figures at the head of the columns of days below. For Example, — To know on what day of the week Aug. 4 fell in the year 1914, in the table of years look for 1914, and in a parallel line, under Aug., is fig. 6, which directs to col. 6, in which it will be seen that Aug. 4 fell on Tuesday.

Jupiter's Satellites Because the planet is near the Sun the configurations are not given until Feb. 6.

The columns in this place on other pages show the order of the four large Satellites of Jupiter with respect to the planet as seen in an inverted telescope. The open circle indicates the planet's disc, the black circle shows that a satellite, whose number is wanting, is either in eclipse or is occulted, whilst the sign 4 shows that it is in transit across the disc.

## CONJUNCTIONS, ECLIPSES, AND OTHER CELESTIAL PHENOMENA.

January 1. Day breaks 6h. 2m. Civil twilight ends 16h. 52m. Night begins 18h. 5m. The length of the Day from Sunrise to sunset is 7h. 51m.

The ending of Civil twilight is here defined as the time when the Sun's centre is 73' below the horizon. Day breaks and Night begins when it is 18' below.

Jan. 1. Earth at least distance from the Sun. Perihelion 91,340,000 miles.

Jan. 2-4. Meteors of the Quadrantid stream may appear.

Jan. 6, 4h. Mars in conjunction with  $\gamma$ .  $\delta$  6° N.

Jan. 11, 17h. Jupiter in conjunction with  $\gamma$ .  $\gamma$  1° S.

Jan. 14. Mercury in inferior conjunction.

Jan. 16, 15h. Venus in conjunction with  $\gamma$ .  $\eta$  6° S.

Jan. 17, 4h. Saturn in conjunction with  $\gamma$ .  $\delta$  8° S.

Jan. 22, aft. Occultation of  $\gamma$  Tauri, mag. 4.3, by the Moon. See p. 171.

Jan. 24, 2h. Venus and Saturn in conjunction.  $\eta$  1° 9' N.

In this month the Mornings increase 26 mins.; the Afternoons 46 mins.

## APPARENT RIGHT ASCENSION AND DECLINATION OF THE PLANETS AT NOON.

Notes on Time Numeration: Tables of the Moon, &c.—According to the practice of recent years, the day as treated in this Almanack is divided into 24 hours, numbered from 0 to 23, the hour following the midnight which begins the day being called 0, but in the Tables of High Water on pages 117, 121, &c., the older system is followed, both midnight and noon being 0h.

Effort was made in the year 1934 to ascertain public opinion as to the general adoption of this system, which has been used in astronomy since 1925. There was found to be some feeling that it would be expedient for railway work and other similar purposes, but there did not appear to be a demand for its general use in everyday life.

On page 3 of each month the position of the Moon, and other details relating thereto, are given for the midnight which ends the day specified in the first column. The second column gives the

## SATURN ♄

D.	Rises h. m.	Souths h. m.	Sets h. m.
3	10 58	16 36	21 54
10	10 31	16 0	21 30
17	10 5	15 35	21 6
24	9 38	15 10	20 42
31	9 12	14 45	20 19

time of the rising which happens during that day, and the figures in the two following columns show the time of the southing and of the setting which next follow that rising. These sometimes happen after the midnight which ends the day; in such cases the figures are in heavy type, so that it is to be remembered in using this table that these distinctive figures always indicate a time on the morrow of the day of its line. A similar system is followed in the Tables of the planets. (See pages 129, 133, 137, &c.) In the ephemerides of the planets on page 3 of each month, italic figures are occasionally used (pages 124, 152,) to indicate the change of sign of the declination noted in the heading.

## MORNING AND EVENING STARS.

☿ MERCURY, having been at eastern elongation on December 29th, is an evening star in the first part of the month, but is not likely to be visible to the unaided eye.

♀ VENUS is a brilliant object to be seen in the south-west in the early part of the evening. Its brightness increases to magnitude - 4.0 at the end of the month. It moves through Aquarius into Pisces and is in conjunction with Saturn on the night of the 23rd.

♂ MARS is a morning star moving from the constellation Virgo into Libra. It rises in the east-south-east. Magnitude + 1.4 to + 1.0.

♃ JUPITER, having been in conjunction on Dec. 27th, rises shortly before the Sun. Magnitude - 1.4.

♄ SATURN is to be seen in the western sky in the early part of the evening. Magnitude + 1.4. See note p. 128.

## CONJUNCTIONS, ECLIPSES, AND OTHER CELESTIAL PHENOMENA.

February 1. Day breaks at 5<sup>h</sup>. 44m. Civil twilight ends at 17<sup>h</sup>. 34m. Night begins at 18<sup>h</sup>. 43m. The length of the Day is 9<sup>h</sup>. 6m.

Feb. 3, 16<sup>h</sup>. Mars in conjunction with  $\gamma$ . 4 5' N.

Feb. 5. Venus at greatest elongation. 47° E.

Feb. 7. Mercury at greatest elongation. 26° W.

Feb. 8, 13<sup>h</sup>. Jupiter in conjunction with  $\gamma$ . 2 2' S.

Feb. 9, 7<sup>h</sup>. Mercury in conjunction with  $\gamma$ . 2 2' S.

Feb. 13, 15<sup>h</sup>. Saturn in conjunction with  $\gamma$ . 8 8' S.

Feb. 14, 23<sup>h</sup>. Venus in conjunction with  $\gamma$ . 3 3' S.

Feb. 18, aft. Occultation of  $\kappa$  Tauri, mag. 4.4, and 67 Tauri, mag. 5.4 by the Moon. See p. 171.

Feb. 20. The plane of Saturn's ring passes through the earth. See note p. 128 and Table p. 183.

In this month the Mornings increase 5<sup>m</sup>.; the Afternoons 49<sup>m</sup>. Constellations near the S. meridian at 22<sup>h</sup>.: Auriga, Taurus, Orion, Gemini, Canis Minor, Monoceros, Canis Major, Argo, Cancer, Hydra.

The Tide Tables.—In the Tables on the opposite page and others similar in this Almanack, the interval between successive high tides is generally more than 12 hours, so it follows that when one occurs shortly before midnight the following may be after noon of the next day. In such a case there will be no entry for the morning of that day in the Tables. Similarly the entry in the afternoon column is sometimes wanting. It occasionally happens that the interval between consecutive high tides is less than 12 hours, and in such a case there may be two tides in the morning and no entry in the afternoon column. (See Greenwich, March 26.) The small interval is to some extent a local phenomenon for it depends on the ratio of the diurnal to the semi-diurnal component of the tides and this depends on the dimensions of an estuary and the surrounding seas.

\* The days thus indicated throughout the Almanack are those on which High Tides may be expected. Strong northerly winds in the North Sea and a low barometer with heavy rains in the counties drained by the Thames may cause a higher rise of the river, and the low-lying riverside districts to be flooded.

### MORNING AND EVENING STARS.

☿ MERCURY is a morning star throughout February, but rises scarcely early enough to be a naked eye object.

♀ VENUS grows brighter and sets continuously later. It will be a conspicuous object at a considerable altitude in the evening twilight sky.

♂ MARS rises mostly within the hour following midnight. It continues to move eastward in the constellation Libra.

♃ JUPITER rises near daybreak throughout the month, and may be seen in the south-east in the constellation Sagittarius and below Aquila in the dawn. Mag. -1.5.

♄ SATURN is still in the western sky for an hour or two after sunset.

## CONJUNCTIONS, ECLIPSES, AND OTHER CELESTIAL PHENOMENA.

Mar. 1. Day breaks at 4h. 55m. Civil twilight ends 18h. 24m. Night begins 19h. 30m. The length of the Day is 10h. 50m.

Mar. 1-4. Mercury's have been seen near Vega about this date.

Mar. 3. 23h. Mars in conjunction with L. 3 N.

Mar. 8. 9h. Jupiter in conjunction with L. 3 S.

Mar. 8. Neptune in opposition. Distance from Earth 2,713,790,000.

Mar. 12. Venus at greatest brilliancy.

Mar. 15. 14h. Venus in conjunction with L. 2 N.

Mar. 16. Saturn in conjunction.

Mar. 21. 1h. Sun enters the Sign Aries (Equinox) Beginning of the Tropical Year.

Mar. 25. 9h. Occultation of Leonis, mag. 5.1 by the Moon. See p. 171.

Mar. 31. 21h. Mars in conjunction with L. 2 N.

The Zodiacal Light may be seen after sunset at the beginning and end of this month.

In this month the Mornings increase 67m. the Afternoons 52m.

Constellations near the Meridian at 22h. Gemini, Canis Minor, Monoceros, Argo, Lynx, Cancer, Hydra, Leo, Crater.

## MORNING AND EVENING STARS.

☿ MERCURY continues to rise before the Sun but will not be visible.

♀ VENUS is at greatest brilliancy on the 12th, and sets at about 10 o'clock in the evening during the greater part of the month. The appearance of the three-day old Moon in its neighbourhood on the evening of the 15th may make a pleasing spectacle. Magnitude -4.3.

♂ MARS rises at midnight in the middle of the month. It will be seen near the bright stars of Scorpius in the south-east and south in the early morning. It grows rapidly brighter. Magnitude +0.4 to -0.3.

♃ JUPITER is to be seen low down in the morning sky. In the south-east about 4 o'clock towards the end of the month.

♄ SATURN being in conjunction on the 16th is above the horizon almost wholly in daylight hours.

The Date of Easter.—The last previous occasion when Easter Day fell on March 28, as it does this year, was in 1880. It will next so happen in 1948, and the next occurrence will be in 2027.

Septuagesima is nine weeks before Easter and its latest date is therefore Feb. 21 normally, but it will be on Feb. 22 if Easter be on April 25 in a leap year. With the Julian Calendar this happened at intervals of 532 years, and it was so in England in 1736. It has not yet occurred in the Gregorian Calendar, and will not do so until A.D. 3784.

DAY OF

Configurations of Jupiter's Satellites at 4h. on. (See p. 116.)

## CONJUNCTIONS, ECLIPSES, AND OTHER CELESTIAL PHENOMENA.

April 1. Day breaks at 3h. 38m. Civil twilight ends 19h. 18m. Night begins 20h. 30m. The length of the Day is 12h. 53m.

Apr. 1, *morn.* Occultation of  $\rho$  Ophiuchi. mag. 4.8, by the Moon. See p. 171.

Apr. 5, *2h.* Jupiter in conjunction with  $\delta$ .  $\gamma$  3° S.

Apr. 7, *15h.* Mercury and Venus in conjunction.  $\delta$  6° 8' S.

Apr. 9, *22h.* Saturn in conjunction with  $\delta$ .  $\delta$  8° S.

Apr. 12, *8h.* Mercury and Uranus in conjunction.  $\gamma$  2° 4' N.

Apr. 12, *12h.* Mercury in conjunction with  $\delta$ .  $\gamma$  1° S.

Apr. 18. Venus at Inferior conjunction.

Apr. 20. Mercury at greatest elongation. 20° E.

Apr. 28, *3h.* Mars in conjunction with  $\delta$ .  $\delta$  1° N.

Apr. 30. Uranus in conjunction.

In this month the Mornings increase 62m.; the Afternoons 48m.

Constellations near the South meridian at 22h.: Cancer, Hydra, Leo, Leo Minor, Crater, Corvus, Virgo.

**Saturn's Rings.** Saturn at the beginning of this year is at the closing stage of an epoch in its career that occurs about every fifteenth year when its ring-system may be invisible, or nearly so, according to circumstances. Since the year 1921 the ring-system has been in such position in its orbit that the Sun has illuminated its north side. On December 28 last the Ring was edgewise to the Sun, and the Sun has since been on its south side. The Earth is generally on the same side of the ring-plane as the Sun, and changes sides with it (nearly), but in the year in which such a transition takes place the plane may pass three times through the Earth, and make interesting changes in our view of the planet, but on this occasion, for reasons that were explained in last year's issue of this Almanack, there is only one complete passage of that kind, and that does not occur until the end of February. It follows therefore that in the first two

## MORNING AND EVENING STARS.

☿ MERCURY will be at greatest eastern elongation on the 20th, and there will be an opportunity of seeing the planet with the naked eye. Ten days before the maximum elongation may be taken as a possible date of first visibility. The planet will then be diminishing in brightness. At half-past seven in the evening of April 10 it will be 15 degrees from the west point of the horizon towards the north at altitude 7 degrees.

♀ VENUS is an evening star in the first part of the month, but sets earlier rapidly. It will be on the right of and higher than Mercury about April 10.

♂ MARS is between S.E. and S. at midnight. It will be seen to the right of and above Antares. Mag. = 0.4 to -1.3.

♃ JUPITER is a morning star low in the south-east about 3 o'clock. It is moving from right to left in Sagittarius.

♄ SATURN rises in the dawn almost due east, but will not be a prominent object.

months of this year, the north side of the ring will be presented to the Earth, but the Sun will illuminate its south side, so that the rings during that time are theoretically invisible, but they may not be so. There will be little opportunity after their reappearance in February, but it will be of interest to scrutinize the planet, especially with large telescopes, later in the year after the conjunction of the planet. The Earth will be inclined as much as 5 degrees to the ring-plane in Saturni centric latitude in June.

CONJUNCTIONS, ECLIPSES, AND OTHER CELESTIAL PHENOMENA.

May 1. Day breaks at 2h. 4m. Civil twilight ends at 2h. 12m. Night begins 2h. 54m. The length of the Day is 14h. 46m.

May 2, 14h. Jupiter in conjunction with  $\gamma$ .  $2^{\circ}$  4' S.

May 7, 13h. Saturn in conjunction with  $\delta$ .  $1^{\circ}$  8' S.

May 8, 15h. Venus in conjunction with  $\delta$ .  $3^{\circ}$  8' S.

May 11, 11h. Mercury in inferior conjunction and in transit across the sun's disc. (See below and p. 170.)

May 14, aft. Occultation of  $\gamma$  Geminae, mag. 5.2, by the Moon. See p. 171.

May 19. Mars in opposition. Least distance from the Earth (May 28) 47,250,000 miles.

May 24. Venus at greatest brilliancy. Mag. -4.2.

May 24, 18h. Mars in conjunction with  $\delta$ .  $0^{\circ}$  6' N.

May 29, 20h. Jupiter in conjunction with  $\delta$ .  $2^{\circ}$  4' S.

A meteor shower, believed to have relation to Halley's comet, diverging from a point in Aquarius, sometimes appears in the mornings from May 1-6.

In this month the Mornings increase 43m.; the Afternoons 43m.

Constellations near the S. meridian at 22h.: Leo, Leo Minor, Crater, Hydra, Corvus, Virgo, Bootes, Libra.

A Transit of Mercury.—The planet Mercury describes its orbit round the Sun in 88 days, but the *synodic* period, or the interval from one conjunction, inferior (say), to the next of the kind is 116 days. Usually at inferior conjunction the planet, seen from the Earth, passes north of south of the Sun because of the inclination of its orbit to that of the earth, which is  $7^{\circ}$ , but if the conjunction occurs when the planet is very near a node, that being one of the points where the orbits intersect, it will pass across the disc of the Sun and be visible upon it as a small black spot—not, however, large enough to be seen without a telescope. Since the planet's nodes are in longitudes  $474^{\circ}$  and  $227^{\circ}$ , which are the heliocentric directions through which the Earth passes on November 10 and May 8, the transits can occur only near those dates. Since at a May transit the planet is comparatively near its aphelion it is nearer the Earth than it is at a November transit and therefore is more likely to escape the solar disc than in the latter case, and fewer transits in May than in November are to be expected, the ratio, in fact, being less than half.

finding the distance of the planet from the Sun, but in the case of Mercury the method is not

## MORNING AND EVENING STARS.

☿ MERCURY continues to set after the Sun in the early days of the month but will not be seen (see note below and page 170).

♀ VENUS is now a morning star rising rather more than an hour before the Sun throughout the month. At greatest brilliancy on the 24th. Mag. - 4<sup>2</sup>.

♂ MARS is conspicuous low down in the evening southern sky. It moves westward into Libra, leaving Antares and the bright stars of Scorpius on its left. Its magnitude at opposition on the 19th is - 1<sup>8</sup>, which is merely average for that configuration.

♃ JUPITER rises before midnight at the end of the month. It continues to move in Sagittarius, but changes its direction of motion on the 15th. Mag. - 1<sup>9</sup> to - 2<sup>1</sup>.

♄ SATURN rises in the dawn almost due east, and may be seen with difficulty in the brightening sky.

It is possible to evolve laws that regulate the recurrence of transits, and it is found that they fall into overlapping series, the interval between consecutive transits in each being 46 years. The position on the solar disc of the chord which the planet describes depends on the distance of the planet from the node, and ranges from a diameter of the disc to a tangent. Any individual position suffers a small displacement because of the situation of the observer on the Earth; and in the case of a transit of Venus it is this fact that makes the occurrence available as a means of

(Continued on p. 140.)

The theoretically perfect radiator is called a black body even if it is white hot, the name having been carried over from the early experiments on blackened copper spheres, to determine whether they fulfilled the theoretical condition for perfect radiation. A thing that appears black at ordinary temperatures, such as a lump of coal, or a black billiard ball, is not necessarily a black body when it is heated. It is black when it is cold, simply because it quenches all the light which falls upon it without preference for one colour over another.

A self-luminous body that is emitting a fair proportion of all colours,  
[Continued on p. 140.]

CONJUNCTIONS, ECLIPSES, AND OTHER CELESTIAL PHENOMENA.

July 1. Civil twilight ends 21h. 22m. In this month there is no closed night in the latitude of London until after the 20th, when the Sun will be 28° below the horizon at midnight. The length of the Day on July 1 is 16h. 29m.

July 1, 11h. Saturn in conjunction with ♃. h 8°S.

July 4, 23h. Venus in conjunction with ♃. ♀ 5°S.

July 5. Earth at greatest distance from the Sun. Aphelion. Distance 94,456,900 miles.

July 15. Jupiter in Opposition. Least distance from the Earth (July 16) 384,190,000 miles.

July 17. 21h. Mars in conjunction with ♃. ♂ 7°S. Occultation. See p. 171.

July 22. 21h. Jupiter in conjunction with ♃. ♃ 4°S.

July 28. 16h. Saturn in conjunction with ♃. h 8°S.

Meteors of the Perseid stream begin to appear in July.

In this month the Mornings decrease 34m., and the Afternoons 30m.

Constellations near the S. meridian at midnight: Hercules, Ophiuchus, Serpens, Lyra, Cygnus, Aquila, Delphinus, Equuleus, Aquarius, Capricornus, Sagittarius.

APPARENT RIGHT ASCENSION AND DECLINATION OF THE PLANETS AT NOON.

Continued from p. 133.]

feasible. Mercury will be in Inferior conjunction at 10h. 57m. in the morning of May 11 this year, when its path will be sensibly tangent to the solar disc, and by displacement due to position of the observer, it will be within for some parts of the Earth and placed outside for others by a small distance, and it is said that a transit will not be seen from places north of 26° N. latitude (about). Obviously, a transit will not be visible from places where the Sun is not above the horizon at the time, which cause limit the places of observation to those given on page 170.

Colour.—Continued from p. 137.] exhibiting special preference for none is, in technical language, a black body, or perfect radiator, and its temperature can be determined from the proportions in which the different colours occur in its spectrum. In modern astrophysics the temperatures of stars are found from their colour by supposing that they are black bodies, and the temperature found in this way is called the colour temperature. ("A Key to the Stars."—WOOLLEY).

## MORNING AND EVENING STARS.

☿ MERCURY is a morning star in the first week of the month and then an evening star until its end, but in neither case will it be visible as a naked eye object.

♀ VENUS rises unusually early and is conspicuous in the early morning sky. It passes between Aldebaran and the Pleiades about the 14th. Magnitude -3.9 to -3.7.

♂ MARS, which is still a bright object, will be seen low in the south to south-west in the late evening. Mag. -1.1 to -0.6.

♃ JUPITER being in Opposition on the 15th is due south about midnight and may be seen low down throughout the night, with Altair high above. Magnitude -2.3.

♄ SATURN is to be seen at midnight fairly high in the sky in the south-east below and to the right of the square of Pegasus.

**Modern Spectroscopy.**—A refinement of modern astronomical observation is the study of the "contours" of spectrum lines—that is, the distribution of intensity across a line. No line is perfectly monochromatic; even the sharpest line is really a very short patch of continuous spectrum with a maximum intensity at a certain wave-length and a falling off of intensity at a definite rate on either side. Instruments known as "microphotometers" are now available for recording the intensity at each wave-length in a line. It appears that the total breadth, the ratio of intensity at specific points, and the degree and kind of asymmetry of the lines are all important criteria of particular physical conditions—such

- Perigee 3d. 4'oh. 227,720 miles.
- Apogee 15d. 3'oh. 251,140 "
- Perigee 29d. 3'oh. 229,820 "

Mean Longitude of Asc. Node, August 1, 252° 19'.

RAINFELL AT GREENWICH IN AUGUST, 1935,  
on 9 days; total fall 0.56 inch; below the  
average by 1.53 inches.

See note on Summer Time on p. 130.

## MONTHLY NOTES.

- August 1. Lammas—Scottish Term Day.
- 2. Bank and General Holiday.
- 5. Oyster season opens.
- 6 to 11. Buchan's "5th Cold Period."
- 11. Half-Quarter Day.
- 12. Grouse shooting begins
- 12 to 15. Buchan's "and Warm Period."

Configurations of Jupiter's Satellites at 22h. om. (See p. 116.)

## CONJUNCTIONS, ECLIPSES, AND OTHER CELESTIAL PHENOMENA.

August 1. Day breaks at 1h. 28m. Civil twilight ends at 20h. 44m. Night begins, 22h. 43m. The length of the day is 15h. 22m.

Aug. 3, 9h. Venus in conjunction with  $\delta$ .  $\delta$  0° 8' S. Occultation. See p. 171.

Aug. 8, 16h. Mercury in conjunction with  $\gamma$ .  $\gamma$  5° N.

Aug. 15, 2h. Mars in conjunction with  $\delta$ .  $\delta$  2° S.

Aug. 18. Mercury at greatest elongation. 27° E.

Aug. 18, 23h. Jupiter in conjunction with  $\delta$ .  $\delta$  3° S.

Aug. 24, 20h. Saturn in conjunction with  $\delta$ .  $\delta$  8° S.

Aug. 29 morn. Occultation of 53 Tauri, mag. 5.4, by the Moon. See p. 171.

Aug. 30 morn. Occultation of  $\alpha$  Tauri, mag. 4.8, by the Moon. See p. 171.

Meteors of the Perseid stream are expected this month, the nights of most abundance being from the 10th to the 12th. As the Moon will be then between New and First quarter, it will be little hindrance to their visibility.

In this month the Mornings decrease 47m., and the Afternoons 59m.

Continued from p. 141.]

as the total number of atoms in the atmosphere engaged in absorbing the lines, and the rotation of the star on its axis—phenomena quite beyond other means of investigation.

In his report of 1936 the Astronomer Royal mentions the successful application of the Spectroheliograph at Greenwich to the measurement of intensities and contours of the lines in the spectrum of the Sun and to the use of this instrument in the study of sudden bright eruptions.

**The Standard of Length.**—The units of mass, space and time on which the whole of metrical science is founded are selected arbitrarily and quite independently of one another. There has long been a feeling that the standards chosen should be such as to permit accurate reproduction in case

of accident, and of the three standards, that of length is in most need of stabilization. The standard metre at Paris, and the British Imperial Standard Yard are simply metal bars and are therefore at the mercy of physical changes which, in the course of time, must inevitably occur to material things. The wave-length of a chosen spectrum line, however, is free from this subjection, and the comparison of a material standard with a light wave is found to be possible, one of the most delicate of physical experiments. The red line of cadmium has, for various reasons, always been chosen for the measurement, and in 1893 Michelson made the first comparison between the length of this light wave and that of the standard metre.

CONJUNCTIONS, ECLIPSES, AND OTHER CELESTIAL PHENOMENA.

September 1. Day breaks at 3h. 6m. Civil twilight ends at 19h. 34m. Night begins 20h. 54m. The length of the Day is 13h. 33m.

Sept. 2. 3h. Venus in conjunction with D. ♀ 4° N.

Sept. 6. 5h. Mercury in conjunction with D. ♀ 0° 5' N.

Sept. 12. 18h. Mars in conjunction with D. ♂ 3° S.

Sept. 14. Mercury in Inferior conjunction.

Sept. 14. aft. Occultation of Sagittarii, mag. 3.6 and 36 Sagittarii, mag. 5.1 by the moon. See p. 171.

Sept. 15. 6h. Jupiter in conjunction with D. ♀ 2° 5' S.

Sept. 21. 1h. Saturn in conjunction with D. ♀ 8° S.

Sept. 23. 11h. Sun enters the sign Libra (Equinox).

Sept. 24. Venus and Regulus in conjunction. ♀ 0.3 N.

Sept. 25. Saturn in Opposition Least distance from Earth 791,125,000 miles.

Sept. 30. Mercury at greatest elongation. 18 W.

In this month the Mornings decrease 47m.; the Afternoons, 1h. 7m.

Constellations near the S. meridian at 22h.: Lyra, Cygnus, Aquila, Delphinus, Aquarius, Capricornus, Equuleus, Pegasus, Pisces.

Sept. 15. Uranus rises 19h. 41m., sets 10h. 30m. Neptune rises 5h. 14m., sets 18h. 14m.

Harvest Moon.—It will be seen in the table above that the differences in the time of moon-rise on successive days—the daily retardation as it is called—is about 22 minutes from the 17th of the 21st, and that this is the smallest retardation during the month. It is also about the time of Full Moon, when the Moon rises near Sunset, and these circumstances combine to cause an apparent lengthening of the day that is supposed to be useful for agricultural purposes, and so led to the expression Harvest Moon. The small daily retardation results from a small inclination of the orbit of the Moon as it rises to the horizon which happens at some time in every month but in September that time happens to be Full Moon. The inclination and, therefore the retardation, varies with the place, being small in northern latitudes and in latitude 20° N. the minimum retardation this September is 40 minutes. There is also a difference with the date and when the longitude of the Asc. Node is about 0° the daily retardation in the latitude of Greenwich is as small as 9 or 10 minutes. At the present time it is fairly large (see p. 146).

Time of High Water at the undermentioned Places—

**The Thermionic Valve.**—In Marconi's system of wireless telegraphy, the electric waves are generated by creating powerful vibratory currents of electricity in an aerial wire. The electric oscillations in this wire produce in surrounding space an electric wave which travels outwards with the speed of light, namely, 186,000 miles per second. When these waves cut across another similar wire, a receiving aerial, they create in it feeble electric vibrations of the same type. If means could be found of converting the very rapid alternating movements of electricity in the receiving circuits into a uniform motion of electricity in one direction, it would be possible to detect the

emitted electric waves by the use of a telephone or galvanometer as in ordinary telegraphy.

Mean Longitude of Asc. Node, October 1, 249° 5'.

RAIN FELL AT GREENWICH IN OCT. 1935,  
on 16 days; total fall, 2' 55 inches; above the  
average by 0' 02 inch.

## MONTHLY NOTES.

October 1. Latest day for receiving corrections for next year's "WHITAKER."—County Quarter Sessions to be held within the period of 21 days immediately preceding or immediately following Sept. 29 last.—Pheasant shooting begins.

3. \*Summer Time ends. Also in France and Belgium.

12. Fire Insurances must be paid; Feast of Tabernacles; Hunter's Moon.

19. Hunter's Moon.

24. Borough Councillors to be nominated.

29. Turkish National Holiday.

Oct. 15. Sun's semidiam. in Transit. 1m. 4.98s. of Mean Time.

Conjunction of Mars and Jupiter. — Mars makes a circuit of the heavens with respect to the Earth as centre in a period (called synodic) of 780 (mean) days, which includes a period of about 70 days during which it is retrograding. Jupiter moves through a comparatively small distance in the sky in that time, and the two planets Mars and Jupiter are in line with the Earth at intervals of rather more than 800 days, though in some circumstances connected with the regression the interval may be much longer. Dates of previous conjunction of Mars and Jupiter, with the intervals between them, have been 1926 April 23 (802), 1928 July 3 (816), 1930 Sept. 27 (817), 1933 June 4 (814), 1935 Aug. 27 (794), 1937 Oct. 29.

## CONJUNCTIONS, ECLIPSES, AND OTHER CELESTIAL PHENOMENA.

October 1. Day breaks at 4h. 7m. Civil twilight ends at 18h. 21m. Night begins, 19h. 29m. The length of the Day is 11h. 36m.

Oct. 2, 4h. Venus in conjunction with ☽. ♀ 7' N.

Oct. 3, 6h. Mercury in conjunction with ☽. ♀ 7' N.

Oct. 11, 18h. Mars in conjunction with ☽. ♂ 5' S.

Oct. 12, 17h. Jupiter in conjunction with ☽. ♀ 4' S.

Oct. 18, 8h. Saturn in conjunction with ☽. ♀ 8' S.

Oct. 21, aft. Occultation of 13 Tauri, mag. 5.5, by the Moon. See p. 171.

Oct. 29, 17h. Mars and Jupiter in conjunction. ♂ 15' S.

In this month the Mornings decrease 52m., and the Afternoons 1h. 31m.

The Zodiacal light may be seen before dawn in the first part of this month, on days when the Moon is absent.

Constellations near the S. meridian at 22h.: Delphinus, Equuleus, Aquarius, Capricornus, Pegasus, Andromeda, Pisces, Piscis Australis, Cetus.

## MORNING AND EVENING STARS.

☿ MERCURY was at greatest western elongation on September 30th and rises before the Sun almost throughout October. It may be seen at 5 o'clock in the morning in the first week a few degrees above the western horizon.

♀ VENUS, continues to rise later as the year proceeds but may still be seen in the East before dawn.

♂ MARS remains in the evening sky, as in September the time of setting being slightly earlier. It moves through Sagittarius and will be seen a degree below Jupiter on the 29th. Mag. +0.3 to +0.6.

♃ JUPITER may be seen low in the sky west of south in the twilight and sets in the late evening. Magnitude -1.9.

♄ SATURN will be in the south-east in the late evening. May +0.7 to +0.9.

31	15 33	21 22	3 11

Continued from p. 149.]

In 1904 Professor Fleming, using an effect discovered by Edison twenty years earlier, but had been then thought to be merely of academic interest, devised an apparatus that consisted essentially of a metal cylinder, called the anode, around the filament inside the vacuum bulb of an electric lamp that would "rectify" and therefore detect these feeble high frequency oscillations. This apparatus, known at first as an oscillation valve, and afterwards as a thermionic valve, has been elaborated in various ways, to make it effective as a transmitter and amplifier, and has made wireless telephony and its development as broadcasting a practical feat in life.

CONJUNCTIONS, ECLIPSES, AND OTHER CELESTIAL PHENOMENA.

November 1. Day breaks at 4<sup>h</sup> 59<sup>m</sup> civil twilight ends at 17<sup>h</sup> 19<sup>m</sup>. Night begins 18<sup>h</sup> 28<sup>m</sup>. The length of the Day is 9<sup>h</sup> 38<sup>m</sup>.

Nov. 1, 8A. Venus in conjunction with  $\gamma$  6<sup>o</sup> N.

Nov. 4. Uranus in opposition. Least distance from the earth 1,740,540,000 miles.

Nov. 9, 7<sup>h</sup>. Jupiter in conjunction with  $\gamma$  4 8.

Nov. 9, 21<sup>h</sup>. Mars in conjunction with  $\delta$  3 6'S.

Nov. 13. Occultation of  $\kappa$  Piscium, mag. 4.9 by the Moon. See p. 171.

Nov. 14, 26<sup>h</sup>. Saturn in conjunction with  $\delta$  1 8'S.

Nov. 18. Partial Eclipse of the Moon. Invisible at Greenwich. See p. 170.

Nov. 20. morn. Occultation of  $\zeta$  Tauri, mag. 3.0 by the Moon. See p. 171.

Nov. 21, morn. Occultation of  $\gamma$  Gemmorum, mag. 4.1, by the Moon. See p. 171.

In this month the Mornings decrease 50<sup>m</sup>.; the Afternoons 38<sup>m</sup>.

Constellations near the S. meridian at 22<sup>h</sup>.: Pegasus, Pisces, Cetus, Andromeda, Aries, Perseus, Taurus.

**Haze, Mist and Fog.** Perfectly pure air is almost completely transparent to visual light waves and if the air were always pure we should see distant objects through it almost as clearly as through a vacuum. But there are always particles of foreign matter present and when loaded with water they cause obscurity of the atmosphere. If the temperature falls below the dewpoint these hygroscopic particles form excellent nuclei for condensation, and relatively large amounts of water are deposited for small falls of temperature and the obscurity changes from that of haze to that of mist. The process of the formation of haze and mist is continuous, but they are fundamentally different, for haze owes its origin to foreign matter and a small amount of associated water, while mist is due to an actual precipitation of water from vapour to liquid.

## MORNING AND EVENING STARS.

☿ MERCURY having been at Superior conjunction on October 29th set shortly after the Sun and will not be visible this month.

♀ VENUS now rises nearly at daybreak and is to be seen in the brightening sky south-east. It moves from Virgo into Libra passing Spica on the 5th.

♂ MARS remains in the evening sky as last month. The time of setting becomes later by a few minutes because the planet moves into Capricornus and therefore northward. Mag. + 0.6 to + 0.8.

♃ JUPITER will be conspicuous low down west of south in the twilight. Its distance from Mars on its left increases.

♄ SATURN in the preceding part of Pisces will be in the south in mid evening. Mag. + 0.9 to + 1.1.

## SATURN ♄

There is no fundamental difference between mist and fog; in most cases fog is only a dense mist, and the density at which mist becomes fog is a matter of definition. The total abolition of smoke from London would not reduce the occasions on which mist and fog occur, but many fogs would remain mists, and we should never have a "London particular." The fogs of London are caused almost entirely by loss of heat from the lower layers of the atmosphere into a clear sky above. The air radiates its heat, its temperature falls and condensation takes place. (Dr. G. C. Simpson, F.R.S.)

Mean Longitude of Asc. Node, Dec. 1, 245° 51'.

RAIN FELL AT GREENWICH IN DEC., 1935,  
on 20 days; total fall, 2' 45 inches; above the  
average by 0' 19 inch.

## MONTHLY NOTES.

- Dec. 3 to 9. Buchan's "3rd Warm Period."  
15. Last day for renewing Solicitors' certificates.  
- Notices to owners and occupiers affected  
by private Bills in Parliament must be delivered.  
21. Common Council elections.  
22. Shortest Day.  
25. Quarter Day.  
- Quarter Sessions to be held within the  
period of 21 days immediately preceding or  
immediately following Dec. 25.  
27. Bank and General Holiday.  
31. Various Licences expire.

## CONJUNCTIONS, ECLIPSES, AND OTHER CELESTIAL PHENOMENA.

December 1. Day breaks at 5h. 42m. Civil twilight ends 16h. 45m. Night begins 17h. 57m. The length of the Day is 8h. 8m.

From Dec. 18 to 25 the length of the Day is about 7h. 46m.

Dec. 1, 14h. Venus in conjunction with  $\Delta$ .  $\eta$  2' N.

Dec. 2, 23h. Annular Eclipse of the Sun. Invisible at Greenwich.

See p. 170.

Dec. 4, 17h. Mercury in conjunction with  $\Delta$ .  $\eta$  5' S.

Dec. 7. oh. Jupiter in conjunction with  $\Delta$ .  $\eta$  5' S.

Dec. 9. oh. Mars in conjunction with  $\Delta$ .  $\delta$  7° S.

Dec. 12. Mercury at greatest elongation.  $21^\circ$  E.

Dec. 12, 1h. Saturn in conjunction with  $\Delta$ .  $\eta$  8' S.

Dec. 20, aft. Occultation of 60 Cancri, mag. 5.7, by the Moon.

See p. 171.

Dec. 21, morn. Occultation of 60 Cancri, mag. 5.1, by the Moon.

See p. 171.

Dec. 22, 6h. Sun enters the sign Capricornus. (Solstice.)

In this month the Mornings decrease 23m., the decrease being continuous throughout the month.

The Afternoons decrease 4m. up to the 13th, and then increase 9m.

Constellations near the S. meridian at 22 h., Andromeda, Triangulum, Aries, Cetus, Perseus, Taurus, Eridanus, Auriga, Orion.

Dec. 14. Sun's semi-diam. in Transit,  $m. 10^{\circ} 87s$ . of Mean Time.

Dec. 14. Uranus rises 13h. 37m., sets 4h. 14m. Neptune rises 23h. 30m., sets 12h. 21m.

## Types of Variable Stars. (See opposite page.)

New or temporary Stars: Nova Lacertae. Nova-like variables T. Pyxidis.

Long period: Mira Ceti: Range of several magnitudes. Period 100 to 600 days.

Short period: Algol: Eclipsing stars, very regular periods; generally a few days.

RCorone stars: At constant maximum, with occasional sharp minima.

UGeminorum stars: At constant minimum, with occasional sharp maxima.

Long period Cepheids:  $\delta$  Cephei Regular periods of 1 to 45 days. Range  $1\frac{1}{2}$  magnitude.

Short period Cepheids: RR Lyrae: Regular periods less than 1 day. Range about 1 magnitude.

$\mu$  Cephei stars: Red Stars, with irregular small variations.

RV Tauri: A secondary minimum occurs between successive minima.

Time of High Water at the undermentioned Places —

MORNING AND EVENING STARS.

☿ MERCURY is an evening star, being at greatest eastern elongation on December 12th, but at this time of year that circumstance does not imply visibility, and it is not likely to be seen.

♀ VENUS is approaching Superior conjunction with the Sun and may be seen in the late dawn in the early part of this month. Magnitude — 3.4.

♂ MARS is still in the early evening sky, setting later daily. (See note of last month.) It moves from Capricornus into Aquarius. Magnitude + 0.8 to + 1.1.

♃ JUPITER will still be above the horizon for at least two hours after sunset. Magnitude — 1.5.

♄ SATURN is still to be seen in the western sky during the first part of the night. The apparent breadth of the ring system is less than 2", and the Sun's altitude with respect to the ring-plane 5°. Magnitude + 1.2.

Variable Stars. — At least fifty of the stars visible from the northern hemisphere with unaided eye undergo variations in their light. With fieldglasses or a small telescope this number is enormously increased. The variation of brightness is in general periodic, but the periodicity may not be regular, and if represented by a curve, the curve may not be uniform and its successive waves may be dissimilar. The detection and study of these irregularities make this branch of astronomy of peculiar interest. There is no known reason for variation except that in some cases it is believed that the star is binary or may have more than two components, and that the variation is due to the covering of one star by a companion. A classification (Ludendorff's) is given on the opposite page with examples. Some of the classes are known by the name of a typical star.

eclipse on May 29 w  
The partial solar ec  
be seen from the n  
In 1938 Mercury  
the end of March, t  
Venus will be an  
October, and in th  
Jupiter will be in  
early in October.

In the year 1938 there will be two eclipses of the Moon, both being Total, and two eclipses of the Sun, one being Total, the other Partial. Of the four, one only, a total eclipse of the Moon in the evening of November 7, will be visible from Greenwich. The lunar eclipse on May 14 will be visible from the Atlantic Ocean, America and the Pacific. The central line of a total solar

eclipse on May 29 will lie wholly in the Southern Ocean. The partial solar eclipse on November 21-22 G. M. T. will be seen from the region of the North Pacific Ocean.

In 1938 Mercury may be seen as an evening star at the end of March, and as a morning star in September. Venus will be an evening star from April until October, and in the early morning sky in December. Jupiter will be in opposition in August and Saturn early in October.

THE TIME OF HIGH WATER at the undermentioned Ports and Places may be approximately found by taking the appropriate Time of High Water at the Standard Port (as shown on pp. 117, 121, etc.) and adding thereto the quantities annexed. The time thus found will be Greenwich Time for British, Irish, French and Belgian Ports, and Amsterdam Time for Netherlands Ports. The rise of the tide at Springs and Neaps is given in the last two columns. An\* denotes Range of Tide.

EXAMPLE.—Required times of high water at Aberdeen on February 17th, 1937.—

(a) Morning Tide.

Appropriate time of high water at *Leith* ..... 6h. 18m. Aft. Feb. 16.  
Add tide interval ..... 10 53

Sum.....17 11  
Subtract 12h.....12 0

Time of high water at Aberdeen, February 17th ..... 5 21 Morn.

(b) Afternoon Tide.

Appropriate times of high water at *Leith* ..... 6h. 46m. Morn. Feb. 17.  
Add tide interval ..... 10 53

Sum.....17 39  
Subtract 12h.....12 0

Time of high water at Aberdeen, February 17th ..... 5 39 Aft.

# 166 Tables for Finding the Times of Sunrise and Sunset.

THIS double entry table provides the means for finding, with sufficient accuracy for practical purposes, the times of sunrise and sunset at any place situated between latitude 60° N. and 60° S.

To use the table: In the horizontal line with the Sun's declination in the first column, and under the required latitude in the heading, there will be found figures which added to *z.h.* give the *local apparent time* of sunset. Subtracting these quantities from *z.h.* will give the *local apparent time* of sunrise. To obtain from this the *local mean time*, the equation of time for the day in question which is given on the second page of each month, must be added to or subtracted from these apparent times of sunrise and sunset, as shown in the heading.

To find the corresponding Greenwich mean time, the difference of longitude of the place from Greenwich must be added if the place be West, subtracted if East.

The table is arranged for northern latitudes, but will serve equally well for places south of the Equator, if the declination North in the first column be considered South, and *vice versa*.

If the figures are required for a declination or latitude falling between two arguments of the table, they may be found by proportion. The effect of refraction is included.

## THE TIME OF SUNSET.

The times of sunrise and sunset given in this Almanack (and similarly of moonrise and moonset) are the times when the centre of the Sun's disc is seen on the horizon from sea-level at Greenwich, computed on the assumption that the horizontal refraction is  $34\frac{1}{2}'$ . It is doubtful whether there is a precise legal definition of sunrise and sunset. The above has generally been adopted as a correct statement, though in some Tables the instant when the upper limb, or edge,

of the Sun is on the visible horizon is given as the time when the Sun rises and sets. The legal question has been more concerned with the distinction between local sunset and Greenwich sunset, rather than with a precise

definition. It has been held by a legal tribunal, as would be expected, that the word "sunset" in laws and regulations must be taken to mean the time when the sun sets at the place in question, whether it be stated in local or Greenwich time.

TO FIND THE GREENWICH TIME OF SUNRISE AT CERTAIN PLACES IN THE BRITISH ISLES IN EACH MONTH OF THE YEAR.

The Table gives the number of minutes to be added to or subtracted from the time of sunrise at Greenwich, to find the Greenwich time of sunrise at the place named in the first column, on the first day of each month. The corrections to be applied on other dates and for other places in the neighbourhood of these may be inferred approximately by interpolation.

The sign + means that the time required is later than that at Greenwich. The sign -, that it is earlier.

If these Tables be considered in conjunction with a map it will be seen that the places at which the Sun rises at the same moment lie in a slightly curved line across the map, the lines for different moments being approximately parallel. The lines change their inclination to the meridian throughout the year. Similarly for the setting.

The corrections in this Table are to be applied with the signs given. The final result is not to be diminished by 1' as directed in previous tables of this kind.

## Celestial Phenomena for Observation in 1937.

## ECLIPSES.

IN the year 1937 there will be three eclipses, two of the Sun and one of the Moon. One of the solar eclipses will be total, the other annular. The lunar eclipse will be partial. None of the three will be visible at Greenwich.

I. A *Total Eclipse of the Sun* on June 8. The path from which totality may be seen lies almost wholly in the Pacific Ocean. It begins its course in longitude  $170^{\circ}$  E. of Greenwich, latitude  $12^{\circ}$  S., travels in a north-easterly direction to a point in longitude  $130^{\circ}$  W., latitude  $10^{\circ}$  N., where the duration of totality on the central line will be 7 mins. 4 secs., which is unusually large, but not quite the greatest possible value, and ends its course within the western shore of South America in  $10^{\circ}$  S. latitude, north of Lima. Islands of the Phoenix group, where the eclipse will happen not long after sunrise, and totality will last about 4 minutes, are within the path, and Fanning Island and Christmas Island are near its limits north and south respectively. Central eclipse begins June 8d. 19h. 0m. and ends 8d. 22h. 21m. G.M.T. A partial eclipse will be seen from Central America, Mexico, California and the West Indian Islands, and from Wellington, New Zealand, where the Sun will rise in partial eclipse.

II. A *Partial Eclipse of the Moon* in the morning of November 18 (Greenwich). Only 0.15 of the Moon's diameter will be obscured at greatest eclipse. The beginning will be visible from the extreme northern and north-western part of Europe, part of the British Isles, but not including Greenwich, the North Atlantic Ocean, North and South America and the Pacific Ocean; the end from the same regions, excepting the eastern part of the Atlantic Ocean and places to the east of this, and adding part of Australia. The Moon enters the umbra November 18d. 7h. 37m.; leaves umbra 18d. 9h. 0m. G.M.T.

III. An *Annular Eclipse of the Sun* Decem-

ber 2-3. The path from which an annular eclipse may be seen lies wholly in the Pacific Ocean. It begins its course in a region about longitude  $150^{\circ}$  E., latitude  $20^{\circ}$  N., moves in a south-easterly direction to longitude  $170^{\circ}$  W., latitude  $4^{\circ}$  N., where on the central line the annularity will last 12 minutes, which is about half a minute less than the possible maximum duration. Washington Island and Fanning Islands are within the path of annularity. A small partial eclipse will be seen from New Guinea. Central eclipse begins December 2d. 21h. 18m., ends 3d. 0h. 52m. G.M.T.

There will be a *Partial Transit of Mercury* across the Sun's disc on May 11. Invisible at Greenwich. The ingress and egress will be visible generally over Southern Asia, the Philippine Islands, Western Australia, the Indian Ocean and Central and Southern Africa.

The above is a list of stars, chosen within certain limits based on magnitude, altitude of the Star and of the Sun, and phase of the Moon, that will be occulted during the year, with the time of the phase of the occultation that is mentioned as seen from Greenwich, and in the adjacent column (Edin.) the time (minutes only) as seen from Edinburgh. It may happen that this is not given because (1) the Star is not occulted as seen from Edinburgh; (2) it is below the chosen limit of altitude; or (3) the sun is above the specified limit. Alternatively the time as seen from Greenwich may not be given for like reasons. In general the phase is that which takes place at the dark limb, but both phases of the occultation of ζ Tauri on Nov. 20 are given because it is a bright star that may be seen at the illuminated edge, also of Mars and Venus, which are each seen from one place only. The "angle from N. point" shows the place of disappearance or reappearance on the Moon's edge, and is measured from the point nearest the Pole of the heavens (*not* the highest point) towards the east. Occultation of Mars on July 17 will be seen from the N. Atlantic, N.W. Africa and Western Europe, including Edinburgh and Scotland generally, where the occultation will be seen at a small altitude. The southern limit for the occultation of Venus on August 3 passes across England, and the phenomenon will be visible as far South as Cumberland, Westmorland and North Yorkshire but not in South Lancashire or South Yorkshire.

End of the year, the eclipses take place on the eastern side of the planet; from the beginning of the year until opposition on the western. In the latter period, i.e. from Jan. 1 to July 15, satellites I and II disappear by eclipse and reappear from occultation at the eastern edge. The times of such reappearances (O. R.) are given, the satellite and the time of its disappearance being in the *preceding* line. After July 15 the converse happens, and the times of disappearance (O. D.) and of reappearance after eclipse, the satellite being named in the second line. Near opposition this pertains to satellite III as well as to I and II as appears on July 8. Though satellite IV moves in a plane which, like that of the other satellites, is but little inclined to the plane of Jupiter's orbit, because of its greater distance from the planet, in some circumstances it escapes and does not enter the shadow thrown by Jupiter and is not eclipsed. This happens in alternate periods of about three years, and a period of non-eclipse has lately ended. Phenomena of satellite IV therefore appear again in the list (April 17, June 23, Sept. 14, &c.), and time observations of these are of importance.

The position of a star is defined by its Right Ascension and Declination, which are co-ordinates analogous to longitude and latitude on the terrestrial sphere. The lines of reference on the celestial sphere depend on the position of the axis of the Earth, and since, for reasons known generally by the word Precession, this position has a continual small movement with respect to the stars, Right Ascension and Declination change annually by an amount that can be computed by formula. Observation of position of the stars shows that they do not conform precisely to this computed precessional change, and the outstanding amount for individual stars known as Proper Motion (see page 177), is shown in two columns of the adjoining table. The annual precession and Proper Motion combined, or the amount by which each element of a star's position changes in a year, known as the Variation is also shown. The angular parallax of a star is the angle that the mean radius of the Earth's orbit would, placed squarely, subtend at the star, and is therefore inversely proportional to its distance, and hence is a measure of that distance. The parallaxes in the adjoining table are mainly trigonometric (see p. 177) and are taken from the General Catalogue of Parallaxes collected by Dr. Frank Schlesinger of Yale. The entry 000 indicates that the star is

especially distant, and for some few stars no value is available. The last column shows the distance from the Sun in parsecs corresponding to the

parallax (see p. 177). Sirius and Procyon have faint companions, Castor, ζ Herculis, and γ Virginis and α Centauri are binary stars, ε Hydrae is a multiple system, and of these the place given is either that of the centre of gravity or of the mean star.

These tables give Mean places on Jan. 1. The position on any other day differs from this because of Precession, Nutation, Aberration and Proper Motion. The Mean place with these effects added is called the Apparent place, and for the purposes of navigation and surveying it is the Apparent place that is required.

THE objects of the sky, Sun, Moon, Planets, Stars, appear to us to be fixed on the interior surface of a hemisphere of which the observer is the centre. Actually the various classes of objects are at very different distances. The Moon, our nearest neighbour, is 240,000 miles from us; a distance which light, travelling at the rate of 186,000 miles a second, traverses in less than a second and a half. Of the bodies of the Universe whose distance is known, the farthest is so remote that its light takes perhaps 100,000,000 years to reach us. The nearest star to the Sun is more than eight thousand times as far from it as is the planet Neptune. It is the purpose of modern astronomy to investigate the method of distribution of these bodies in space, their movements and their sizes. Cosmical Physics attempts to deduce their physical nature, and that of cosmical matter in general from the observations of the astronomer, combined with knowledge gained in the laboratory, for the purpose of elucidating their past and future history. The total number of stars of magnitude 6<sup>o</sup> and brighter, which is sometimes taken as the limit of naked-eye visibility, is about 4,300, of which 3,000 are visible during the year from latitude 60°, but a more generous estimate, which includes the cases when two faint stars close together are seen as one, sets the whole number at 10,000. By the aid of the photographic plate objects are detected and recorded which no eye can see, even with the best optical aid, and from counts on such plates estimates have been made of the whole number of stars existing. 2,000,000,000 was once assigned as a limit to their number, but this has been much increased by various estimates. 50,000 millions may be taken as the possible total number of stars in the galactic system (*v. infra*), though twice that number has been mentioned as a reasoned estimate. The number in the whole of space is incalculable.

#### THE STRUCTURE OF THE UNIVERSE.

The stars as seen are classed according to their apparent brightness and down to the 6th or 10th magnitude the number of each magnitude is known, all to this order having been catalogued. For fainter stars the numbers have been derived from counts in sample areas. If the Universe is an aggregation of stars in which the individuals of each degree of intrinsic brightness are distributed uniformly throughout an endless space, it can be shown that the number of stars brighter than the 4th magnitude would be about four times as great as the number brighter than the 3rd; the number brighter than the 5th would be greater than the number of those brighter than the 4th in the same ratio, and so on indefinitely. When the numbers of stars of different magnitudes obtained by counts are compared, it is found that in the case of the brighter stars this star-ratio, as it is called, approaches but does not attain the theoretical value 3.98, and that the ratio decreases continually as the stars are fainter, until at the 16th magnitude it is only about two. The explanation of this observed fact is that the universe of stars accessible to vision is limited; either there are few or no stars beyond a somewhat indefinite boundary, or we are prevented from seeing them by absorbing material distributed throughout interstellar space.

It is established from counts and measured distances that around our Sun the stars are fairly uniformly distributed at the rate of about one

per 20 cubic parsecs. It is obvious that a uniform distribution of this nature cannot go on indefinitely, for, if it did, the background of the firmament would be bright, since in whatever direction we looked we should, in time, come to a star.

To a casual glance it is clear that the stars are not uniformly distributed over the sky, but have a tendency to congregate near the great belt of cloud-like forms which encircle the heavens, known as the Milky Way or Galaxy. Applying the method of sounding by "star ratios" above outlined, it is found that the stars appear to thin out less rapidly as we go out in the plane of the Milky Way than they do in the direction of the galactic poles. The deduction is apparent; the boundaries of the stellar system are more distant in the plane of the Galaxy than they are at the poles. In other words, the stellar system is an extremely flattened organisation, whose general form is, roughly, that of a double convex lens or of a watch. Looking along the galactic plane we find the stars crowding together, as we should expect, since this is the direction of greatest extension, and the Milky Way is therefore largely a depth effect. But examination of its prominent features, the great star-clouds, the irregularities in its form, and the deep rifts in its structure, shows that its appearance is not wholly due to depth, and that the region is the home of bodies and masses other than uniformly distributed stars. This aggregation is known as the Galactic System; it has been called the Stellar Universe, or the Universe, but the name is scarcely well chosen because, as will be seen below, there are other aggregations which make this system merely a unit in an immense number of such denizens of space.

Statistical study of the brighter stars has led to a view that they form a local group which comprises our Sun, and is of the shape, generally, as the larger system spoken of, but with their fundamental planes slightly incline done to the other, which has led to a suggestion of the existence of similar systems, all lying more or less in the Galactic plane that are seen as star clouds in the Milky Way. But this plausible theory is not now accepted by all.

Seen in and about the Milky Way are irregular nebulae (*see p. 178*), of which the nebula in Orion is one of the most remarkable, that are found to be comparatively near objects and are to be considered as within the Galaxy. But besides these there are nebulae of another type that are not seen about our central Galactic plane and are thought to be very distant from our Sun. Viewed with a powerful telescope these are resolved into spots of light believed to be stars. There are known to be masses of dark nebulosity in space that appear as rifts in the Milky Way obscuring the stars behind, and it has been suggested that the absence of these nebulae from the region of the Galaxy is due to this cause. Such nebulae were called by William Herschel "Island Universes." They are now more often called extra-galactic nebulae, and being, to some degree, of the same shape as, and bearing other resemblance to, our own galactic system, are believed to be similar systems perhaps in course of making. The clouds of Magellan, the nearest of the external galaxies, is estimated to be about 100,000 light years from us, the most distant has been found to be perhaps 140 million.

The following summary of present day ideas

## THIRTY NEAR STARS.

$\alpha^2$  Centauri is the brighter of the two stars seen as one by naked eye, the other being of magnitude 1.7; they have a faint companion, Proxima, which is about the same distance from the Sun. An \* indicates that the star is double, the brighter component being here noted. The nearness to us of the second star in the list, sometimes known as Barnard's Star, was recognised from its large annual proper motion of more than 10 seconds. Cord. 5h. 243 has a P.M. of 8".70, which led to investigation of its distance, as has happened in the case of other stars.

is given by an authority with the reservation that the figures though in accordance with the most recent results obtained are not to be considered as final.

We have a great central disc of stars distributed in an irregular manner in groups or clusters, with possibly a spiral arrangement like the Andromeda Nebula. It is maintained in its flattened form by rotation which is controlled by the gravitation of the whole system, the mass of this being 160,000 million times that of the Sun. The total mass of all the stars in the system is not more than half this so the other half is due to the diffuse absorbing matter. This system has an effective diameter of 100,000 light-years and its thickness near the centre where there is a great spheroidal enlargement is about 16,000 light-years. The thickness diminishes rapidly, and away from the centre the thickness is from 3,000 to 6,000 light-years. The centre of the system is in the direction towards the dense star clouds in Sagittarius at a distance of 30,000 light years from the Sun. The Sun is moving around this centre with a velocity of 170 miles a second and the greater the distance of a star from the centre, the slower is its velocity in analogy with the movement of the planets about the Sun. About ten per cent. of the mass of the Galaxy comprises long period M-type variables, cluster-type variables, and other high-velocity stars and the globular clusters. This makes up the galactic system, which is merely one among millions of such systems that make up the Universe.

It appears that the Andromeda Nebula which is nearly 900,000 light years away is comparable in size with our Galaxy.

## ROTATION OF THE GALAXY.

A hundred years ago the view was put forward by Madler, perhaps on insufficient evidence, that the Pleiades lies at the centre of the Milky

Way and that all the stars of the system revolve round that group as centre. Such a movement was considered doubtful, but within the last ten years the Rotation of the Galaxy has been accepted as a subject for precise research, the data on which it is based being the radial velocities of stars determined by the spectro-scope (see p. 177), and the result as mentioned above.

## EXPANSION OF THE UNIVERSE.

According to Doppler's principle (see p. 177) the spectra of a few of the distant extra-galactic nebulae show a motion of recession, the speed increasing with increasing distance. The speed may be taken roughly as 500 km. per sec. per megaparsec distance (see p. 177), at which rate they will double their distance from us every 1,400 million years.

This is taken in support of a conclusion drawn from advanced modern mathematics to the effect that the Universe is expanding, which is bound up with conceptions of space, and its limitations. These have not passed without philosophic and general discussion.

## STAR SPECTRA.

Most of the bright stars and many of the fainter have been examined with a spectroscope, and have been divided into classes according to their type of spectrum, the spectral types being named by the letters O, B, A, F, G, K, M, N. This sequence is very closely correlated with the colours of the stars, and hence, doubtless with their surface temperatures. The stars of the first two classes, O and B, have spectra characteristic of helium and hydrogen. Planetary nebulae, some stars known as Wolf-Rayet, in whose spectrum the chief lines are bright, and the bright stars of Orion generally

This Table, and that on p. 175, show that the nearer stars are not necessarily the brighter, nor are the apparently bright stars in all cases very bright intrinsically. The intrinsic brightness is shown in the last column of this Table. A star of Absolute Magnitude +5 emits as much light as our sun—one of Abs. Mag. 0, a hundred times as much; one of -5, ten thousand times. It will be seen from the Table on page 175 that the majority of the near stars are intrinsically faint. Two spectroscopic binaries—Plaskett's star, B.D. 6 1309, and Pearce's star, H.D. 1337, are believed to be the most massive and the intrinsically brightest stars known.

are in this group. Stars whose spectra range between A and F—it is to be remarked that there is no rigorous line of division between the classes and that there are subclasses and spectra noted as "peculiar"—are white or blue stars, and in their spectra broad absorption lines of hydrogen are conspicuous. In the next groups—F to G, and G to K—lines characteristic of metals appear, fine but numerous, and the stars of this class are yellow. The spectrum of our Sun falls late in the group F to G. The characteristic of the spectra of the remaining classes, M (and N), is the existence of a considerable number of flutings, and the stars are orange and red. Antares, Betelgeuse, and  $\alpha$  Herculis are notable stars in sub-classes of this type.

## THE SIZE OF THE STARS.

By the help of certain physical laws the rate of emission of energy per unit area of a star's surface can be deduced from the colour of the light that is emitted most profusely as shown by its spectrum. Since the whole luminosity is the total outpouring of energy, it is easy to understand that the area of the surface can be deduced, and hence the diameter of the star. Writing generally, the size of the majority of the stars estimated in this way is of the same order as that of our Sun, though some may be 20 times as large, others smaller in the same ratio. The bright red stars, of which there are not many, are giants that have diameters 200 times or more that of our Sun, but are not specially massive. There are a few stars of peculiar quality known as White Dwarfs that are much smaller, but of an amazing density and weight.

The angular diameters of large stars can be measured with an "interferometer," the active principle of which is the interference of light waves. If the distance of the star is known it is clear that its linear diameter can be deduced. The following are from recent measures at Mt.

Wilson. Antares is given as 200 million, but the parallax of this star is less certain than that of some other stars.

$\alpha$ Herculis .....	346 million miles
Betelgeuse (average) ..	216 " "
$\alpha$ Ceti .....	97 " "
$\epsilon$ Pegasi .....	86 " "
$\gamma$ Aquilae .....	43 " "
Aldebaran .....	34 " "
Arcturus .....	22 " "

## ABSOLUTE MAGNITUDE.

This phrase implies the luminosity of a star irrespective of its distance. Actually it is the number that expresses, according to the usual system of stellar magnitude, the brightness of the star as it would be if it were at the distance of 10 parsecs (parallax 0.1"). If the distance of a star is known, its absolute magnitude can be computed from its apparent, or, if the absolute and the apparent magnitudes are known, the distance of the star can be determined, the numerical relation between M the absolute and m the apparent magnitude being

$$M = m + 5 + 5 \log_{10} \pi,$$

where  $\pi$  is the decimal fraction of a second of arc that indicates the parallax of the star. (See pp. 172, 173.) Considerably more than 200 stars are now known whose absolute magnitudes are 10 or fainter, and 12 which are even fainter than 15. (See table and note above.)

## DISTANCE OF THE STARS.

The distance of the stars from us is so immense that its determination is a difficult problem, and it was not until nearly a century ago that there was any definite knowledge of the kind, and that was limited. The direct or trigonometric method of determination consists in measuring the minute difference of direction of the star as seen from different points in the

Earth's orbit, which is now usually done by photographing the star and its surroundings at appropriate epochs and measuring the change in relative position. This is now a staple work at several observatories and there has lately (1935) been published a list of the parallaxes of 217 stars determined at the Cape of Good Hope Observatory as a first instalment, a second series of 250 stars from Greenwich, completing a total of 516 determined at the Royal Observatory since 1913. The latest list from Mount Wilson brings the total from that Observatory to 390; there is a record of 300 from the observatory of Swarthmore College, and there are others. Making allowance for duplication in these lists there must now be considerably more than a thousand stars whose distances are known with some precision. A spectroscopic method of finding parallax through absolute magnitude by comparing the ratio of the intensity of certain pairs of lines in the spectrum which is believed to be a function of the absolute magnitude of the star has been evolved. A list of more than 4,000 stars, whose parallax has been determined in this way, has lately been published by the Mount Wilson Observatory.

The distance of a group of stars may be found from the mean parallactic movement (see *Stellar Motion*) of the group. In other words, the space through which our Sun travels, which is about twice the diameter of the Earth's orbit in a year, is taken as the base-line with which to measure the distance of the stars. The parallaxes of some binary stars have been found by a computational method assuming a value for their mass (hypothetical parallax).

For some distant objects a method is adopted depending on a peculiar property of a class of stars known as "Cepheid Variables." These stars show very regular fluctuations, coming to maximum at intervals which range from a few hours to several days, and it has been found that the length of this period has a relation to the mean absolute brightness of the star. The stars with longest period are intrinsically the brighter, and a definite law has been evolved connecting the two qualities. These Cepheid Variables are very common in globular star-clusters—the peculiarity was, in fact, first suggested by a number seen in the lesser Magellanic cloud—and by adopting this law it is clear that the great distances of such clusters may be surmised from a simple observation.

To express large distances a large unit is required. One is the space that light moves through in one year, which in miles is nearly 6 followed by 12 zeros; another unit is the *parsec*, or the distance at which the mean radius of the Earth's orbit would subtend an angle of  $1''$  (parallax = one second). This is  $\frac{3}{4}$  times the light-year and in miles is rather more than 19 followed by 12 zeros. The kiloparsec as equivalent for 1,000 parsecs and the megaparsec for a million are words now in use. There is also a unit little used called the *Siriometer*, which is equivalent to a million times the distance of the Earth from the Sun.

#### STELLAR MOTION.

Many, if not all, of the so-called Fixed Stars are gradually changing their positions relative to one another, the movement of each star being called its Proper Motion. Consideration of these

proper motions has led to the conclusion that they are in part due to actual movement in space of the stars themselves, but in part to the movement of our own Sun, which causes an apparent motion of the star in the opposite direction, this latter being called the star's parallactic motion. From this it has been found fairly conclusively that the Sun, and with it the Earth and planets, is moving through space with a speed of 19.5 kilometres per second towards a point on the celestial sphere not far from the bright star Vega. The Proper Motions of Stars of spectral type F and G are found to be much larger on the whole than those of other types, and it is therefore to be supposed that these classes are nearest to us. These are facts of observation that have been known for many years past. These proper motions may be found to be consistent with theories of galactic rotation, or others of star streams that have been proposed and developed.

By an optical principle known as Doppler's, it is possible to find from its spectrum the rate at which a star is approaching or receding from us, and the "line of sight" or "radial" velocities of many stars have been found in this way.

#### NEW OR TEMPORARY STARS.

The phenomena known as Novae or Temporary Stars are not to be classed as the usual variable stars for their rise to maximum so far as is known occurs only once in their history, the general course being as follows. A star of naked eye magnitude, sometimes a very bright one, appears suddenly in a place where no such object had been seen hitherto and remains visible without telescopic aid for some weeks or months, declining in brightness, with fluctuations, at first rapidly and then more slowly and finally sinks to telescopic magnitude. It may be seen as such many years afterwards, when its light often shows traces of variability. It is generally found that the Nova appeared in the place of a faint star shown on a chart or in a star-catalogue that may have blazed into conflagration, but on the other hand the juxtaposition may be merely fortuitous. Novae are not always of naked eye magnitude, for many are found by telescope in nebulae and star-clusters which supply data for some theories of the cosmos. Confining attention to bright Novae the early rapid increase of brightness and subsequent spectroscopic observation appear to some to indicate an expanding shell of gaseous matter rather than to a sudden increase of temperature. From one hypothesis it follows that every star will be a Nova at some time during its history. A list of 13 bright Novae that had appeared in the years 1848-1925 was given in the issue of this Almanack for 1926. Previous to those in that list Novae had appeared in 1572, 1600, 1604, 1670, whilst later examples have been Nova Herculis that was first seen on Dec. 13, 1931, of which an account was given in last year's Almanack, and several that appeared in 1936.

In the night of June 18, 1936, or perhaps before a star of 3rd or 4th magnitude hitherto unknown as a naked-eye star, was seen by several persons near the boundary between the constellations Cepheus and Lacerta. The star, Nova Lacertae, increased in brightness and came to a maximum, 2.2 magnitude on June 20, and then faded rapidly

These are approximate times of the middle of the period of diminished light.

and nearly uniformly, losing  $5\frac{1}{2}$  magnitudes in two months. In September a Swedish astronomer found on a photographic plate a star in the constellation Aquila that appears to have been a Nova that came to a 7th magnitude maximum about October 3rd, and discoveries of Novae in Sagittarius and Aquila with maximum 6th and 7th magnitude respectively, were announced in October.

## DOUBLE AND BINARY STARS.

The large majority of stars when looked at through a telescope appear as single points of light of different degrees of brightness and perhaps differing slightly in colour. Some, however, are seen to consist of two, or more, components, and the measurement of the relative position of these forms a branch of observational astronomy. Some double stars that are known to have gravitational connection are called Binary stars. The components of  $\gamma$  Virginis describe an orbit about one another in about 180 years. Other visual binaries have periods that range from 10 to 250 years, but a method (see below) other than direct visual observation reveals the existences of binary stars revolving in orbit in periods that may be a few days or only a few hours.

## SPECTROSCOPIC BINARIES.

As mentioned on p. 177, it is possible, from certain peculiarities in a star's spectrum, to deduce the speed with which any star is advancing towards, or receding from, the earth. As a result of this the spectrum of a binary star shows two distinct sets of lines, which oscillate about their mean position in a period equal to the period of the star. There are many stars of this kind with components so close together that they cannot be seen as two visually, but whose orbit may be determined from observations of their spectrum. Such stars are called Spectroscopic Binaries.

## VARIABLE STARS.

Although the stars generally shine with unchanging brightness, there are some among them which are exceptions to this rule, and of these Algol, the star  $\beta$  of the constellation Perseus, is the best known. In general this star is of about the second magnitude, but at regular intervals of something less than 69 hours it fades

away to between third and fourth magnitude, taking rather more than  $4\frac{1}{2}$  hours to do so, and after a brief minimum regains its light in the same time. It is thought that this is due to partial eclipse by a dark companion that moves in an orbit round the bright star. The approximate times when this star will be at minimum in the months when it is suitably placed for observation are given in the table on this page. The position of Algol is given by R.A. 3h. 4m., Declination  $40^{\circ} 43' N$ .

There are variable stars of types other than those like Algol. Mira Ceti (R.A. 2h. 16m., Declination  $3^{\circ} 16' S$ .) known as a long period variable (331 days) will probably be at maximum this year in September or October, when it will be visible in the early evening. Its magnitude at max. is between 2 and 5, and at min. 9 or 10. (See pp. 160, 161.)

## STAR CLUSTERS AND NEBULÆ.

Among the apparently solitary stars there are found groups of stars gathered close together, some of which may be easily separable into individuals, others that can only be separated by the most powerful telescopes, and objects that appear as unresolvable patches of light; the latter are called nebulae, and were aptly described by Herschel as "shining fluid."

There are nebulae called planetary that are small, regular in outline, and show a uniform disc. Analogous to these are some which are dark in the centre called annular or ring nebulae. Beyond this the spectroscope divides the nebulae into two great classes. The first spectroscopic observation of a nebula, made by Huggins in 1864, showed a spectrum of one bright line only, which indicated that these bodies, or at least some of them, are constituted of glowing gas. Later investigation showed that the spectra of some nebulae are continuous, such as might arise from a cluster of stars. These are called "white" nebulae, in distinction to those with bright line spectra, which are "green" or gaseous. Photography supplies means of studying the number and form of nebulae in detail, and it is found that a large proportion of them are of spiral form. These are the extra-galactic nebulae, and it is estimated that two million of them may be seen with the 100 inch telescope at Mount Wilson. The gaseous green nebulae are in a small minority, and are generally diffused and irregular in outline and lie (as do the

planetary nebulae) mostly in the Milky Way. Globular star clusters also lie outside the Milky Way, but irregular clusters are within its limits. There are also masses of Dark nebulae in space which may be the earliest form of matter. The spiral nebulae have been much studied as to form and brightness, and with a certain system of classification the hypothesis is put forward

that nebulae of the same class are approximately of the same size, and hence that their relative distances may be inferred. The farthest nebula that has been observed as yet is about 50 megaparsecs distant; its red shift indicates a retreat from us (see p. 178) at the rate of 15,000 miles a second, nearly a tenth of the velocity of light.

New Gen. Cat.	Object.	R.A. Dec. (1950).	Constellation.	Description.
		H.M.

THE Sun is one of the millions of stars that make up the Universe, and, so far as human knowledge goes, in magnitude and constitution is not unlike the stars of the night sky. It is surrounded by a family of smaller bodies of which our Earth is one, and the Solar system, which is only a minute detail in the structure of the Universe, is the observing station from which we look out in all directions across the great distances which separate us from the other members of the stellar system.

The Solar or Planetary system consists of the Sun, with eight major planets, and minor planets or asteroids, that may be counted by thousands, circulating round it at varying distances in oval-shaped orbits. A moving object discovered in the year 1930 is said to be a ninth major planet (see Pluto, p. 183). Six of the major planets have smaller bodies circulating around them, so that each forms a separate system, but all the bodies receive their light and heat from the Sun.

The periodic comets which return to perihelion at regular intervals may be considered to be members of the Solar system, since they move in elongated elliptical orbits of which the Sun is at a focus. It is likely that their light is reflected sunlight, since they become brighter as they approach the Sun, but they seem to be partly visible by their own light.

The plane of the Ecliptic in which the Earth moves round the Sun (see p. 187) is used as a fundamental plane of reference. The other planets move in planes inclined but little to the plane of the Ecliptic, at varying distances from the Sun, and describe orbits in periodic times which are connected with the distances by a certain relation known as Kepler's 3rd law. The squares of the periodic times vary as the cubes of the semi-major axes. Following are given brief notes on each of the bodies which make up the Solar system, with details of their sizes, distances from their primary, and periodic times in tabular form (pp. 185, 186). The time of rotation about its axis, or the length of the day of the planet, is added when this is known.

#### THE SUN.

The surface of the Sun, seen in a telescope, presents a mottled appearance formed by a darkish background on which small brilliant patches are scattered, the shape of these being such that they have been called alternatively rice-grains or willow leaves. On this surface, which is called the photosphere, black spots appear sporadically, and around them are brilliant streaks called faculae, that are conspicuous when the spots are near the edge of the Sun. Bright eruptions of hydrogen and dark streaks, generally called flocculi, can be seen in the central parts of the disc with a spectrohelioscope. There are also brilliant clouds of calcium vapour pervading the solar surface that are revealed by a device called a spectroheliograph, by which the whole of the Sun's disc may be photographed by the light of any element, and of that element only. Modern views describe the spots as columnar vortices which have a deep-seated origin far below the photosphere, and imply that a sun-spot is a vast tornado in which electrified particles are rapidly whirled, as is proved by the presence of a magnetic field. The spots vary in size and number, and increase and decrease somewhat uniformly in both respects, passing through a maximum about every eleven years.

They increase at a rather more rapid rate than they decrease. From measures of their position on the disc and by help of the elements given on page 2 of each month the latitude and longitude (heliographic) of the spots can be computed. It is seldom that spots appear in latitudes greater than  $30^\circ$  from the solar equator, but about the time of spot minimum or rather earlier small spots appear in that or even higher latitudes, and during the succeeding eleven years the spot regions converge towards the solar equator (*Spoer's Law of Zones*). At time of maximum the spots are largely in solar latitude  $12^\circ$  to  $14^\circ$  N. and S. The periodicity was first noted by Schwabe, of Dessau, in the year 1843 from a comparatively few years' observations, but records of earlier years and a continuous and complete record made subsequently prove the existence of a period of average length of  $11\frac{1}{2}$  years from maximum to maximum, though there are large variations from this mean as shown by the table below. The prominences (*v. infra*) also show a fluctuation in their activity in a period of the same length, and the form of the solar corona changes with the Sun-spot cycle in a most marked way. Not only this, but there are some terrestrial occurrences that vary in like phase with these solar, which seems to show convincingly a connection, or at any rate a relation, between Sun and Earth (see page 188). The Sun rotates on its axis in about  $25\frac{1}{2}$  days, which is shown by the movement of the spots across the visible disc, but because the Earth has moved in its orbit in that time the period of rotation with respect to the Earth, the Synodic period, as it is called, is  $27\frac{1}{2}$  days, and a spot may therefore be on the visible disc for 13 or 14 days. These are approximate mean values, for the Sun does not rotate as a whole solid body, and the rate of rotation is not the same in all latitudes. A formula derived from the Greenwich record of spots during the period 1878-1923 gives for the time of sidereal rotation in different latitudes, either north or south:—

	d. h.		d. h.
Equator .....	25 1	Lat. $15^\circ$ .....	25 8
Lat. $5^\circ$ .....	25 2	„ $20^\circ$ .....	25 14
„ $10^\circ$ .....	25 5	„ $30^\circ$ .....	26 6

These figures refer to both hemispheres of the Sun. The addition of 2 days gives approximately the period of rotation with respect to the Earth. A formula for the daily rotation, derived from the long-lived spots in the cycle 1924-1934,  $14^\circ 37' - 3^\circ 0' \sin^2 (\text{lat.})$  is in approximate accordance with the above figures.

#### DATES OF SUN-SPOT MAXIMA AND MINIMA.

Maxima.		Minima.	
1805.2	1870.6	1810.6	1878.9
1816.4	1883.9	1823.3	1886.6
1829.9	1894.1	1833.9	1901.6
1837.2	1906.4	1843.5	1913.1
1848.1	1917.7	1856.0	1923.6
1860.1	1927.5	1867.2	1933.8

During the year 1935-36 sunspot activity has continued to increase, there having been, besides other large spots, four or five of area equivalent to 1,000 millionths of the Sun's visible hemisphere, which shows that the maximum, that, according to the above figures, should be in the middle of 1938, is approaching. When the intense light of the Sun is shut off by the interposition of the dark body of the Moon in a total solar eclipse, appendages called prominences

that consist of glowing hydrogen gas are seen arising from the chromosphere, which is the same given to the solar atmosphere immediately surrounding the photosphere. It is possible to observe these at times other than when the Sun is eclipsed. An appendage of the Sun outside the chromosphere, called the Corona, can only be seen during total eclipses. The coronal ring immediately adjacent to the Sun consists of a pale green light containing hydrogen; the outer portion is a beautiful mass of silvery white light, in form of feather-like plumes, with dark spaces between, sometimes as long as twice the Sun's diameter. The corona appears to vary in shape and extension according as the eclipse occurs at the period of maximum or minimum of Sun-spots, being at the latter time of a pronounced shape, with long streamers on either side known as the "wind-vane." At the eclipse on June 19, 1936, it was described as bright, pure white in colour, and of the intermediate type tending rather towards maximum. The two hemispheres seemed to be different—the northern tending towards minimum, and the southern towards maximum type. Solar eclipses are total when seen from places on which the shadow of the Moon falls, and the Sun is seen only partially eclipsed from localities that are outside, but not far from, this path of totality, because the observer's position is outside the cone which envelops both Sun and Moon. There are more solar eclipses than lunar in the proportion of four to three taking the whole earth into account; for any given station the proportion is reversed.

#### MERCURY.

Mercury is the nearest planet to the Sun, and the smallest in the system. Because it moves in an orbit between the Sun and the Earth this planet can never be seen far from the Sun, but is always at a short distance to the West or to the East of that body. In the former case Mercury appears as a morning star and in the latter as an evening star. The extremes of these apparent excursions are known as Greatest Elongations, and their times and extent, measured by the angle included between the lines which join the Earth to the Sun and the planet respectively, are given in the third page of each month. The great ellipticity of the orbit of Mercury causes the amount of these Elongations to vary considerably, and they may be as small as  $16^\circ$  or as large as  $28^\circ$ . Eastern elongations, when the planet is seen as an evening star, occur at intervals of about 116 days, as do Western, and the best opportunities of seeing the planet are before the Eastern elongations in the spring and after Western elongations in the autumn. There is at least one eastern elongation in the first part of the year, and since three periods are equivalent to 348 days, these elongations happen about 77 days earlier in the calendar year by year. This year Mercury will be visible as an evening star in April, about the 10th or perhaps earlier. It will be seen before sunrise at the end of September and first part of October. The rather rare phenomenon of a Transit of Mercury across the Sun's disc will happen this year. (See p. 132.) Mercury shows phases to the Earth like the Moon in her first quarter if the elongation be in the East, and like her last quarter if in the West. (See p. 184.)

#### VENUS.

Venus, which is nearly twice as far from the Sun as Mercury, its distance from the central

body being rather more than two-thirds that of the Earth, is very nearly the same size as our globe. Her apparent movement with respect to the Sun is similar to that of Mercury, except that, being farther from the Sun, and nearer to the Earth than her smaller neighbour, the angles of Elongation exceed those of Mercury, and extend to  $47^\circ$ . Writing generally, it is believed that the planets rotate on axes as does the Earth, but this is not known to be the case for the interior planets Mercury and Venus, because of the difficulty in seeing any points or markings on their surfaces that may be considered permanent, though some are occasionally suspected by observers to persist. The rotation period of Venus has been found to be about 23 or 24 hours, or 24 days, or 225 days which is the period in which it completes its orbit round the Sun. With this divergence it can scarcely be said that any period is proved. A recent paper by Antonladi emphasises the difficulty of the problem, but gives some support to the long period. A scheme, practised in America, of photographing through screens of coloured glass (see Mars below) applied to this planet leads to the suggestion of an outer covering of cirrus cloud, and markings seen on the photographs taken in ultra-violet light appear to indicate a period of rotation of 30 days. Venus will be conspicuous in the early evening the first three months of this year; in the early morning from July to September, and may be seen in the dawn in the last three months.

#### MARS.

Mars, the first planet whose orbit is exterior to that of the Earth, is a little larger than Mercury and considerably smaller than Venus and the Earth. Details of his distance, size, and period will be found in the table. Mars is in opposition at intervals of about two years, because it moves at a rate not greatly different from that of the Earth. It will be in opposition on May 19 and will be visible for some period during the night throughout the year.

Unlike Mercury and Venus, Mars exhibits many well-defined markings, which enable its rotation period to be well ascertained. There are white spots at the poles of rotation that appear to be snow, or some material that melts, since they dwindle, or even disappear in the Martian summers. It has been suggested, as a fact derived from observation, that this melting of the polar snows is quicker at the time of Sun-spot maximum than at minimum. The remainder of the surface of the disc is made up of dark bluish-grey areas that were at one time thought to be water but are now regarded as regions covered with vegetation and extensive areas of ruddy or orange hue, largely in the northern hemisphere, that may be of the nature of sand or rock. These markings may be considered permanent, though they suffer small changes apparently due to cloud formation above them, whilst there are changes in the intensity and colour of the dark areas such as would be produced by the growth and decline of vegetation consistent with the seasons (inferred geometrically) on the planet. There are markings of such dimensions that they may be properly called "canals," but certain fine, straight markings seen by some observers, but not by others, have received this name, which is certainly unfortunate, as it has been taken to imply that they are of manual construction, but for this there is no sufficient

evidence or proof. The possibility of communication with Mars, which in some minds has been strengthened by the advent of wireless telegraphy, is fantastic.

A recent method of investigation is taken as showing that Mars has an atmosphere of considerable depth and obscuring power, sporadically cloud-bearing, and that the white polar spot is an atmospheric phenomenon. The two satellites of Mars, Phobos and Deimos, were discovered by Asaph Hall in 1877. The rotation period of Mars is approximately 24h. 37m.

#### THE MINOR PLANETS.

Moving in orbits, which in general lie between those of Mars and Jupiter, are a large number of small bodies called minor planets or asteroids. Every year a considerable number of additions are made to the list, two hundred and ninety having been discovered or announced in the year 1935. The orbits are determined as observations accrue, and a planet with an orbit is given a permanent number and perhaps a name; but until that is done it is known by letters according to a system. At present there are about 1,350 on the permanent list, and perhaps a thousand that are awaiting further investigation. It has been recently estimated that there are about 44,000 minor planets within reach of present instruments. The four largest, found in the early years of the 19th century, are—Ceres, 485 miles; Pallas, 304 miles; Juno, 128 miles; and Vesta, 243 miles in diameter. Some of these celestial bodies are perhaps nothing more than great masses of rock flying round the Sun.

The periodic times of their revolutions vary considerably, and an average may be taken as 1,600 days, or 4½ years. Some of the orbits are very oval, and the inclinations of their planes to the Ecliptic have considerably different values. The inclination of Pallas is 35°, whilst that of Juno is only 13°. As has been said, the orbits in general lie between those of Mars and Jupiter, but there are some that pass those limits. The planet Hidalgo has the longest period, 13½ years, and travels out as far as Saturn's orbit. It has the highest inclination, 43°, of any minor planet, but of one discovered in 1935 the inclination is 39°. Eros comes within the orbit of Mars, and may be in some circumstances within 13 or 14 million miles of the Earth. This happened in 1931, and the observations of the planet and surrounding stars then made are now under discussion to determine the Solar parallax, or the distance of the Sun from the Earth.

It happens, for dynamical reasons, that if an asteroid moves in an orbit whose mean distance from the Sun is the same as that of Jupiter and is at a distance from Jupiter equal to that mean distance, so that three bodies—Sun, asteroid, Jupiter—are the vertices of an equilateral triangle, this arrangement will remain, though the asteroid may oscillate about its vertex. Eleven asteroids are known as examples of this case and are named after heroes of Homer's *Iliad*. They are hence known as the Trojan group. The eleventh member was discovered in 1936.

#### JUPITER.

The next planet in order from the Sun, Jupiter, is the largest in the system, and has a diameter eleven times that of the Earth. Its density, however, is only ¼th that of the latter. On viewing Jupiter through a telescope it will be seen that the disc is not circular, but its form is an oblate spheroid, believed to be due to the

rapid axial rotation, which causes a flattening at the poles and bulging outwards at the Equator. The same effect is produced on all the planets in more or less degree.

Jupiter has four principal satellites, which were the first celestial objects discovered by the telescope. Galileo, who observed them in January, 1610, is said to be the first, but Simon Marius has good claims to be considered an independent discoverer. It has also five much fainter satellites which are far beyond the reach of small telescopes. One of them was discovered with the 36 inch refractor at the Lick Observatory in 1892. The remaining four, which are extremely faint, were detected by means of photography and are regarded as among the most difficult to see of celestial objects. The inner two of the major satellites are each about as large as our Moon, the two outer about 50 per cent. larger.

The characteristic surface features of Jupiter are the bright zones separated by dark belts to both of which names are applied in analogy with the zones on the Earth. The central feature is the broad, bright Equatorial Zone, bisected by a narrow line known as the Equatorial Band. South of this zone follow in order the S. Equatorial Belt, S. Tropical Zone, S. Temperate Belt, S. Temp. Zone, S.S. Temp. Belt, S.S. Temp. Zone, Polar regions, and similarly for the northern hemispheres of the planet. Examination by telescope shows detail and markings which, in many cases, are largely permanent. The best known of these is the Great Red Spot and its surroundings situated on the southern edge of the south Equatorial Belt. There are records of an observation of a spot by Hooke in 1664 which may have been an early appearance of this; the Rev. W. R. Dawes figured it in the form of an ellipse resting on the south equatorial belt of Jupiter on Nov. 27, 1857, and in 1878 its redness was very pronounced and brought the spot under general observation. A bay or hollow in which this spot is set was noted by Schwabe in 1831, and is still generally seen, but in the year 1936 faded with other S. Tropical features, leaving the Red Spot unusually prominent, as had happened in 1918-19 and 1826-27.

The rate of rotation of the planet is found by taking transits of spots or, in other words, by noting the exact times when markings are on the central meridian, and differences in the periods given by different markings is a matter of interest. In most latitudes of the planet the surface makes a complete rotation in about 9h. 55m., but for the equatorial region from 10° N. to 16° S. the rotation period is about 9h. 50m. Observations of different spots in a zone show differences of rotation time from the mean value for the zone, and it has been suggested that these abnormal values may in some cases be periodic, but the main fact of the equatorial current with respect to the body of the planet is very definite. Two systems are therefore used for defining the positions of markings on Jupiter. In System I., which pertains to the rapidly moving Equatorial Zone of the planet, the period of rotation is taken as 9h. 50m. 30·cs. System II. applies to the Temperate Zones, and in this the time of rotation is 9h. 55m. 40·63s. The rotation period of the Red Spot has been found by taking a mean over a long period to be 9h. 55m. 37s. A remarkable circulatory current in the South Tropical Zone, shown by the movement of spots, has been a feature of the observations by Phillips and others during the past few years.

APPARENT DIMENSIONS OF SATURN'S RING, 1937.

Date.	Major Axis.	Minor Axis.	Date.	Major Axis.	Minor Axis.	Date.	Major Axis.	Minor Axis.	Date.	Major Axis.	Minor Axis.
Jan. 11	37" 24	+1" 32	May 22	37" 34	-3" 01	Aug. 20	43" 10	-3" 76	Nov. 18	42" 06	-1" 77
Jan. 31	36" 35	+0" 71	June 21	39" 15	-3" 69	Sept. 19	44" 04	-3" 09	Dec. 18	39" 96	-1" 77
Feb. 20	35" 76	0" 00	July 21	41" 25	-3" 98	Oct. 19	43" 63	-2" 29	Jan. 1	39" 01	-1" 94

This table gives the angular dimensions of the outer limit of Saturn's outer Ring as seen from the Earth. The + sign shows that the N. side of the Ring is seen, the - the southern. The plane of the Ring passes through the Earth and the change is made from north to south on February 20. The Sun passed to the south side of the ring-plane at the end of 1936.

SATURN.

The sixth major planet in order from the Sun is unique in appearance because of its encircling ring-system, which in general renders it magnificent as a spectacle and for special reasons at some times an interesting object for telescopic observation. The system consists of two bright rings and an inner dusky ring through which the body of the planet can be seen. A marking on the outer ring known as Encke's division is sometimes seen, but it is doubtful whether this is a real separation. The rings appear to be flat annular discs of extreme thinness in the same plane which is inclined  $28^\circ$  to the plane of the Ecliptic, and at the beginning of this year Saturn is at a critical position in its orbit, which causes the rings to be invisible. (See note, p. 128, and Table above.) They probably consist of an immense number of minute bodies revolving like satellites round the body of the planet. Beils like those on Jupiter, but of not so pronounced a character, are seen on Saturn. Photographs of this planet, taken by ultra-violet light, show a wide dark belt near the equator which may or may not be an extension of the dusky ring. Saturn shows a bulging at equator, the ratio of the polar to the equatorial diameter being  $13\frac{1}{2}$  to 15. An eccentricity of the ring with respect to the Ball has been suspected.

Saturn has ten satellites, situated outside the rings; some of the former are visible in telescopes of low power. Titan, the largest satellite in the solar system, is about one and a half times the size of our moon, whilst Iapetus is nearly the same size as our satellite.

Titan was discovered by Huyghens in 1655, Tethys, Dione, Rhea and Iapetus (see table p. 185) by J. D. Cassini towards the end of the 17th century. Sir Wm. Herschel discovered Mimas and Enceladus in 1789, and Hyperion was observed for the first time, almost simultaneously by Bond and Lassell, in September 1848. The most distant, Phoebe, which was first seen in 1898 (photographically by W. H. Pickering), moves in its orbit in retrograde direction like the two exterior satellites of Jupiter, VIII. and IX. Themis, which is called the tenth satellite, though it appears not to be the farthest from Saturn, has been observed once only since its discovery in 1900, and its reality is doubtful.

Saturn's equator rotates in about  $10\frac{3}{4}$  hours. At rare occasions spots appear on this planet sufficiently definite for a rotation period to be determined from them. A spot that endured for some weeks in 1876 gave *10h. 14m. 24s.*, which is generally adopted. Another that appeared in 1933 also near Saturn's equator supported this with only a small difference. From spots that have appeared away from the Equator, periods of about *10h. 40m.* have been deduced, and it is suggested that there may be an equatorial current on Saturn as on Jupiter, but a more rapid one.

URANUS.

This planet, discovered by William Herschel at Bath in 1781, is only just visible to the naked eye. It will be in the night sky in the early months and latter part of the year 1937, being in conjunction on April 30 and in opposition on November 4. In a telescope Uranus is distinguished from the stars around by its disc, which is obvious though less than  $4''$  in diameter, and by the quality of its light, which is less piercing than that of the stars. The two outer and brighter of its four satellites were discovered by Wm. Herschel in 1787; the two inner by Lassell in 1847. The Shakespearean origin of the names of the two outer, Titania and Oberon, is obvious; the names of the two inner, Ariel and Umbriel, are perhaps from Pope's "Rape of the Lock." A hundred years ago it was thought that Uranus had six satellites, neighbouring stars having been mistaken for attendants. All four move in a plane which is inclined  $82^\circ$  to the plane of the ecliptic and in that plane they move retrograde, or in the opposite sense to the revolution of the planets round the Sun. If, however, the plane of their movement is regarded as inclined  $98^\circ$  to the plane of the ecliptic, their revolution may be considered direct. It is generally supposed that the plane in which the satellites move is that of the planet's Equator. A period of rotation has been determined by spectroscopic observation, its value being  $10\frac{3}{4}$  hours, and the direction the same as that of the satellites.

NEPTUNE.

This planet is a telescopic object of about the 8th magnitude that was detected on September 23, 1846, by Prof. Galle of the Berlin Observatory, as the result of mathematical deduction by Couch Adams of Cambridge and Le Verrier of Paris from irregularities shown by the observed positions of Uranus. Its single satellite, which was discovered by Lassell in October of the same year, moves in a plane inclined  $35^\circ$  to the plane of the Ecliptic in a retrograde direction like the satellites of Uranus. A period of axial rotation of the planet of  $7\frac{1}{4}$  hours has been inferred from variability of its light, and another of twice that length from spectroscopic observations, which is adopted. Triton has been suggested as the name of Neptune's satellite, but is not generally used.

PLUTO.

In the early months of 1930 a series of plates taken and examined at the Lowell Observatory showed a moving object that is considered by some to be a major planet, not far from the position which Percival Lowell had predicted for an extra-Neptunian body. Though reasons have been adduced to show that this body must be of the size and mass of Mars or the Earth, there is no proof that it is other than an

abnormal minor planet (q. v.), and Pluto does not yet appear as a major planet in the British Nautical Almanac.

## THE MOON.

Neither Mercury nor Venus, so far as is known, has a satellite; the one satellite of the Earth is the Moon, which is quite familiar to us. The mean distance of the Moon from the Earth is about 239,000 miles—near enough for us to get a more complete knowledge of its surface conditions than we can of any other member of the Solar system. Only one side of the Moon is seen from the earth, but every region of the Moon is presented to the Sun in turn, and neglecting hypotheses as to the possible existence of a lunar atmosphere and its effects, it seems likely that there are rather remarkable changes of temperature: in the lunar day of half a month it must be heated to an extreme degree, and in the other half subjected to cold equal to that of interstellar space. Her diameter is rather more than 2,160 miles. Her rate of motion through the firmament is  $13^{\circ} 10' 35''$  per day, which implies that she travels over a space slightly exceeding her own diameter in one hour. The average time from a New Moon to the next is 29<sup>d</sup>. 12<sup>h</sup>. 44<sup>m</sup>. 38<sup>s</sup>., but individual cases may range 6 hours and more on either side of this. When seen through a telescope the surface of the Moon presents many objects of great beauty and interest. A small instrument will show the chief "seas," plains, mountain ranges, ring-plains, and crater-pits. The question as to the origin of these formations, whether they may have been caused by volcanic action, or, on the other hand, by the impact of meteors, forms an interesting subject for discussion. It is believed that the Moon was at one time part of the Earth and became detached.

When the Earth passes between the Sun and Moon, the Earth's shadow sweeps across the Moon and causes a lunar eclipse, which may be either total or partial as in the case of solar eclipses. There is the difference that the phase of a lunar eclipse is seen the same from all places where the Moon is above the horizon at the time. Solar eclipses can take place only at New Moon, and lunar eclipses only at Full Moon. (See p. 187.)

The Full Moon which occurs near the Autumnal Equinox rises at nearly the same time, about sunset, on several consecutive evenings. Because in earlier times it was thought that this was specially ordained to add to the length of daylight, and so facilitate the ingathering of the crops, the phenomenon was called the Harvest Moon. The Full Moon which follows this is called the Hunter's Moon. (See p. 148.)

## A FEW OF THE CHIEF LUNAR FORMATIONS.

*Wedge-shaped Valley of the Alps.*—Near the central line of disc, towards the north, a cleft 83 miles long and  $3\frac{1}{2}$ - $5\frac{1}{4}$  miles broad.

*Apennines.*—An extensive mountain range somewhat similar to terrestrial features. Visible to naked eye when projecting into the dark part of the disc. Length, 460 miles; highest summit (Huyghens) reaches 18,000 feet.

*Aristarchus.*—A lunar crater in N.E. quadrant. The brightest object on the Moon. This crater is visible as a luminous spot when all the surrounding region is involved in shadow.

*Mare Crisium.*—A dark grey oval plain visible to naked eye near W.N.W. limb of Moon. Extends 280 miles N. to S. and 354 miles E. to W. Well seen five days after new or a few days after full.

*Mare Serenitatis.*—Lies S. of the Moon's centre, and extends over 423 miles. A nearly circular dark plain. Contains a crater, Linne, formerly suspected of change. This *mare* is visible to naked eye.

*Clavius.*—One of the finest craters on the Moon, and about 142 miles in diameter. Situated on S. limb.

*Tycho.*—Towards S. limb. "The metropolitan crater of the Moon." A fine crater 54 miles in diameter and 16,600 feet deep. Central hill nearly a mile high. Tycho is the centre of a remarkable system of bright rays radiating from it that are very conspicuous at the time of full moon.

## THE AURORA BOREALIS.

This phenomenon may be considered more terrestrial than celestial. It sometimes happens that an unusual luminosity is seen in the northern sky in the form of streamers, arches, and condensations. This has been regarded as showing the outer limit of our atmosphere, and its height determined by means of simultaneous photographs taken from two or more stations considerably separated. It is found that very few auroræ are below 50 miles high, and above that level the number increases rapidly, the most frequent heights being about 63 and 66 miles. Above 66 miles the number diminishes, but some have been measured as high as 400 miles. It is suggested that the aurora is due to electrical discharge caused by charged particles shot into the earth's atmosphere from the Sun. An auroral display generally happens about the time of the occurrence of a terrestrial magnetic storm (see p. 188). There is some evidence of a tendency for a display to be repeated after an interval of 27 days, which is the period of rotation of the Sun with respect to the earth, and they are more frequent at times of sun-spot maximum. A prominent line in the green in the spectrum of the aurora has given rise to much study and has lately been shown by laboratory experiment to be due to a mixture of oxygen and helium bombarded by high-speed electrified particles, but as this line has been found to be present in, the light from the night-sky in non-polar regions when no aurora is visible it may be that this line is not directly connected with the phenomenon.

## THE ZODIACAL LIGHT.

This is an appearance whose cause is not completely understood, to be seen only from places distant from towns and cities where the air is free from smoke and the darkness of the sky is not affected by the glare from artificial lights. At such places in northern latitudes it shows, when the moon is absent, as a cone of faint light stretching up slantingly in the direction of the ecliptic from the point of the horizon that is above the Sun, and therefore is best seen before sunrise in the autumn months and after sunset in Spring because at those times that direction is inclined at a large angle to the horizon. From high elevations in the tropics it may be seen throughout the year. A distinction is sometimes made between this and the Zodiacal Band which is an even fainter phenomenon and is apparently a prolongation of the Zodiacal Light that extends entirely across the sky, and so forms a complete ring. There is at the point exactly opposite to the Sun a patch, a few degrees in diameter, of slightly brighter luminosity called the "Gegenschein" or "counter glow." The Zodiacal Light has been said to be a mere atmospheric effect, but this is inconsistent with some of the chief features of its appearance. It may be the manifestation of a widely scattered appendage of the Sun in the plane of the ecliptic, or, it has been suggested, it may be sunlight reflected from a vast concourse of meteoric systems. There is some slight evidence that it is more prominent at times of magnetic disturbance than at others.

## METEORS.

Bodies of another kind that belong to the Solar system are the meteoric streams, which give rise to occasional showers of meteors, falling stars, or fireballs, all of which are of the same class, the distinction being only one of size. They are visible in varying number on every night of the year, sometimes so abundant as to be quite spectacular, and it happens in some cases that on a particular date, or dates, meteors are seen in the same part of the heavens in every year. This is explained by the fact that a stream of meteors, more or less dense, is moving in an orbit that intersects that of the earth, and the latter runs into the

meteors on the date when it comes to the point of intersection. There is some reason to suppose that meteor swarms are in some cases gregations that accompany partly disrupted comets, an illustration being supplied by a very profuse display of meteors on Oct. 9, 1933, that followed the return to perihelion in July of Giacobini's comet of 1900. Similar but less intense showers had occurred on that date in the years 1926 and 1927. This comet has a period of 6½ years and presumably the meteors, or the dense part of the stream, have the same, so that a repetition is not to be yet expected. The real paths of a great number of meteors have been computed, and the average heights found to be about 70 miles at the beginning and about 48 miles at the end. The speeds vary from 10 to 45 miles per second, but occasionally these limits are passed. Fireballs, or very bright meteors, make their appearance at all times of the year unexpectedly, so that they are often imperfectly noted and computation of their flight is not practicable. On Jan. 3, 1935, at 9.25 p.m., a fireball, comparable in brightness to the moon, shot from a height of 55 miles over the English Channel, 23 miles S. of Christchurch, to a height of 20 miles over near Wotton-under-Edge, Glos. The length of the luminous track was 52 miles, performed at a speed of 13 miles per second. The object changed in colour as it progressed and broke into two pieces towards the end of the flight. Detonations were recorded at Dursley, Glos., and at Bradford-on-Avon, that were probably due to the rush of the meteor through the air setting up "shock-waves," which reached the ear as thunder-like noises.

On the previous page is given a list of the nights when meteor showers may be expected, with the radiant points from which the meteors

diverge. The dates given are those when the meteors are likely to be most abundant. In some cases, e.g., the Persids, the apparition lasts beyond these limiting dates, and the position of the radiant which changes from night to night is given for the date of maximum.

## COMETS.

Comets that revolve in elliptical orbits round the Sun as focus, and return to view at periodic intervals, may be considered members of the Solar system. The periods that have been confirmed by returns range from 3½ to nearly 80 years, whilst a few other computed orbits show periods as large as a million years. Other comets move in parabolic courses and apparently do not repeat their visits to the Sun.

Those that move in orbits in periods from 3½ to 9 years are numerous. Their paths extend outward to the region of Jupiter's orbit, and are hence called Jovian comets.

Three comets whose arrival was unexpected were discovered in the year 1936 (up to Oct. 1). The first two, Peltier and Kaho, move in parabolic orbits; the third, discovered by Mr. Jackson of the Union Observatory, Johannesburg, is an addition to the Jovian family, its period being 6.8 years. D'Arrest's comet, that has a period of 6½ years and has been seen at several returns since its discovery in 1851, is expected to be at perihelion early in 1937 but was not seen, though looked for, in 1936. Other periodic comets due in 1937 are Encke that is invariably seen at return which occurs every 3.3 years and will be at perihelion quite at the end of the year. Grigg-Skjellerup is expected at perihelion in May and Neufmin in November. The return of a comet known as Tuttle-Giacobini is doubtful, and Gale's comet, that will be in perihelion in 1938, may be seen in 1937.

Polar radius of the Earth .....	3950.01 miles.	(Perigee to Perigee)	

The shape of our Earth is that of an oblate spheroid, or a solid of revolution whose meridian sections are ellipses not differing much from circles, whilst the sections at right angles to these are circles. The length of the Polar axis, according to a recently accepted determination (Hayford) is 7,900·0 miles and the diameter of the Equatorial circle 7,926·7 miles. The suggestion has been made that the Equator is not an exact circle, but the supposed deviation from circularity was small, and the fact has not been proved. The mean density of the Earth is 5·5 times that of water. The Earth moves round the Sun in a plane which passes through the Sun's centre, or, to write with more precision, the centre of gravity of the Earth and Moon moves in this plane, and both revolve round the centre of gravity but not precisely in the plane. The plane is called the plane of the Ecliptic. The Earth's Equator is inclined to the Ecliptic at an angle of  $23\frac{1}{2}^{\circ}$ , and it is this tilt which causes the seasons. At certain times of the year the Sun is high above the Equator and in mid-latitudes either north or south, not only does the high noon altitude make the days longer, but the Sun's rays fall more directly on the Earth's surface and make it hotter. The periods of Summer and Winter are opposed in the two hemispheres, the time of Summer in the Northern coinciding with Winter in the Southern, and *vice versa*. In the region of the Equator the noon altitude of the Sun is large throughout the year, and there is little variation in the length of the day. Since the axis of the Earth is inclined always in the same direction, the line of intersection of the Equator with the Ecliptic moves parallel to itself as the Earth travels round the Sun (approximately). The instants when this line passes through the Sun are called the Equinoxes. The Sun and Earth are surrounded on all sides by the stars, and because the Earth moves round the Sun, the viewpoint changes its position relative to the sun and stars during the year, and different sets of stars are seen in the sky at midnight in Summer and Winter. The average velocity of the Earth in its orbit is  $18\frac{1}{2}$  miles a second, and it moves more slowly in July than in January. It makes a complete rotation on its axis in about 23 hours 56 minutes of mean time, which is the sidereal day. Because of the movement of the Earth in its orbit the length of the rotation with respect to the Sun, or the solar day is more than this by about four minutes (*see pp. 169, 190*). It has been shown almost conclusively in recent years that the axis of rotation is not a fixed line in the Earth, but that its extremity, or the North Pole of the Earth, moves in a curve, roughly spiral, about the pole of figure as centre at a distance of a few feet from it.

#### THE TIDES.

The Tides of the Ocean are rightly attributed to the attractive influence of the Moon on the Oceans, modified by a similar influence of the Sun, which is less in amount because of the much greater distance of the attracting body. If the Earth were a globe uniformly covered with water it would be possible to account for the observed phenomena and predict them by simple mathematical consideration of these attractive influences, but these are very greatly modified by the land formations of our globe, and the prediction of the tides for any port depends mainly on the results of observation. A series

of observed times and heights of the tide having been compiled and analysed, the analysis will show that the complete tidal movement can be represented by the combination of a series of periodic terms, and if these terms are each carried forward to some future date their recombination will give the predicted tide. Taking the mean sea-level as datum, writing generally, at any place high water occurs twice in every 24 hours, the average interval between tides being 12 hrs. 24½ mins. High water is at its highest (springs) at or near New and Full Moon, whilst low water falls an equal amount below at those times. At or near the time of the first and last quarters of the Moon (neaps) the high water rises only about half as much above the mean level as it does at springs, and the low water falls about half as little below it. These extremes do not usually coincide exactly with the times of these phases of the Moon, but occur later, by an interval known as the *age* of the tide—thus, at London Bridge, the highest or spring tide occurs 2½ days after New or Full Moon, and the neap tide is similarly delayed. The difference of height of spring and neap tides is the most apparent of the periodic differences which make up the whole tidal variation. Besides this there are differences due to the varying distance of the Moon from the Earth, and when the Moon is at or near perigee at New or Full the tide is specially high. There is a slight difference in the heights of the spring tide at New and Full Moon, and also in the height of the neap tide at the respective quarters, but these and other small periodicities are not appreciably noticeable at some ports. The mean level of the sea remains practically constant, but small changes have been detected that may be assigned to various causes.

#### TERRESTRIAL MAGNETISM.

The best known manifestation of this phenomenon is its effect on the needle of a mariner's compass, which, except for the variations to be immediately described, points continually northward. The north point indicated by a compass needle is not, except in particular cases, the north point shown by astronomical observations; in other words, the needle does not point to the North Pole of the axis of rotation of the Earth, but makes an angle with the terrestrial meridian. This angle is called the Magnetic Variation, or, more generally, Magnetic Declination, and differs in different parts of the world and even over limited tracts of country. Lines of equal magnetic declination run across the British Isles in directions approximately parallel to that of a line from Land's End to Edinburgh. Along a line joining Cambridge to Littlehampton, the declination (West) is, approximately, the same as at Abinger. At Dover it is now rather more than a degree less; from Newcastle to Plymouth it is nearly  $1\frac{1}{2}^{\circ}$  greater, and along a slightly curved line from Killarney to the island of Lewis the west declination is  $5^{\circ}$  greater than at Abinger. There are two points on the globe to which the magnetic meridians and lines of equal declination converge, known as the Magnetic Poles. At these points a freely suspended magnetic needle would stand vertically. The position of the North Magnetic Pole adopted in Admiralty Charts is lat.  $70^{\circ} 40' N.$ , long.  $96^{\circ} 5' W.$ , which differs nearly a degree in each element from the position found by Sir John Ross in 1831, and agrees more nearly with

the position found by Amundsen in 1903-5. The position of the South Magnetic Pole found in 1840 was  $73^{\circ} 30' S.$ ,  $147^{\circ} 30' E.$  The position of the S. magnetic Pole determined by Mawson in 1914 was  $71^{\circ} 10' S.$  lat.,  $150^{\circ} 45' E.$  long. The magnetic declination at any place changes gradually year by year, which was discovered by Gellibrand in 1634. The facts about declination were recognised among western nations by the end of the 15th century, Columbus being credited with the discovery. The Dip or inclination to the horizon was first noticed by Hartmann, of Nuremberg, in 1544, and was measured by Norman, of London, in 1576.

The information about magnetic declination and the other elements is known from observations made by officers of H.M. Navy and others in various parts of the world. A ship for U.M. survey service specially designed and prepared for this work is in course of construction.

#### Magnetic Declination at London.

Year.	"	'	East.
1580 .....	11	15	East.
1665 .....	1	30	West.
1765 .....	20	0	West.
1800 .....	24	0	West.

In 1819 the westerly declination at Greenwich was about  $24^{\circ} 25'$ , which was probably its maximum. The needle has been since moving slowly eastward at that place, and in the year 1925 the declination (mean) was observed to be  $13^{\circ} 10'$  west. The work of recording earth-magnetism was then transferred from the Royal Observatory, Greenwich, to Abinger near Dorking in Surrey. The values of the elements there found in successive years are given in the following table:—

Year.	Dec.	H.F.	V.P.	Dip.
	0			
1925	13 22' 7" W.	1860	42946	66 35' 1"
1930	12 24' 6"	18542	42924	66 38' 2"
1934	11 41' 1"	18533	42955	66 39' 7"
1935	11 30' 3"	18527	42931	66 40' 9"
1936	11 20' 0"	18553	4300	66 41' 2"
1937	11 9' 5" W.	...	...	...

The values for 1935 are to be taken as provisional, and the declination given for 1936 is inferred only. V.F. signifies vertical force.

The mean differences, Abinger minus Greenwich, for Dec. H.F. and Dip. were found to be—

1925	+ 12' 8"	+ 00' 18 3	- 16' 2"
1931	+ 13' 7"	+ 00' 17 0	- 16' 0"

The daily movement in declination of the needle at Abinger is 2 or 3 per cent. less in amount than that at Greenwich.

The declination varies during the 24 hours, for the needle makes a small excursion in the morning from East to West, and returns, the range at Greenwich being about  $12'$  in summer and  $7'$  in winter. The needle occupies its mean position in the morning about  $10h.$ , and again about  $18h.$ , throughout the year. It reaches its most westerly position about  $14h.$ , and its most easterly position during the night or early morning at a time which varies during the year. The

inclination or dip also varies in a similar manner to the declination. The range of these changes of the magnetic elements are greater in summer than in winter. The daily range of declination is larger at times of spot maximum than at minimum, and markedly follows the progress of the solar cycle.

#### MAGNETIC STORMS.

Besides these diurnal movements and their periodic variations, the magnets recording the three elements sometimes make sudden and violent oscillations which may continue for several hours. Such an occurrence is known as a Magnetic Storm, and may be accompanied by spontaneous electric earth-currents, which, if violent, interfere with telegraph working, and is often synchronous with a manifestation of the Aurora Borealis. A suspected recurrence of magnetic storms after an interval of 27 days that would support the theory that they are caused by radial emanations from the Sun, which strike the Earth—the hose-pipe theory—is not conclusively proved. There is frequently, but not always, a large spot on the Sun contemporaneously with a large storm, leading to the hypothesis of active areas on the Sun that may or may not be marked by a spot.

#### SUMMER TIME ABROAD.

Irish Free State	} As in Great Britain
Northern Ireland	
Channel Islands	
France, Corsica, Monaco	
	1 hour f. From last Sat. in March or first Sat. after Easter until the first Sat. in October. In 1937; April 3-4 to Oct. 2-3.
Netherlands	} 1 hour f. From April to Oct. approximately (dates fixed annually by Royal decree).
Belgium	
Luxemburg	
Portugal	
	1 hour f. Adoption and dates are decided annually.
Gold Coast	20 min. f. Sept. 1 to Dec. 31.
U.S.S.R.	By decree of 1930 (June 16) all the clocks in the Union are permanently advanced 1 hour on Standard Time.
U.S.A., Canada,	} Adopted in some but not all parts by local regulation.
Nova Scotia,	
New Brunswick	
Newfoundland & Labrador	
	1 hour f. first Sun. in May to first Sun. in October.

British Honduras	30 min. f. from Oct. 1 to Feb. 14 (approximately).
Argentina	The dates are fixed annually.
Falkland Islands	1 hour f. last Sat. in Sept. to penultimate Sat. in March.
Sarawak	20 min. f. from Sept. 14 to Dec. 14.
New Zealand	30 min. f. from second Sun. in Sept. to last Sun. in April.

(This list may not be complete.)

**Duration of Light and Darkness.**—The second column of the first page of Calendar for every month contains a small diagram showing the amount of Darkness, or the period of moonlight and sunlight during the twelve hours from  $18h.$  to  $6h.$ . These small diagrams have four divisions, each representing three hours, and a division is left unblackened if the moon or the sun is above the horizon for at least half of the period it represents. The diagrams for the greater part of the year

are  which reduce to  in the summer.

# TEMPERATURE AND RAINFALL RECORDS.

189

GENERAL: The *maximum temperature* on record of the air in shade is  $134^{\circ}$  Fahr., observed at Greenland Ranch, California, on July 10, 1913.

The *wettest station* in the world is generally allowed to be Cherra Poonjee in Assam, where the official annual average is 424 inches. In Aug. 1841, 264 inches was measured, when 30 inches or more fell on each of five successive days, while on June 14, 1876, a fall of 40.8 inches was measured.

BRITISH ISLANDS: The *maximum temperature* of the air recorded in the shade at 4 feet above the ground is  $100^{\circ}$  Fahr. This was observed at Wilton House, Salisbury, on July 15, 1881, and at Greenwich Observatory on Aug. 9, 1911.

The *lowest temperature* of the air recorded

in the shade at 4 feet above the ground is  $-23^{\circ}$  Fahr., or  $55^{\circ}$  below freezing point, at Blackadder, Berwickshire, on Dec. 4, 1879.

The *greatest rainfall* in a day was at Bruton, Somerset, when 9.56 inches fell in the 24 hours ended 9 a.m., June 29, 1917. This rainfall is equal to 965 tons of water per acre.

The *total rainfall* for a year at Stations in the British Islands during the 66 years 1870 to 1935 ranged from 246.92 inches at Llyn Llydaw (Copper Mill), Carnarvon, and 247.30 inches at the Styte, Cumberland, in 1923, to 9.29 inches at Margate in 1921.

The *maximum wind-velocity* on record in the British Isles was recorded at Scilly on December 6, 1929, when a gust reached the rate of 111 miles per hour.

*Greenwich Mean Time.*

APART from abstract and philosophical considerations, Time, in actual practice, is measured by the rotation of the Earth, and a solar day is the duration of a complete rotation of our sphere round its axis with respect to the Sun, which is rather longer than a rotation with respect to the stars because of the movement of the Earth. The added amount is not constant because of the ellipticity of the Earth's orbit. The length of the Solar day also varies because the axis about which the Earth rotates is not perpendicular to the plane of its orbit. Clocks are adjusted to an average or mean solar day which is of uniform length and is divided into 24 equal hours. This is the basis of Mean Solar Time. The length of the Mean Solar day is constant, but that of the apparent, or the interval from one transit of the Sun across the meridian to the next, varies for the reasons above given. It happens that the longest apparent solar day is about December 22, and the shortest about September 16.

A unit and method of measurement having been established, it is necessary to choose a zero. The zero adopted is the instant when a fictitious body known as the Mean Sun, which is sometimes before, sometimes behind the real Sun, is on some chosen meridian. The time is called the Local Mean Time of any place through which that meridian passes. Usually some standard meridian, such as that of Greenwich, is chosen, and the time of that meridian is used throughout a whole country, and hence the expression Greenwich Mean Solar Time, or, more usually, Greenwich Mean Time, arises (see Zone Standard Time, p. 191).

*Apparent Solar Time.*

The time shown by a sundial is called Apparent Solar Time. It differs from Mean Solar Time by the Equation of Time which is the total effect of the two causes mentioned that make the length of a solar day not uniform, it will be found in the second column of page 2 for each month with a precept for its use.

*The Astronomical Day.*

For purposes of Astronomy the day formerly began at noon, and the hours following noon were numbered successively from 0 to 23. A change was made in 1925, and the Astronomical Day now begins at midnight, the hours being numbered in that way. This has been the practice in this Almanack since 1921.

*Rhythmic Time Signals.*

For the purpose of comparing the time shown by a distant clock with that of the Greenwich standard, signals of the rhythmic, scientific, or Vernier type, issuing primarily from Greenwich are broadcast from the Post Office Wireless Station at Rugby each day at 10h. and 18h. The zero signal is exactly synchronous with a beat of the standard clock, and those that follow are at intervals of 60/61 seconds. The comparison is made by noting the coincidence of a beat of the distant clock, beating seconds, with a signal. If a tick of the clock coincides with the zero signal, it is clear that the clocks differ by an integral number of seconds. If, however, coincidence does not come at the zero signal, but at the *n*th later the difference of the clocks in seconds is that integral number with *n*/61 added.

*Sidereal Time.*

A sidereal day is the duration of a complete rotation of the Earth round its axis with reference to the stars and begins at any place when the First Point of Aries is on that meridian. In

observatory practice time is measured, and the standard clock is regulated, by this rotation of the Earth with respect to the stars, and Mean Solar Time is derived from Sidereal Time by computation. The error and rate of the sidereal clock are found by observing the instant it shows when certain stars, known as Clock Stars, cross the meridian, and comparison of this with the known time of transit (star's R.A.) will give the error of the Sidereal clock, and from this the error of the Mean Solar clock can be found by comparison and computation as below.

The rule for finding the Mean Time of transit of any object from its Right Ascension, or, what is the same thing, of converting Sidereal into Mean Time may be stated thus:—*From the given Right Ascension or Sidereal Time subtract the Sidereal Time at the preceding Noon, and further diminish the result at the rate of 10 secs. per hour, or by the Table on p. 169. If the R.A. should be smaller than the S.T. at noon, 24h. must be added. The final result will be the mean time reckoned from noon, to which 12h. must be added to convert into G.M.T. as now used.*

*Ex.*—At what time will Sirius cross the meridian on August 31? H. M. S.

R.A. of Sirius + 24h. .... 30 42 22  
Sid. Time at Noon, Aug. 30 (subt.) 10 33 3

Interval of Sidereal T. from noon 20 9 19  
Retardation from p. 169 (subt.) ... 3 18

Interval of Mean Time from noon 20 6 1  
G.M.T. of Southing Aug. 31, *morn.* 8 6 1

For stars that transit after noon it would have been necessary to use the Sidereal Time at Noon for August 31.

Mean Time may be converted into Sidereal Time by reversing this process, or otherwise by taking out the G.M.T. of the zero of the Sidereal clock which precedes the Time to be converted, making use of col. 9 on page 2 of the month.

*Ex.*—To find the Sidereal Time corresponding to 8 h. 6 m. 1 s. G.M.T. on Aug. 31. H. M. S.

G.M.T. (U.T.) Aug. 31 ..... 8 6 1  
From col. 9, p. 143 ..... 1 24 45

Interval of Mean T. from 0h. Sid. 6 41 16  
Acceleration from p. 169 (add) ... 1 6

Corresponding Sidereal Time ..... 6 42 22  
*Summer Time.*

In 1916 an Act dated May 17 ordained that during a defined period of that year the legal time for general purposes in Great Britain should be one hour in advance of Greenwich Mean Time. An Act of 1922 (July 20), specified that the period should begin at 2 o'clock G.M.T. in the morning of the day following the third Saturday in April, or if that day is Easter-Day, the day following the second Saturday, and should end at 2 o'clock G.M.T. in the morning of the day next following the third Saturday in September. The Act, renewed in 1924 and 1925, was made permanent (August 7, 1925) and modified by substituting the first Saturday in October for third Saturday in September. The Act applies to Great Britain, Northern Ireland, the Channel Islands, and the Isle of Man. A list of the periods in each year during which Summer Time has been used since its adoption will be found in this Almanack for 1926.

A Summer Time scheme has been tried in other countries with varying success. A list of the countries where it is now used, which may not be complete, is given on page 188.

IN the year 1880 it was enacted by statute that the word "time," when it occurred in any legal document relating to Great Britain, was to be interpreted, unless otherwise specifically stated, as the Mean Time of the Greenwich meridian.\* Other nations similarly used the time of their own capital, but since the year 1883 the system of Standard Time by Zones has been gradually accepted, and now almost throughout the world a Standard Time which differs from that of Greenwich by an integral number of hours, either fast or slow, is used.

A classified list of places where this hourly zone system has been adopted is given below, which comprises, also, those places where the difference from Greenwich Time includes half an hour. Standard Times other than these are not given. In the United States and Canada five standard times are used, these large territories being divided into zones approximately  $7\frac{1}{2}^{\circ}$  on either side of five central meridians. Brazil is divided into three zones in which the times 3, 4, and 5 hours slow on Greenwich are standard respectively. For the Russian territory, hourly zones from 13 hours to 3 hours fast have been adopted (see p. 188).

In the Tonga or Friendly Islands the time 12h. 19m. 12s. fast on Greenwich is used since the Date line passes to the East of them. The time of Aden 2h. 59m. 54s. fast on Greenwich is also standard in British Somaliland. The time of Calcutta is 5h. 53m. 20s. fast; Holland, *oh.* 19m. 32s. fast; British Guiana, 3h. 45m. slow. In Zanzibar Is. clocks are set to 18h. at sunset.

## THE DATE OR CALENDAR LINE.

The line where the change of date occurs as adopted by the British Admiralty is a modification of the  $180^{\text{th}}$  meridian, and is drawn so as to include islands of any one group on the same side of the line, or for political reasons. The line is indicated by joining up the following eight points:—

- |     |   |
|-----|---|
| (1) | Lat. $60^{\circ}$ S., long. $180^{\circ}$ .                     |
| (2) | " $51\frac{1}{2}^{\circ}$ S., long. $180^{\circ}$ .             |
| (3) | " $45\frac{1}{2}^{\circ}$ S., long. $172\frac{1}{2}^{\circ}$ W. |
| (4) | " $15^{\circ}$ S., long. $172\frac{1}{2}^{\circ}$ W.            |
| (5) | " $5^{\circ}$ S., long. $180^{\circ}$ .                         |
| (6) | " $48^{\circ}$ N., long. $180^{\circ}$ .                        |
| (7) | " $52\frac{1}{2}^{\circ}$ N., long. $170^{\circ}$ E.            |
| (8) | " $65^{\circ}$ N., long. $169^{\circ}$ W.                       |

Then through the centre of Bering Strait to a point lat.  $70^{\circ}$  N., long.  $180^{\circ}$ .

## THE AGE OF THE EARTH.

IN the view of science, any date for the "Creation of the World," such as the year 4004 B.C., as adopted by Archbishop Ussher from scriptural chronology, is quite untenable. From the assumption that its heat is sustained solely by contraction of its bulk, Lord Kelvin deduced 20,000,000 years as the time that the Sun has existed, but this is too short to be accepted by geologists whose researches require a considerably longer time for the formation of terrestrial strata. The age of the Earth has been deduced astronomically from the eccentricity of Mercury's orbit, and from the tidal theory of the origin of the Moon. Geologically by various methods, and, since the discovery of radio-activity, from the ratio of the quantities of lead and of radioactive elements in rocks in the Earth's surface, which are held to result from the transmutation of uranium. All the evidence is more or less consistent with the conclusion that the Earth has existed as a planet for a period between 1,500 and 3,000 million years.

## GEOLOGICAL PERIODS.

- I. AZOIC ("Without Life"), containing no trace of life in any form. The duration of this period probably far exceeded that of all the remaining divisions together.
- II. Eozoic ("Dawn of Life"), characterized by the first appearance of animal life.
- III. PALEOZOIC ("Old Life") or PRIMARY, containing traces of extinct animal life:—
  - i. *Cambrian*, exemplified in Wales (Cambria), Cumberland, &c.—the earliest group which possesses a connected suite of fossils.
  - ii. *Ordovician*, exemplified in North Wales and named after the ancient British tribe (Ordovices) inhabiting the region.
  - iii. *Silurian*, named after the ancient British inhabitants (Silures) of S.E. Wales.
  - iv. *Devonian* or *Old Red Sandstone*, from the prevalence of the system as a marine formation in Devonshire.
  - v. *Carboniferous*, including *Coal Measures*, *Millstone Grit* and *Mountain Limestone*.
  - vi. *Permian*, from the Russian province of *Perm*, where these strata are widespread.
- IV. MESOZOIC ("Middle Life") or SECONDARY, with intermediate forms of animal life:—
  - i. *Triassic*, from the three (tri-) divisions of the type formation in Germany.
  - ii. *Jurassic*, typically displayed in the *Jura Mountains*.
  - iii. *Cretaceous*, from the chalky nature of its representatives where first studied.
- V. CAINOZOIC ("New Life") or TERTIARY, containing forms of existing life:—
  - i. *Eocene*, the dawn or beginning of new forms of life, i.e., existing species.
  - ii. *Oligocene*, containing a few still existing species.
  - iii. *Miocene*, containing a minority of existing species—less than 50 per cent.
  - iv. *Pliocene*, the fossil remains show a majority of still existing species.
- VI. QUATERNARY ("Fourth in Order") or POST-TERTIARY:—
  - i. *Pleistocene* or *Glacial*, the greatest number of the remains are those of still existing species. Period of last Great Ice Age.
  - ii. *Recent* or *Post-Glacial*.

Definite dates cannot be assigned to most periods, but G. de Geer has shown that scarcely 9,000 years ago the site of Stockholm was beneath the ice-sheet (VI. i.). Traces of human life are first found in V. iv. (See also below.)

## THE ANTIQUITY OF MAN.

*Pithecanthropus erectus* (Erect Ape-man).—Remains of a skull and of a thigh bone were found in 1891 and 1892 by Professor Dubois, at Trinil, Java. These are held to be remains of a creature of Pleistocene times (see Geological Period, col. i.), about midway between the Orangutan and Man in development.

*Sinanthropus pekinensis* (Peking Man).—A skull found at Choukoutien, 40 miles S.W. of Peking, China (Dec. 2, 1929), is ascribed to the same period as the Java type, but the brain development is greater than the Trinil skull and the brain case much thinner than that of the Piltown skull.

*Australopithecus Africanus* (Erect Man-ape).—A skull was discovered in a limestone deposit at Taungs (Western Cape Colony), in 1925, by Professors Dart and Young of Witwatersrand University. In connexion with this discovery, Sir A. Keith, F.R.S., has declared that traces of human life may yet be discovered in *Miocene* times (see col. i., V. iii.).

*Homo Heidelbergensis* (The Heidelberg Man).—A lower jaw was discovered near Mauer, Heidelberg, in 1907. This is held to be that of a primitive man of the Pleistocene Period.

*The Piltown Skull* (Eo anthropos, or Primitive Man).—Discovered in 1912 at Piltown, Sussex, and ascribed to primitive man of early Paleolithic times.

*Neanderthal Man*.—Remains of a skull and parts of a skeleton found in 1859 in the Neanderthal Ravine, near Düsseldorf, Rhenish Prussia, and others found at Spy, Belgium, in 1884, are held to represent the oldest known dolichocephalic (long-headed) race in Europe, living about 50,000 years before the Christian Era. In 1925 a similar skull was found near Tabgha, Palestine.

*Homo Primigenius*.—Discoveries of interred human remains at Combe Capelle, Dordogne, France (1909), at Brúx and Brúnn, Moravia, and at Galley Hill, Northfleet, Kent (1895) are held to be those of human beings of late Paleolithic times, from 35,000 to 15,000 B.C.

## STAGES OF CIVILIZATION.

The terms employed by ethnologists refer to periods, not of time, but of culture, and are of local application only, there being no universal synchronous sequence in all parts of the world. Races of Europe, Asia and America had reached the Iron Age of development long before the 18th century, A.D., while races in Oceania were still in the Paleolithic (or at least Neolithic) stage at the time of Cook's voyages.

*The Stone Age*.—The ancestors of primitive man are held to have adopted the use of stones of a suitable size for defence, while primitive man made such instruments more effective by sharpening them to a rough point. The earliest period is known as *Eolithic* (or Dawn of the Stone Age), and this

period may have extended to 600,000 years B.C. Weapons of a later period, known as *Paleolithic* (or Old Stone Age), show gradual developments, from the chipped, leaf-shape forms, known as *Chellean* (from Chelles, Seine et Marne, France), and employed, perhaps, from 400,000 to 100,000 B.C., to later and more effective flint points, arrow-heads and spear-heads, flat on one side, known as *Mousterian* (from Le Moustier, where many such implements and other remains were found). The Mousterian period is held to have lasted until about 10,000 B.C., when *Neolithic* (or New Stone Age) weapons, polished and less crudely fashioned, were brought into use for a further period of about 5,000 years. In the Stone Age the burial of the dead was influenced by the primitive nature of the implements available for digging, the graves being only large enough to contain a body huddled together in a cramped position.

*Cultivation of the Soil.*—Cultivation is believed to have followed the interment of the dead about 10,000 B.C., and rendered possible the political (*polis* = city) organisation of mankind. There appears to have been a definite centre of Western civilization at *Nippur* (and elsewhere in Iraq) no later than 6,000 B.C., and in *Egypt*, under the first of the Pharaohs (Menes), about 5,000 B.C. It is not yet known if a similar degree of Eastern civilization had been reached in China, or elsewhere, during (or before) that of Iraq and Egypt.

*The Bronze Age.*—Intercommunication of races introduced a knowledge of the malleable properties of copper, while the spread of commerce distributed tin from Saxony and Cornwall among the races of Europe and Asia. Implements and utensils of cast bronze superseded those of stone, wood, horn or bone. The designs and decorations suggest that this stage of culture was introduced into Europe from Asia, and it must therefore be dated for the East far earlier than for the West, over a period ranging from 5,000 to 2,000 B.C. The Bronze Age appears to have been marked by the cremation of human remains, in place of mere burial in a constricted position.

*The Iron Age.*—Implements of cast bronze were in turn superseded by those of hammered iron at varying dates—in China, Chaldaea, Assyria and Egypt about 4000 B.C.; in South-Eastern Europe about 2000 B.C., spreading over the rest of Europe from 1000 B.C. to 100 A.D., by which time the use of hammered iron was known throughout Scandinavia and in Ireland. It is possible that the Eastern civilization discarded the use of bronze and adopted that of iron even before the West had reached the Bronze Age, and while the remoter parts were still in the Palaeolithic Age. With the Iron Age was re-introduced interment of human remains, in place of Bronze Age cremation, but the bodies were laid at full length in the ground and not huddled up as in the Stone Age.

## THE ROMAN CALENDAR.

Present Days of the Month.	March, May, July, October have thirty-one days.	January, August, December have thirty-one days.	April, June, September, November have thirty days.	February has twenty-eight days, and in Leap Year twenty nine.

## EPOCHS AND CALENDARS.

## THE ROMAN CALENDAR.

*Roman.*—Roman historians adopted as an epoch the Foundation of Rome, which is believed to have happened in the year 753 B.C., and the ordinal number of the year in Roman reckoning is followed by the letters A.U.C. (*Anno Urbis Condite*). The Calendar that we know has developed from one established by Romulus, who is said to have used a year of 304 days divided into ten months beginning with March, to which Numa added January and February, making the year consist of 12 months of 30 and 29 days alternately, with an additional day so that the total was 355. It is also said that Numa ordered an intercalary month of 22 or 23 days in alternate years, making 90 days in eight years, to be inserted after February 23, but there is some doubt as to the origination and the details of the intercalation in the Roman Calendar, though it is certain that some scheme of this kind was inaugurated and not fully carried out, for in the year B.C. 46 Julius Cæsar, who was then Pontifex Maximus, found that the Calendar had been allowed to fall into some confusion. He therefore asked the help of the Egyptian astronomer Sosigenes, which led to the construction and adoption (B.C. 45) of the Julian Calendar, and, by a slight alteration, to the Gregorian now in use. The year B.C. 46 was made to consist of 445 days, and is called the *Year of Confusion*. In the Roman (Julian) Calendar the days of the month were counted backwards from three fixed points, or days, and an intervening day was said to be so many days *before* the next coming point, the first and last being counted. These three points were (1) the Kalends; (2) the Nones, and (3) the Ides. Their positions in the months and the method of counting from them will be seen in the Table on p. 193.

## THE CHRISTIAN CALENDAR.

In the Christian chronological system the years are distinguished by cardinal numbers before or after the Incarnation, the period being denoted by the letters B.C. (Before Christ) or, more rarely, A.C. (*Ante Christum*), and A.D. (*Anno Domini*). The correlative dates of the epoch are the 4th year of the 194th Olympiad, the 753rd year from the Foundation of Rome, 3761 A.M. (Jewish Chronology), and the 4714th year of the Julian Period. This was introduced into Italy in the sixth century, and though first used in France in the seventh it was not universally established there until about the eighth century. It has been said that the system was introduced into England by St. Augustine (A.D. 596), but was probably not generally used until some centuries later. It was ordered to be used by the Bishops at the Council of Chelsea, A.D. 816. The actual date of the birth of Christ is somewhat uncertain. December 25, B.C. 4, is supported by several lines of argument.

*Old and New Style.*—In the Julian Calendar all the centennial years were leap years, and for this reason towards the close of the sixteenth century there was a difference of 10 days between the tropical and calendar years; or, in other words, the equinox fell on March 11 of the Calendar, whereas at the time of the Council of Nice, A.D. 325, it had fallen on March 21. In 1582 Pope Gregory ordained that Oct. 5th should be called Oct. 15th, and that of the end-century years only the fourth should be a leap year (*see above*). This change was adopted

by Italy, France, Spain, and Portugal in 1582; by Prussia, the German Roman Catholic States, Switzerland, Holland, and Flanders on Jan. 1, 1583, Poland 1586, Hungary 1587, the German and Netherland Protestant States and Denmark 1700, Sweden (gradually) by the omission of eleven leap days, 1700–1740; Great Britain and her Dominions (including the North American Colonies) in 1752, by the omission of eleven days (Sept. 3 being reckoned as Sept. 14). This *Gregorian Calendar* was adopted by Japan in 1872, China in 1912, Bulgaria in 1915, Turkey and Soviet Russia in 1917, by Yugoslavia and Rumania in 1919, and by Greece in February, 1923. The Russian, Greek, Serbian and Rumanian Churches did not abandon the Julian Calendar until May, 1923, when the Gregorian, slightly modified, was adopted. The difference between the Old and New Styles was 11 days after 1700, 12 days after 1800, and has been 13 days since 1900. It should be added that the word *style* actually connotes the date of the beginning of the year. It happened that a change of the latter from March 25 to January 1 was made in England in 1752, the year in which the change from Julian to Gregorian Calendar was made, and for that reason the words Old and New Style have been used in a sense which is not strictly correct, but nevertheless expressive.

*The Day, Week and Month.*—Measurements of time are based on the times taken by the earth to rotate on its axis; by the moon to revolve round the earth; and by the earth to revolve round the sun. From these, which are not commensurable, certain average or mean intervals have been adopted for ordinary use. Of these the first is the *Day*, which begins at midnight and is divided into 24 hours of 60 minutes, each of 60 seconds. The hours are counted from midnight up to 12 at noon, and again from noon up to 12 at midnight, except when the *Twenty-four Hour* reckoning is employed. The 24-hour reckoning ignores A.M. and P.M., and the hours are numbered 0 to 23 from midnight to midnight.

For the *Astronomical Day*, *see* p. 190

The *Week* is a period of 7 days.

The *Month* in the ordinary calendar is approximately the twelfth part of a year, but the lengths of the different months vary.

The *Equinoctial or Tropical Year* is the time that the earth takes to revolve round the sun from equinox to equinox, or 365.2422 mean solar days. The *Calendar Year* consists of 365 days, but a year the date of which is divisible by 4, without remainder, is called *Leap Year* and consists of 366 days. The last year of a century is not leap year unless its number is divisible by 400 (e.g. the years 1800 and 1900 had only 365 days).

*New Year's Day.*—In England in the seventh century, and as late as the thirteenth, the year was reckoned from Christmas Day, but in the twelfth century the Anglican Church began the year with the Feast of The Annunciation of the Blessed Virgin (Lady Day) on the 25th March, and this practice was adopted generally in the fourteenth century. The Civil or Legal year in the British Dominions (exclusive of Scotland), as opposed to the Historical, which already began on Jan. 1, began with "Lady Day" until 1752. But in and since 1752 the civil year has begun with Jan. 1. Dividends are still paid by the Bank of England on dates based on Old Style. The

Income Tax year begins on April 6 in accordance with Act of Parliament (39 Geo. III. 1798). New Year's Day in Scotland was changed from Mar. 25 to Jan. 1 in 1600. On the Continent, Jan. 1 was adopted as the first day of the year by Venice in 1522, Germany in 1544, Spain, Portugal and the Roman Catholic Netherlands in 1556, Prussia, Denmark and Sweden in 1559, France 1564, Lorraine 1579, Protestant Netherlands 1583, Russia 1725, Tuscany 1751.

*The Longest Day.*—The longest day measured from sunrise to sunset at any place is the day on which the Sun attains its greatest distance from the Equator, north or south, accordingly as the place is in the northern or southern hemisphere; in other words, it is the day of the Calendar on which a Solstice falls. If a Solstice falls on June 21 late in the day, by Greenwich Time, that day will be the longest of the year at Greenwich, though it may be by only a second of time or a fraction thereof, but it will be on June 22 (local date) in Japan, and therefore June 22 will be there the longest day and at places in Eastern longitudes.

But leaving this question of locality and confining consideration to Greenwich, the Solstices are events in the Tropical Year whose length is  $365\frac{1}{4}$  days less about 11 minutes, and therefore, if a Solstice happens late on June 21 in one year, it will be nearly six hours later in the next, or early on June 22, and that will be the longest day. This delay of the Solstice is not permitted to continue because the extra day in leap year brings it back a day in the Calendar, and at the present time two of the four years in the leap year cycle have the longest day on June 21, two on June 22.

Because of the 11 minutes above mentioned the additional day in leap year brings the Solstice back too far by 44 minutes, and the time of the Solstice in the calendar is earlier as the century progresses, being about 18 hours too soon at the end of the hundred years.

To remedy this the last year of a century is in most cases not a leap year, and the omission of the extra day puts the date of the Solstice later by about six hours too much, compensation for which is made by making the fourth centennial year a leap-year.

Some special cases that follow from these general principles may be noted. In 1897 the Solstice happened at 4 o'clock in the morning of June 21 by Greenwich time. Hence by California local time it would have been on June 20, which would have been the longest day in that place. In 1903 the time of the Solstice was 3 o'clock in the afternoon of June 22, so that in distant eastern longitudes the longest day would have been June 23.

*The Shortest Day.*—Similar considerations apply to the shortest day of the year, or the day of the Winter Solstice. At the present time this is December 22 in every year (Greenwich date), but later in the century in some years it will be December 21. The difference due to locality also prevails in the same sense as for the longest day. In the year 1935, for example, the Solstice fell on Dec. 23 by local time of a place in distant eastern longitude, whereas in the year 1937 it occurs on Dec. 21, by the time of a place more than 6 hours of longitude west of Greenwich, and these are the dates of the shortest day in such localities.

At Greenwich the Sun sets at its earliest by the clock, about ten days before the shortest

day, which is a circumstance that may require explanation. The daily change in the time of sunset is due in the first place to the Sun's movement southwards at this time of year, which diminishes the interval between the Sun's southing or Apparent noon, and its setting, and, secondly, because of the daily decrease of the Equation of Time subtractive from Apparent time, which causes the time of Apparent noon to be continuously later, day by day, and so in a measure counteracts the first effect. The rates of the resulting daily acceleration and retardation are not equal, nor are they uniform, but are such that their combination causes the date of earliest sunset to be Dec. 13 or 14 at Greenwich. In more southerly latitudes the effect of the movement of the Sun is less, and the change in the time of sunset depends on that of the Equation of Time to a greater degree, and the date of earliest sunset is earlier than it is at Greenwich.

*Golden Number.*—In the year 432 B.C. Meton, an Athenian astronomer, found that 235 Lunations are very nearly, though not exactly, equal in duration to 19 Solar Years, and hence, after 19 years the Phases of the Moon recur on the same days of the month (nearly). This was held to be of so great importance that the dates of Full Moon in a cycle of nineteen years were inscribed in figures of gold on public monuments in Athens. The Cycle of nineteen years is called the *Metonic Lunar Cycle*, and the number showing the position of a year in the Cycle is called the *Golden Number* of that Year.

*Epact.*—The age of the calendar Moon on Jan. 1 in each year, formerly used in determining the date of Easter.

*Solar Cycle.*—A period of twenty-eight years, in any corresponding year of which the days of the week recur on the same days of the month.

*Julian Period.*—Proposed by Joseph Scaliger in 1582. The period is 7980 Julian years, and its first year coincides with the year 4713 B.C. 7980 is the product of the number of years in the Solar Cycle, the Metonic Cycle and the cycle of the Roman Indiction ( $28 \times 19 \times 15$ ). The Julian Day, as used in astronomy, begins at noon.

*Roman Indiction.*—A period of fifteen years, instituted for fiscal purposes about A.D. 300.

*The Dominical Letter* is one of the letters A-G which are used to denote the Sundays (Lord's Day) in successive years. If the first day of the year is a Sunday the letter is A; if the second, B; the third, C; and so on. Leap year requires two letters, the first for Jan. 1-Feb. 29, the second from March 1-Dec. 31.

*Easter-Day* is the first Sunday after the full moon which happens upon, or next after the 21st day of March; and if the full moon happens upon a Sunday, Easter-Day is the Sunday after. This definition is contained in an Act of Parliament (24 Geo. II., cap. 23), and explanation is given in the preamble to the Act that the day of Full Moon depends on certain tables that have been prepared. These are the tables whose essential points are given in the early pages of the Book of Common Prayer. The Moon referred to is not the real moon of the heavens, but a hypothetical Moon on whose "Full" the date of Easter depends, and the lunations of this "Calendar" Moon consist of twenty-nine and thirty days alternately with certain necessary modifications to make the date of its Full agree as nearly as possible with that of the real Moon, (*Paschal Full Moon*.)

A TABLE OF EASTER DAYS AND SUNDAY LETTERS  
FROM THE YEAR 1500 TO 2000.

		1500—1599	1600—1699	1700—1799	1800—1899	1900—2000

## THE JEWISH CALENDAR.

"AND let them be for signs and for seasons, and for days and for years." (Genesis i. 14): "He appointed the moon for seasons" (Psalm civ. 19). There is therefore Divine authority for the use of the Sun and Moon as a basis for our record of the sequence of events, or in other words, the calendar. The story that the Flood began on the seventeenth day of the second month (Gen. vii. 11); that after the end of the hundred and fifty days the waters were abated, and that on the seventeenth day of the seventh month the ark rested on Ararat indicates a calendar of some kind, and that the writers recognised thirty days as the length of a lunation. There is other mention of months by their ordinal numbers in the book of Genesis and in other of the early Scriptures, and in establishing the rite of the Passover Moses speaks of Abib as the month when the Israelites came out from Egypt, which was to-be the first month of the year (Exodus xiii. 4; xii. 2). In the book Kings I. three months are mentioned by name, Zif the second month, Ethanim the seventh, and Bul the eighth (Chaps. vi. 1, 37, viii. 2, vi. 38), but none of these are names now in use. After the captivity in Babylon the Hebrews apparently called the months by the names now adopted, for Nisan which is called the first month, and therefore identical with Abib, and six others are mentioned in one or more of the books of Esther, Nehemiah, Zechariah and Maccabees. Five of these six are also distinguished by their ordinal number as well as by their modern names, but the remaining five months of the year are not referred to either in the Sacred books or in the Apocrypha.

The origin of these names is said by some to be Chaldean, but is more probably Syriac. The statement about certain officers of Solomon's household, twelve in number, each of whom acted for one month in a year (I. Kings iv. 7), show that the Jewish year consisted usually of twelve months, though others that refer to yearly harvests, and such events, imply that the year was solar as well as lunar. There is, however, no mention in the Bible of an intercalated month, or its equivalent.

The Passover was to begin on the fourteenth day of Abib, or the Abib as it is generally called, and other ceremonies were similarly ordained for certain days in other months; consequently it was necessary to determine the beginning of the month, or, the New Moon, which was done from the first, it is believed, by actual observation. There is no instruction in the Scriptures as to how this was to be done, but it is likely that the first day of the month was that on which the crescent became visible, which was proclaimed by the sound of silver trumpets (Numbers x. 10). There is good evidence that after the Captivity and in the later years of the Jewish kingdom much care was bestowed on the determination of the New Moon by observation. Men of good repute were chosen as watchers, who looked for the first appearance of the crescent from advantageous positions and reported to members of the Sanhedriu, who questioned them as to the shape of what they had seen, and thus determined a date of New Moon that was circulated by runners to places within a certain distance of Jerusalem. It is not known that any attempt was made by these elders to estimate the actual time of conjunction. It is possible, but there

is no evidence on the point, that they were charged with the duty of saying when a month should be intercalated.

The method of determining the days of New Moon above indicated was continued in Palestine, but after the Dispersion Jewish communities in other lands were left in some doubt as to the times of Fasts and Festivals, and this led to the formation of the Jewish Calendar as used today which, it is said by some, was done in A.D. 358 by Rabbi Hillel II., a descendant of Gamaliel—though some assert that it did not happen until much later. This calendar is luni-solar, and is based on the lengths of the lunation and of the tropical year as found by Hipparchus (Circa 120 B.C.), which differ little from those adopted at the present day (see p. 198). The years are divided into cycles of 19 because 235 of such lunations are almost precisely equivalent in length to 19 tropical years. The normal calendar year, called a Common Regular year, consists of 12 months of 30 days and 29 days alternately. Since 12 months such as these comprise only 354 days in order that each of them shall not diverge greatly from an average place in the solar year, a thirteenth month is occasionally added after the fifth month of the Civil year, or as the penultimate month of the Ecclesiastical, the years when this happens being called Embolismic. Of the 19 years that form a cycle, 7 are embolismic; they occur at places in the cycle indicated by the numbers 3, 6, 8, 11, 14, 17, 19, these places being chosen so that the accumulated excesses of the solar years should be as small as possible. Tishri is the first month of the Civil year. The first of each month is called the day of New Moon, though it is not necessarily the day of astronomical New Moon, that being the day on which conjunction of Sun and Moon occurs, but there is generally a difference of a day or two, for reasons depending on circumstances such as those to be immediately stated. The dates in the Christian calendar of the first days of the months depend on that of the first of Tishri, which therefore controls the dates of fasts and festivals in the Jewish year. For certain ceremonial reasons connected with these, the first of Tishri must not fall on a Sunday, Wednesday or Friday, and if this should happen as the result of the computation it is postponed to the next day in the Christian calendar. Also, if the New Moon of Tishri falls on any day of the week at noon or later than noon, then the following day is to be taken for the celebration of that New Moon and is Tishri 1, provided that it is not one of the forbidden days, in which case there is a further postponement of a day. These rules and others have been considered in detail, and finally a calendar scheme has been drawn up in which a Jewish year is of one of the following six types:—

	Days.
Common Deficient having .....	353
Common Regular having .....	354
Common Abundant having .....	355
Embolismic Deficient having .....	383
Embolismic Regular having .....	384
Embolismic Abundant having .....	385

In an Abundant year, whether Common or Embolismic, Marheshvan, the second month of the Civil year, has 30 days instead of 29; in Deficient years Kislev, the third month, has 30 instead of 29. The additional month in Embolismic years which is called Adar I., and precedes the

month called Adar in common years and Adar II., or Ve-Adar, in embolismic, always has 30 days, but neither this, nor the other variations mentioned, are allowed to change the number of days in the other months which still follow the alternation of the normal twelve.

These are the main features of the Jewish Calendar which must be considered permanent, because as a Jewish law it cannot be altered except by a great Synhedrion. Some minor but important points may be mentioned.

The time used is that of the meridian of Jerusalem, which is 2h. 21m. in advance of Greenwich time.

The Jewish day begins at Sunset, which for computations of the Calendar is assumed to begin at 6 p.m. by time of Jerusalem.

In a month that follows one of 30 days, the day preceding its first day is also observed as the day of New Moon, the reason for this being somewhat obscure.

The Jews held that the world was created at the time of the Autumnal Equinox in the year 3760 B.C. or year 954 of the Julian Period, and the epoch or starting point of Jewish Chronology corresponds to October 7 B.C. 3761. Thus the year 1937 A.D. is *Annus Mundi* 5697-98 in the Jewish Calendar:—

(Part of A.M. 5697 and A.M. 5698.)

Tishri 1 Rosh Hashanah (New Year) Sept. 26

\* The previous day is also observed as the day of the New Moon.

Note.—The day of the Jewish Calendar begins at sunset on the day previous to that of date.

#### THE MUHAMMADAN CALENDAR.

It appears to be certain that from very ancient times till shortly after the beginning of the fifth century of the Christian Era the pagan Arabians made use of a purely lunar year. The pilgrimage to Mecca which was a custom with them was always made in the twelfth month of the year, but inasmuch as the lunar year of twelve months is eleven days shorter than the solar year, the time of the pilgrimage ran through all the seasons, which was found to be inconvenient for reasons connected with the harvest, and to obviate the inconvenience the Arabians formed a luni-solar year by adding a thirteenth month from time to time. This scheme that they had learned from the Jews was adopted in A.D. 412, two hundred years before Islam, or when the Muslim religion was introduced by Muhammad.

Certain months were with the Arabians treated as sacred, and when the Prophet established his religion he pronounced that the luni-solar year which involved a transference of the sacred character from one month to another was an infidelity. Consequently return was made to the earlier practice, and the Muhammadan calendar was formed about A.D. 632, as it remains to-day, on a purely lunar basis and does not depend on the solar year. The year is made up of 12 months, alternately 30 and 29 days in length, the first month of the year having 30 days. It was found necessary to increase the length of some of these years to ensure that the date of the first of the month, or the New Moon of the Muhammadan calendar, should agree, at least approximately, with the date of the actual New Moon. This is done by adding a day to the last month, which therefore has 30 days, in each of 11 years. The years selected are those in the cycle numbered 2, 5, 7, 10, 13, 16, 18, 21, 24, 26, 29, and are called *Kabisah*.

The dates of New Moon thus determined approximate to, but do not always agree with those of the Jewish Calendar (*see above*).

Some adherents of the Muslim faith still take the date of the evening of the first visibility of the crescent as that of the first of the month.

The Muhammadan Epoch is based on the Hegira or Flight of Muhammad from Mecca to Medina. The first day of the Era is not the actual day of the Flight but is 16th July, 622 A.D. The Muhammadan year begins earlier year by year, according to Gregorian dates, by 10, 11 or 12 days. The year 1937 is 1355-56 of the Hegira.

#### OTHER EPOCHS AND CALENDARS.

*Abyssinian.*—The Ethiopian people use the Coptic Calendar with the numeration of the years based, *not* on the Era of Diocletian but on an epoch seven or eight years later than that of the Christian Calendar. The Ethiopian year 1928 began on 1935 September 12.

*Armenian.*—The Armenians marked their secession from the Greek Church by adopting it as their epoch. This corresponds to 9th July, 552 A.D.

*Babylonian.*—In the eighth century B.C. the Babylonians began a chronology with the era of the accession of the founder of their Empire, Nabonassar, 26th February, 747 B.C.

*Biblical.*—The Christians of Western Europe made many calculations concerning the date of the Creation of the World, based upon the genealogical tables in the Old Testament. In the seventeenth century (1650) James Usher, Archbishop of Armagh, published his *Annales Veteris Testamenti*, and Usher's Notation was afterwards printed in marginal notes to the Authorised Version of the English Bible. Usher's Notation placed the Creation of the World in 4004 B.C.

*Chinese.*—Until the year 1911 A.D. a Lunar Calendar was in force in China, but with the establishment of the Republic the Government adopted the Gregorian Calendar, and the new and old systems were used simultaneously by the people for several years. Since 1930 the publication and use of the old Calendar have been banned by the Government, and an official Chinese Calendar, corresponding with the European or Western system, is compiled by the Academia Sinica at Nanking. It is believed, however, that the old Lunar Calendar is still in use to some extent.

*Coptic.*—In the Coptic Calendar, which is used by part of the population of Egypt and Ethiopia, the year is made up of 12 months of 30 days each, followed, in general, by 5 complementary days. Every fourth year is an Intercalary or Leap-year, and in these years there are 6 complementary days. The Intercalary year of the Coptic Calendar immediately precedes the Leap-year of the Julian Calendar. The Era is that of Diocletian or the Martyrs, the origin of which is fixed at A.D. 284, August 29 (Julian date). A Coptic Calendar for part of the year 1653 and the year 1654 is appended:—

Year 1653.	A.D. 1937.	Year 1653.	A.D. 1937.
Tubāh .....	Jan. 9	Abīb .....	July 8
Amshīr .....	Feb. 8	Masrī .....	August 7
Barmahāt .....	March 10	Complement-	
Barmūdāh .....	April 9	ary days .....	Sept. 6-10
Bashuns .....	May 9	Year 1654.	
Būnah .....	June 8	Tūt .....	Sept. 11

*Hindu.*—In addition to the Muhammadan reckoning there are six eras used in India. The principal astronomical system was the *Kali-yuga Era*, which appears to have been adopted in the fourth century A.D. It began on 18 February, 3102 B.C. The chronological system of Northern India, known as the *Vikrama Samvat Era*, prevalent in Western India, began on 23 February, 57 B.C. The year 1937 A.D. is, therefore, the year 1994 of the Vikrama Era. In Southern India, the *Saka Era*, with its epoch of 3 March, A.D. 78, was probably founded by Kanishka (whose sway was widely extended), and is in general use. The year 1937 A.D. is 1849 of the Saka Era. In the Hills, the *Saptarshi Era* dates from the moment when the Saptarshi, or saints, were translated and became the stars of the Great Bear in 3076 B.C.

There are many obsolete eras in the history of the Indian Peninsula. The principal religious systems of chronology were those of the Buddhists and the Jains. The *Buddhists* reckoned from the death of Buddha in 543 B.C. (the actual date being 487 B.C.); and the epoch of the *Jains* was the death of Vardhamana, the founder of their faith, in 527 B.C.

*Japan.*—The Japanese Calendar is the Gregorian, and is essentially the same as that in use by western nations, the years, months and weeks being of the same length as, and beginning on the same days as, those of the British Calendar. But the numeration of the years is different. Japanese chronology is based on a system of epochs or periods, each of which begins at the accession of an Emperor or other important occurrence, the method being somewhat similar to the British system of Regnal years, but differs from it in the particular that each year of a period closes on December 31. The Japanese scheme begins about 650 A.D. The three latest epochs are defined by the reigns of Emperors, whose actual names are not necessarily used:—

Epoch Meiji from 1868	to 1912 July 31
" Taishō " 1912 Aug. 1	to 1926 Dec. 25
" Shōwa " 1926 Dec. 26	to ...

Hence the year Shōwa 11 began 1936 Jan. 1. The months are not named. They are known as First Month, Second Month, &c., first month being the equivalent to January. The days of the week are Nichiyōbi (Sun-day), Getsuyōbi (Moon-day), Kwayōbi (Fire-day), Suiryōbi (Water-day), Mokuyōbi (Wood-day), Kin'yōbi (Metal-day), Doyōbi (Earth-day).

The equivalent of 1937 September 29 is Shōwa 12, *gm. 29d.*, of 1938 January 1, Shōwa 13, *1m. 1d.*

*Olympiads.*—Greek chronology was reckoned in cycles of four years corresponding with the periodic Olympic Games held on the plain of Olympia, in Elis, once in four years; the intervening years being the first, second, &c., of the Olympiad, which received the name of the victor at the Games. The first recorded Olympiad is that of Choroebus, 776 B.C.

*Persian.*—The chronology of Persia, which is still followed by the Parsees of India, dates from the accession of Yazdegerd III. to the throne on 10th June, 632 A.D. The year 1304 of the Parsees began on 1935 March 21.

THE *Superficial Area* of the Earth is estimated to be 196,550,000 square miles, of which 55,500,000 square miles are land and 141,050,000 square miles Water. The *Diameter* of the Earth at the Equator is 7,920½ English miles, and at the Poles 7,900 English miles. The *Equatorial Circumference* is 24,901·8 English miles, divided into 360 Degrees of Longitude, each of 69·17 English (or 60 Geographical) miles; these Degrees are measured from the Meridian of Greenwich, and numbered East and West of that point to meet in the Antipodes at the 180th Degree. Distance North and South of the Equator is marked by Parallels of Latitude, which proceed from zero (at the Equator) to 90° at the Poles.

#### AREA AND POPULATION.

Continent.	Area in Square Miles.	Estimated Population (1931).
Europe .....	3,750,000	550,000,000
Asia .....	17,000,000	1,044,000,000
Africa .....	11,500,000	150,000,000
North America...	8,000,000	170,000,000
South America...	6,800,000	74,000,000
Oceania .....	3,450,000	9,000,000
Polar Regions ...	5,000,000	...
	55,500,000	1,997,000,000

The British Dominions extend over the largest area (14,000,000 sq. miles); the U.S.S.R. is second (8,250,000 sq. miles); France is third, with 4,336,000 sq. miles; the United States, with its Insular Jurisdiction, &c., covers 3,750,000 sq. miles; Brazil 3,220,000 sq. miles, and China 3,000,000 sq. miles.

#### THE CONTINENTS.

*Europe* forms about one-fourteenth of the land surface of the globe. Its length from the North Cape, 71° 12' N., and Cape Matapan, in the south of Greece, 36° 23' N., is about 2,400 miles, and its breadth from Cape St. Vincent to the Urals is about 3,300 miles. The political boundary between Europe and Asia extends some distance beyond the Urals, to include the mining regions; in the south-east it follows the valley of the Manych, north of the Caucasus.

*Asia* extends over nearly one-third of the land surface of the globe. The distance between its extreme longitudes, the west coast of Asia Minor (26° E.) and the East Cape (170° W.), is 6,000 miles. The extreme latitudes, Cape Chelyuski (78° 30' N.) and Cape Buru (90 miles north of the Equator), are 5,350 miles apart. Asia is bounded by the ocean on all sides except the west. The Isthmus of Suez connects it with Africa. The land boundary between Europe and Asia is formed on the west mainly by the Ural Mountains and the Ural River. In the south-west the valley of the Manych, which

stretches from the Caspian Sea to the mouth of the Don, is now taken as the line between the two continents, although the Caucasus was formerly considered as belonging to Europe. The islands of the archipelago which lies in the south-east between the continents of Asia and Australia may be divided into two groups by a line passing east of Timor, Timor Laut, the Kei Islands and the Moluccas.

*Africa* is about three times the area of Europe. Its extreme longitudes are 17° W. at Cape Verde and 51° 27' 52" E. at Ras Hafun. The extreme latitudes are Cape Blanco in 37° N. and Cape Agulhas in 35° S., at a distance of about 5,000 miles. It is surrounded by seas on all sides, except in the narrow isthmus through which is cut the Suez Canal, and may be considered as a great peninsula of the Eurasian continent.

*North America*, including Mexico, is a little less than twice the size of Europe. Its extreme longitudes extend from a little west of 170° W. to 52½° W. in the east of Newfoundland, and its extreme latitudes from about 80° N. lat. to 15° N. lat. in the south of Mexico. It is surrounded by seas on all sides except in the south, where it joins the Isthmian States of *Central America*, which have an area of about 200,000 square miles. The area of the *West Indies* is about 65,000 square miles, a little more than half that of the United Kingdom. They extend from about 27° N. latitude to 10° N. latitude.

*South America* is a little more than 1½ times the size of Europe. The extreme longitudes are Cape Branco 35° W. and Punta Parina 81° W., and the extreme latitudes, Punta Gallinas, 12½° N. and Cape Horn 56° S. South America is surrounded by the ocean, except where it is joined to Central America by the narrow isthmus through which is cut the Panama Canal.

#### THE RACES OF MANKIND.†

The Races of Mankind are divisible according to Stock or, less scientifically, according to Colour. The Dominant Colour is Yellow—the numerical order being (1) Yellow, (2) White, (3) Black, (4) Brown, (5) Red. The main Divisions of the Races are as follows:—

Division.	Area.	Estimated Number.
Mongolian .....	Asia .....	680,000,000
Caucasian .....	Europe & Orient .....	725,000,000
Negro .....	Africa .....	210,000,000
Semitic .....	North Africa ...	100,000,000
Malayan .....	Oceania, &c. ...	104,500,000
Red Indian, &c.	America .....	30,000,000
		1,849,500,000

\* The Earth is a *Sphere*, with a Northern and Southern *Hemisphere*; the Ocean surface is the *Hydrosphere*, and the gaseous envelope the *Atmosphere*, of which the lower layers are the *Troposphere* and the upper the *Stratosphere*. The science concerned with the study of the Earth's crust is *Geology*, with the measurement of its surface *Geodesy*; the study of its surface is *Geography*, and of its superficial features *Physiography*. The study of the hydrosphere is *Oceanography*, of the lakes *Limnology*, and of the mountains *Ornography*, of the Races of Mankind *Ethnology*, of their location *Ethnography* of extinct organic life *Paleontology*, and of existing life *Biology*.

An airship with a constant speed of 100 miles an hour would take nearly 105 years to reach the Sun. The velocity of a given point of the Earth's surface at the Equator exceeds 1,000 miles an hour (24,901·8 miles in 24 hours); the Earth's velocity in its orbit round the Sun is about 66,600 miles an hour (584,000,000 miles in 365 days 6 hours 9 minutes).

† It has been estimated that the Earth can maintain a population of 6,000,000,000, a total which will be reached about A.D. 2100, at the present rate of increase.

# DISTANCE OF THE HORIZON.

THE limit of distance to which one can see varies with the height of the spectator. The greatest distance at which an object on the surface of the sea, or of a level plain, can be seen by a person whose eyes are at a height of 5 feet from the same level is nearly 3 miles. At a height of 20 feet the range is increased to nearly 6 miles, and an approximate rule for finding the range of vision for small heights is to increase the square root of the number of feet that the eye is above the level surface by a third of itself, the result being the distance of the horizon in miles, but is slightly in excess of that in the table below, which is computed by a more precise formula. The table may be used conversely to show the distance of an object of given height that is just visible from a point in the surface of the earth or sea. Refraction is taken into account both in the approximate rule and in the Table.

At a height of	the range is	At a height of	the range is	At a height of	the range is
5 ft. ....	2'9 miles.	500 ft. ....	29'5 miles.	4,000 ft. ....	83'3 miles
20 " ....	5'9 " "	1,000 " ....	41'6 " "	5,000 " ....	93'1 " "
50 " ....	9'3 " "	2,000 " ....	58'9 " "	20,000 " ....	186'2 " "
100 " ....	13'2 " "	3,000 " ....	72'1 " "		

## OCEAN AREAS AND DEPTHS.

The greatest known Ocean Depth (in the Pacific, off Mindanao, 35,410 feet) is not much greater than the greatest land height (in the Himalayas); but the mean depth of the Ocean floor exceeds 12,000 feet, while the mean height of the surface of the land area of the Earth above sea level is only 2,300 feet. The following table gives the areas of the principal oceans and seas, with the greatest known depth of each:—

Name.	Oceans.	
	Area of Basin sq. miles	Greatest Depth feet
Pacific .....	63,986,000	Off Mindanao, 35,410
Atlantic .....	31,530,000	Porto Rico Trench, 27,962
Indian .....	28,350,000	Sunda Trench, 22,968
Arctic .....	5,541,600	North Polar, 13,200
<i>Seas.</i>		
Malay .....	3,137,000	Kei Trench, 21,342
Central American .....	1,770,170	Caribbean, 20,568
Mediterranean .....	1,145,000	Pola Deep, 12,276
Behring .....	878,000	Buldir Trough, 13,422
Okhotsk .....	582,000	Kurile Trough, 10,554
East China .....	480,000	about 10,500
Hudson Bay .....	472,000	about 1,500
Japan .....	405,000	about 10,200
Andaman .....	305,000	about 11,000
North Sea .....	221,000	Skagerrak, 1,998
Red Sea .....	178,000	20' N., 7,254
Baltic .....	158,000	about 1,200

## THE HIGHEST MOUNTAINS.

The following list contains the principal peaks of such ranges as the Himalayas and the Andes, and the highest mountains in other ranges.

Name.	Range.	Height in Feet.

## The League of Nations.

THE League of Nations came into being when the Treaty of Peace with Germany was ratified on January 10, 1920. Its Charter, containing 26 Articles, is known as the *Covenant*, which contains clauses on the prevention and settlement of disputes. These clauses bind nations who are members of the League not to employ force for the settlement of a dispute until they have first submitted it to the League of Nations (or to arbitrators or to judges). The right to resort to war was hitherto retained in case the League, or the arbitrators, failed to reach a unanimous decision, but even so, only after a delay of three months after such failure. And this right has been abandoned by all the 60 States who have signed the Kellogg Pact.

The *Membership* of the League comprises at present 54 nations, or three-quarters of the whole World, the British Empire and the Dominions (including the Irish Free State, together with India) being each an independent member, with separate voting power and representation. Japan and Germany withdrew from the League in 1933. The U.S.S.R. and Afghanistan were admitted in 1934. The U.S.A., while holding aloof, is co-operating with the League in a number of beneficent activities.

The *Work* of the League is many-sided, and is constantly growing. It includes the prevention of a number of wars, the creation of the Permanent Court at the Hague as an alternative for war, positive reconstruction as in the case of the financial restoration of Austria, Hungary, and Northern Greece, the outlining of an important new policy of "freer" trade, improvements in international traffic and health, progress in real control of the traffic in drugs and in women, and child welfare.

### ORGANISATION OF THE LEAGUE.

The *Assembly* meets annually at Geneva about September 10, and consists of 3 representatives from every Member State, each State having one vote.

The *Council* meets three times a year. Great Britain, France, Italy and U.S.S.R. are permanent members, and at present 10 other States are annually elected as temporary members. These are Poland, Rumania, Ecuador, Spain, Denmark, Argentina, Australia, Portugal, Chile and Turkey.

The *Secretariat* is the permanent Civil Service of the League, at Geneva, and is composed of nationals of nearly all Member States.

*Secretary-General*, J. Avenol (*French*).

*Deputy Secretaries-General*, M. Pilotti (*Italian*), Sean Lester (*Irish Free State*).

*Under Secretaries-General*, F. Walters (*British*), M. Rosenberg (*U.S.S.R.*).

*Information Section*, Arthur Sweetzer (*American*), *Acting Director*.

The *Technical Organisations and Commissions*, which act as expert advisers to the Council and Assembly, are continually handling questions concerning International Communication and Transit, Economics and Finance, Health, Mandates, and the Reduction of Armaments. No week passes without these bodies discussing international questions of wide interest, or without some conference being held at Geneva and

achieving or pointing the way to further constructive work in international co-operation.

The *Permanent Court of International Justice*, consisting of fifteen Judges and four Deputy Judges, chosen for their high legal and moral authority, sits at the Hague and deals by means of opinions and judgments with all disputes referred to it regarding International Law, breaches of International obligations, and the interpretation of treaties. It has already dealt with 43 disputes, some of which might have led to an open breach between the States concerned. It has already won a great reputation both in the Foreign Offices and in the legal professions of the world. The Court now sits all the year round.

The *International Labour Office* is closely connected with the League, but has a parallel organisation of its own at Geneva, which was also set up by the Peace Treaty. The Governing body consists of twelve representatives of Governments, of which eight (including Great Britain, Canada and India) are chosen as being of chief industrial importance in the world, six employers' and six workers' representatives. They are assisted by an international Secretariat, which collects and disseminates information and organises conferences. The conferences, to which Governments, Employers' and Workers' Organisations send delegates, pass Conventions or Recommendations which Governments ratify if they so desire. 33 Conventions have been adopted; ratifications number nearly 500. The main object in view is to bring up the standard of labour in the less advanced States to the level of the standard in countries where greater progress has been made, while losing no opportunity to raise even the best existing standards where practicable. The Director of the International Labour Office is H. B. Butler (*British*). There is a London Office at 12 Victoria Street, S.W.1.

### COST OF THE LEAGUE.

The expenses of the League were estimated at 30,639,664 Swiss francs for 1935 (approximately £2,000,000), towards which Great Britain contributes 3,180,938 Swiss francs (£190,000). The expenses are allocated to the members in units of 30,295 Swiss francs, payable as under in 1935:—

U.K. (105), France (79), U.S.S.R. (79), Germany (63.4), Italy (60), Japan (13.97), India (56), China (46), Spain (40), Canada (35), Poland (32), Argentina (29), Czechoslovakia (29), Australia (27), Netherlands (23), Rumania (22), Yugoslavia (20), Belgium (18), Sweden (18), Switzerland (17), South Africa (15), Chile (14), Mexico (14), Denmark (12), I.F.S. (10), New Zealand (10), Turkey (10), other nations contributing less than ten units each. The total in 1935 was 1033 units. In a full year (before withdrawal from the League) the share of Germany was 79 units, and that of Japan 60 units.

### LEAGUE OF NATIONS UNION.

LEAGUE OF NATIONS UNION, 15, Grosvenor Crescent, S.W. 1.—*President*, Viscount Cecil of Chelwood, K.C.; *Chairman of Executive Committee*, Prof. Gilbert Murray, LL.D.; *General Sec.*, J. C. Maxwell Garnett, C.B.E., Sc.D.

\* Any information about the League and its work can be obtained by application at this address.

*The House of Windsor* is in direct descent from (*inter alios*) Egbert, King of Wessex, Alfred the Great and William the Conqueror; also from the Emperor Charlemagne (*b.* 742, *d.* 814), Rodrigo the Cid (*b.* 1030, *d.* 1099), the Emperor Barbarossa (*b.* 1123, *d.* 1190) and St. Louis, King of France (*b.* 1215, *d.* 1270).

**WELSH SOVEREIGNS AND PRINCES.**

WALES was ruled by Sovereign Princes from the "earliest times" until the death of Llewellyn in 1282. The first English Prince of Wales was the son of Edward I., and was born in Caernarvon town on April 25, 1284. According to a discredited legend, he was presented to the Welsh chieftains as their Prince, in fulfillment of a promise that they should have a Prince who "could not speak a word of English" and should be native born. This son, who afterwards became Edward II., was created "Prince of Wales and Earl of Chester" at the famous Lincoln Parliament on February 7, 1301. The Heir Apparent to the Throne, if the eldest (or eldest surviving) son of the Sovereign bears the title Prince of Wales by individual investment and not by birth. The present King was installed as Prince of Wales in Caernarvon Castle on July 13, 1911.

GEORGE III. was the eldest son of Frederick, Prince of Wales (eldest son of George II.), and of Princess Augusta (youngest daughter of Frederick II., Duke of Saxe-Gotha Altenburg). His Majesty was born at Norfolk House, St. James's Square, June 4, 1738; succeeded to the Throne Oct. 25, 1760; married Princess Charlotte (daughter of Charles, Duke of Mecklenburg-Strelitz); and was crowned with her on Sept. 22, 1761. The government was carried on, from Feb. 5, 1811, until the death of King George III., by his eldest son George, under the title of *Prince Regent*. King George III. died at Windsor, Jan. 29, 1820, his issue being:—

1. George Augustus Frederick, *Prince of Wales*, born Aug. 12, 1762, married his cousin Caroline, daughter of Charles, Duke of Brunswick-Wolfenbüttel, by whom he had a daughter, the Princess Charlotte of Wales (born Jan. 7, 1796; died in child-birth, Nov. 6, 1817, having married, May 2, 1816, Prince Leopold of Saxe-Coburg, afterwards King of the Belgians); succeeded to the throne as George IV., Jan. 29, 1820; died June 26, 1830.

2. Frederick, *Duke of York and Albany and Earl of Ulster*, born Aug. 16, 1763, married Frederica, daughter of Frederick William II. of Prussia. The Duke, who was for many years Commander-in-Chief of the Army, died, without issue, Jan. 5, 1827.

3. William, *Duke of Clarence and St. Andrew's and Earl of Munster*, born Aug. 21, 1765, married Adelaide, daughter of George, Duke of Saxe-Meiningen, by whom he had two daughters—Charlotte Augusta Louisa (born and died Mar. 27, 1819), and Elizabeth Georgina Adelaide (born Dec. 20, 1820, died Mar. 4, 1821); succeeded to the throne as William IV., June 26, 1830; died June 20, 1837.

4. Charlotte, *Princess Royal*, born Sept. 29, 1766; married May 18, 1797, Frederick, Prince (afterwards King) of Württemberg; died, without issue, Oct. 5, 1823.

5. Edward, *Duke of Kent and Strathearn and Earl of Dublin*, born Nov. 2, 1767; married Victoria, daughter of Francis, Duke of Saxe-Coburg, sister of Leopold I., King of the Belgians, and widow of Charles, Prince of Leiningen, by whom he had an only child, Her Majesty QUEEN VICTORIA. The Duke died Jan. 23, 1820.

6. Augusta, born Nov. 8, 1768; died, unmarried, Sept. 22, 1840.

7. Elizabeth, born May 22, 1770; married April 7, 1818, Frederick, Landgrave of Hesse-Homburg; died, without issue, Jan. 10, 1840.

8. Ernest, *Duke of Cumberland and Earl of Armagh*, born June 5, 1771; married May 29, 1815, Frederica, third daughter of Frederick V., Grand Duke of Mecklenburg-Strelitz, widow, 1st, of Prince Frederick of Prussia, and, 2nd, of Frederick, Prince of Salm-Braunfels; became King of Hanover on death of William IV.; died Nov. 18, 1851, leaving issue, George, King of Hanover (1851-1866), born May 27, 1819; married Feb. 18, 1843, Alexandrina Mary, eldest daughter of the Duke of Saxe-Altenburg, by whom he had issue one son and two daughters; died June 12, 1878.

9. Augustus, *Duke of Sussex*, born Jan. 27, 1773; married Lady Augusta Murray, daughter of John, Earl of Dunmore, but this being contrary to the provisions of the Royal Marriage Act (22 Geo. III. c. 11), the union was pronounced invalid; died April 21, 1843.

10. Adolphus, *Duke of Cambridge, Earl of Tipperary and Baron Culloden*, born Feb. 24,

1774; married Augusta, daughter of Frederick, Landgrave of Hesse. The Duke, who acted as Viceroy of Hanover until the death of William IV., died at Kew, July 8, 1850, leaving issue:—

(1) H.R.H. Prince George, *Duke of Cambridge*, born Mar. 26, 1819, Field-Marshal, Commander-in-Chief of the British Army 1856-1895; died, without succession, Mar. 17, 1904.

(2) H.R.H. Princess Augusta, born July 19, 1822; married the Grand Duke of Mecklenburg-Strelitz; died Dec. 5, 1916.

(3) H.H.H. Princess Marie Adelaide, born Nov. 27, 1833; married H.H. Francis, Duke of Teck; died Oct. 27, 1897, her issue being:—

(a) H.S.H. Princess Victoria Mary Augusta Louisa Olga Pauline Claudine Agnes (QUEEN MARY), born at Kensington Palace, May 26, 1867; married July 6, 1893, H.R.H. Prince George of Wales, *Duke of York*, who succeeded to the Throne May 6, 1910, as KING GEORGE V.; crowned with His Majesty at Westminster Abbey, June 22, 1911.

(b) Adolphus Charles Alexander Ladislaus Cambridge, *Marquess of Cambridge*, G.C.B., G.C.V.O., C.M.G., born Aug. 13, 1868; married Lady Margaret Grosvenor, daughter of the Duke of Westminster; died Oct. 24, 1927, leaving issue: (i) George, 2nd *Marquess of Cambridge*, G.C.V.O., born Oct. 11, 1895; married (1923) Dorothy, daughter of Hon. Osmond Hastings, and has issue, a daughter, born 1924; (ii) Lady Victoria Constance Mary Cambridge, born 1897; married (1923) the Duke of Beaufort; (iii) Lady Helena Frances Augusta Cambridge, born 1899; married (1919) the late Lt.-Col. J. E. Gibbs, M.C.; (iv) Lord Frederick Charles Edward Cambridge, born 1907.

(c) H.S.H. Prince Francis, born Jan. 7, 1870; died Oct. 22, 1910.

(d) Alexander Augustus Frederick George, Maj.-Gen. the *Earl of Athlone*, K.G., P.C., G.C.B., G.M.G., G.C.V.O., D.S.O., Personal A.D.C. to the King, Grand Master of the Order of St. Michael and St. George, Chancellor of London University, born April 14, 1874; married H.R.H. Princess Alice of Albany (see "Queen Victoria's Family"), their issue being (i) Lady Mary Helen Emma, born 1905; married (1931) Maj. Henry Abel-Smith; (ii) Viscount Trennath, born 1907, died April 15, 1928.

11. Mary, born April 25, 1776; married July 22, 1816, her cousin William Frederick, Duke of Gloucester; died without issue April 30, 1857.

12. Sophia, born Nov. 3, 1777; died, unmarried, May 27, 1848.

13. Octavius, born Feb. 25, 1779; died May 3, 1783.

14. Alfred, born Sept. 22, 1780; died August 26, 1782.

15. Amelia, born Aug. 7, 1783; died, unmarried, Nov. 2, 1810.

QUEEN VICTORIA, the only child of H.R.H. the Duke of Kent, son of George III., was born May 24, 1819; succeeded to the Throne June 20, 1837; crowned June 28, 1838; married Feb. 10, 1840, Albert, Duke of Saxony, Prince of Coburg and Gotha, PRINCE CONSORT (born Aug. 26, 1819, died Dec. 14, 1861); died Jan. 22, 1901. Her Majesty had issue:—

1. H.R.H. Princess Victoria (*Princess Royal*), born Nov. 21, 1840, married Jan. 25, 1858, Frederic, Crown Prince of Prussia, afterwards German Emperor; died Aug. 5, 1901, leaving issue:—

(i) H.I.M. William II., *German Emperor* 1888–1918, born Jan. 27, 1859, married Princess Augusta Victoria of Schleswig-Holstein-Sonderburg-Augustenburg (born 1859, died 1921), and secondly Princess Hermine of Reuss. The German Emperor's family:—

1935, Lady Alice Montagu Douglas Scott, daughter of the 7th Duke of Buccleuch (H.R.H. the Duchess of Gloucester, born Dec. 25, 1901).

### The Duke of Kent.

**H.R.H. THE DUKE OF KENT (GEORGE Edward Alexander Edmund),** Duke of Kent, Earl of St. Andrews and Baron Downpatrick, K.G., K.T., G.C.M.G., G.O.V.O., Personal A.D.C. to the King, Col.-in-Ch. The Queen's Own W. Kent R., Commander, R.N., Personal Naval A.D.C. to the King, born Dec. 20, 1902, married Nov. 29, 1934, H.R.H. Princess Marina of Greece and Denmark (born Nov. 30, O.S., 1906), and has issue:—

H.R.H. Prince Edward George Nicolas Paul Patrick, born Oct. 9, 1935.

## MOTHER OF HIS MAJESTY.

**H.M. QUEEN MARY (H.S.H. Princess VICTORIA MARY Augusta Louise Olga Pauline Claudine Agnes ("Princess May") of TECK,** daughter of H.H. the late FRANCIS, Prince and Duke of TECK, G.C.B., G.O.V.O., by H.R.H. the late Princess MARY ADELAIDE Wilhelmina Elizabeth of CAMBRIDGE, Lady of the Garter, and of the Orders of the Star of India, of Victoria and Albert and the Crown of India, a Dame Grand Cross of the Royal Victorian Order and of the Order of the British Empire, Dame Grand Cross of the Order of St. John of Jerusalem, Col.-in-Chief 13th/18th Hussars and Worcester and Oxford Yeom. Bgde., R.F.A. (T.), Comdt.-in-Chief Queen Mary's Army Auxiliary Corps, President of British Red Cross Soc., D.O.L., LL.D., Mus.D.; born May 26, 1867; married at St. James's Palace, July 6, 1893, H.R.H. Prince GEORGE Frederick Ernest Albert of WINDSOR, created Duke of York, Earl of Inverness and Baron Killarney, U.K. 1892; Prince of Wales and Earl of Chester November 9, 1901, who succeeded as KING GEORGE V. 1910, and died Jan. 20, 1936.

## ANNUITIES TO THE ROYAL FAMILY.

The annuities payable to His Majesty and to the members of the Royal Family are known as the *Civil List*, which is granted by Parliament upon the recommendation of a Select Committee. The Civil List of King Edward VII. and of King George V. amounted to £470,000, in addition to which annuities to other members of the Royal Family accounted for an additional annual sum. The Select Committee reported on April 28, 1936, and made recommendations, which were adopted by the House of Commons.

His Majesty's Privy Purse ..... £110,000  
Salaries of Household and retired  
Allowances ..... 134,000  
Expenses of Household ..... 152,800  
Royal Bounty ..... 13,200

\* £410,000

\* From this sum there will remain undrawn:—  
While His Majesty is unmarried ..... £40,000  
While the Revenues of the Duchy of Cornwall, which are vested in His Majesty, remain at present level of £104,000 ..... 79,000

£119,000

Queen Mary ..... £70,000  
Duke of York ..... £23,800  
The Princess Royal ..... 5,700  
Duke of Gloucester ..... 23,800  
Duke of Kent ..... 23,800  
Princess Louise (Duchess of Argyll) ..... 5,700  
Duke of Connaught ..... 23,800  
Princess Beatrice ..... 5,700  
Queen of Norway ..... 5,700

† His Majesty having allotted also an annuity of £25,000 from the revenues of the Duchy of Cornwall.

**The Coronation Ceremony.**

MAY 12, 1937.

FROM the time of Henry the Eighth it has been a recognized constitutional principle that immediately upon the death of a monarch his heir becomes his already constituted successor. The solemn and elaborate ceremony of Coronation is the formal public ratification of an event which is already of binding force. The date of its occurrence is unfixed and the Coronation of King Edward VIII. has been proclaimed to take place on May 12, 1937, nearly sixteen months after the accession. The Coronation of King George V. took place on June 22, 1911, some thirteen months after the accession; in the case of Queen Anne, on the contrary, the interval had been for less than eight weeks. Before the coronation of His Majesty Westminster Abbey will probably be closed to the public for a considerable period, during the construction of an annexe for a vestibule outside the entrance door, and for the process of a gorgeous decoration within. The carpets and hanging were, on the last occasion, of dark blue and silver-grey, and the chairs and boxes were equally handsome. Entrance was made by the annexe and the western door and thus along the Nave; and near the centre of the edifice, where the Transepts divide that portion from the Choir, a raised square platform termed the Theatre was erected. In front of this, facing up the Choir and towards the Altar, will be placed the Throne, elevated by five steps. Near by the Altar, placed sideways on the South side of the area, stands the Recognition Chair. Before the Throne is the Reading Desk, and then the Coronation or King Edward's Chair. The Recognition Chair is on the South side, and the Prelates on the North, whilst on each side of the Altar is a door opening into King Edward's Chapel where stands St. Edward's Altar. On the last occasion the South Transept was assigned to Peers, with the Princes of the Blood Royal in chairs before them, and the North Transept to Peeresses, similarly preceded by the Princesses: all in their robes, but with their coronets thus far borne in their hands—by pages, however, in the case of those Peers who had to take part in the ceremonies. Nearly all round the Abbey there were raised galleries for the accommodation of spectators, some five thousand in all; the Members of the House of Commons in galleries which stood high above the Peers in the South Transept. Visitors had to appear either in full court dress or in uniform, Members of Parliament, however, having the further option of morning dress; ladies were restricted to court dress without trains.

**THE ROYAL PROCESSIONS.**

There were, on the last occasion, three distinct processions to the Abbey (as there were upon entering it), those respectively of the Royal Representatives and guests, the Royal Family, and the King and Queen. Of these the first was made up of fourteen dress carriages, preceded and followed, as were the other two, by escorts of the Household Cavalry: trumpeters heralded the first only. The procession of the Royal Family contained five

carriages. In the King's own procession there were first four dress carriages, then a long train of Officers on horseback including Orderly Officers, Aides-de-Camp-General and Staff Officers, Marshalsmen, Yeomen of the Guard, Equerries Extra and in Ordinary, with Escorts of Colonial and Indian Cavalry besides the Household Cavalry; then the gilded state coach conveying their Majesties, attended by the Duke of Connaught and other Princes on horseback, and high officials followed by Equerries and Grooms in the rear, a further Escort of Household Cavalry closing up the whole.

The Great Officers of State and other participants in the ceremonies arrived at an early hour in time for preparations, and the Regalia were allotted in the Vestibule as follows:—

**THE KING'S REGALIA.**

St. Edward's Staff, to the Duke of Roxburghe.

The Spurs, to the Earl of Loudoun and Lord Grey de Ruthyn.

The Sceptre with the Cross, to the Duke of Argyll.

The Pointed Sword of Temporal Justice or Third Sword, to Field-Marshal Viscount (afterwards Earl) Kitchener of Khartoum.

The Pointed Sword of Spiritual Justice or Second Sword, to Field-Marshal Earl Roberts.

Curtana, or Sword of Mercy, to the Duke of Beaufort.

The Sword of State, to Earl Beauchamp.

The Sceptre with the Dove, to the Duke of Richmond and Gordon.

The Orb, to the Duke of Somerset.

St. Edward's Crown, to the Duke of Northumberland, as Lord High Steward.

The Patina, to the Bishop of London.

The Chalice, to the Bishop of Winchester.

The Bible, to the Bishop of Ripon.

The Royal personages of the two preliminary processions having taken their seats, that of His Majesty now entered the Abbey. First came the Chaplains in Ordinary, the Prebendaries of the Abbey (in dark crimson copes), and the Dean. Then the Heraldic and Knightly group—the Pursuivants in mediæval array, and the Officers of the Orders in mantles of purple or blue velvet; Heralds in cloth of gold, the standards of the Dominions, the blue and gold standard of Ireland, the orange and red one of Scotland, the red banner of England, and the flag of the Union (borne by the Duke of Wellington). Next came the Keeper of the Crown Jewels, the four Knights of the Garter appointed to hold the golden canopy at the Anointing (Lords Cadogan, Rosebery, Minto, and Crewe), in mantles of dark red and white. Then the Lord Chamberlain and the Lord Steward of the Household, the Lord President of the Council, Chancellor of Ireland, the Prime Minister, the Archbishop of York, the Lord Chancellor (England), and the Archbishop of Canterbury. Four Pursuivants came next, ushering in the Queen's Regalia. Her Majesty, who was attired in purple and wearing a golden circlet on her head, walked up to and stood by her seat in the chair by the side of the King's Recognition Chair, with two Bishops and five

Gentlemen-at-Arms (in scarlet tunics and with white plumes), standing on each side of her, her train borne by the Mistress of the Robes, supported and followed by Gentlemen of the Suite and her Ladies of the Bedchamber, Women of the same, and Maids of Honour. The King's own attendants came next, introduced by Richmond, Windsor, and York Heralds, with the bearers of the Regalia. Then the Kings of Arms in gold and emblazoned tabards; the Lord Mayor, accompanied by the City Mace; and Black Rod; the Earl Carrington (afterwards Marquess of Lincolnshire), the Lord Great Chamberlain; the Duke of Abercorn and the Earl of Erroll as High Constables of Ireland and Scotland; the Earls of Crawford and Shrewsbury as Scottish and Irish High Stewards; the Earl Marshal; Earl Beauchamp bearing the Sword of State; the Lord High Constable; and the Duke of Northumberland, as Lord High Steward, bearing upon its cushion St. Edward's Crown, whilst the Duke of Somerset on his right carried the Orb, and the Duke of Richmond on his left the Sceptre with the Dove. These were followed by the Ecclesiastical group, conveying the Bible, Chalice, and Patina. The boys of Westminster School enjoy the special privilege of witnessing coronations and shouting "Vivat" as the King enters.

#### THE PRESENTATION.

King George V was attired at this stage in his crimson Royal Imperial Mantle, with his Cap of Maintenance of the same hue and his Collar of the Garter. The Nobles who were bearers of his train were in red and white, whilst the Bishops of Durham and Bath and Wells with ten Gentlemen-at-Arms were on each side of him; the other three Bishops, bearers of the Bible, Chalice, and Patina (plate for the bread), stood near the Pulpit, the Nobles with the Four Swords on his right, and the Lord Chamberlain of the Household and the Groom of the Robes behind him. On their entrance the Anthem "I was glad when they said unto me" was sung, and at its conclusion the Archbishop of Canterbury (Dr. Davidson), attended by the Lord High Chancellor, the Lord Great Chamberlain, the Lord High Constable, and the Earl Marshal, proceeded to make the Recognition. The form of words was this: "Sirs, I here present unto you King George, the undoubted King of this realm: wherefore, all you who are come this day to do your homage and service, are you willing to do the same?" The "people" then replied with repeated acclamations, "God save King George the Fifth!" and the trumpets sounded. This form was gone through four times over, addressed to each point of the compass. The King, who had been standing, now resumed his seat, whereupon the Archbishop proceeded to the Altar and the Litany was sung by the Bishops of Bath and Wells and of Oxford. The Archbishop of Canterbury then read the Prayers of the opening portion of the Communion Service, Sir Frederick Bridge's adaptation of Purcell's "Introit" was here brought in, and then the Bishop of Winchester read the Epistle and the Bishop of London the Gospel. Next followed the Sermon, preached by the Archbishop of York, from the text "I am among you as he that serveth."

#### THE CORONATION OATH.

The Coronation Oath was now taken, the King having, on Feb. 6, 1911, made and signed the Declaration against Popery in the presence of both Houses of Parliament. The following questions were first administered by the Archbishop of Canterbury:—

ARCHB.: Will you solemnly promise and swear to govern the people of this United Kingdom of Great Britain and Ireland, and the Dominions thereto belonging, according to the statutes in Parliament agreed on, and the respective laws and customs of the same?

KING: I solemnly promise so to do.

ARCHB.: Will you by your power cause law and justice, in mercy, to be executed in all your judgments?

KING: I will.

ARCHB.: Will you to the utmost of your power maintain the laws of God, the true profession of the Gospel, and the Protestant Reformed Religion established by law? And will you maintain and preserve inviolably the settlement of the Church of England, and the doctrine, worship, discipline, and government thereof, as by law established in England? And will you preserve unto the bishops and clergy of England, and to the Church therein committed to their charge, all such rights and privileges as by law do or shall appertain to them, or any of them?

KING: All this I promise to do.

Following upon these words His Majesty proceeded to the Altar attended by his Supporters and the Lord Great Chamberlain, the Sword of State alone being borne before him. At the Altar steps he removed his Cap of State, and, kneeling, pronounced the words, "The things which I have heretofore promised I will perform and keep—so help me God." He then kissed the book and set his sign manual to a transcript of the Oath. The King now returned to his Chair, and while their Majesties knelt, the Hymn was sung by the Choir, the Archbishop reading the first line: "Veni Creator Spiritus."

#### THE ANOINTING.

The ceremony of Anointing follows, the Archbishop of Canterbury first reading the Prayer commencing, "O Lord, Holy Father, who by anointing with oil," &c., and then the Choir singing the Anthem "Zadok the Priest." The King was then divested, by the Lord Great Chamberlain, of his crimson Robe, took off his Cap, and removed to the Coronation Chair, where he was surrounded by the four Knights of the Garter, who held the pall of cloth of gold over him so as to conceal him from the view of the spectators; whereupon the Dean of Westminster poured some of the consecrated oil from the Ampulla into the Anointing Spoon and handed it to the Archbishop of Canterbury, who then anointed the King, in the form of a cross, upon the head, the breast, and the palms of both hands, the Blessing after Anointing following, during which the King knelt at his faldstool, and then returned to the Chair, when the Dean invested him in the Colobium Sindonis and the Supertunica of cloth of gold. The Great Spurs were now brought from the Altar, when the Lord Great Chamberlain knelt before the King and touched his heels with them. The Sword of State was next delivered to the Lord Chamberlain of the

Household, and by him to the Keeper of the Crown Jewels, who in its place gave to the Peer who had borne it another sword, in a scabbard of purple velvet, which sword the Peer passed to the Archbishop, who, after another prayer, placed it in the King's right hand. The Lord Great Chamberlain then girded it round him, and the King himself ungirded it, when it was placed upon the Altar and then redeemed for a hundred shillings by the Peer, who now drew it from the scabbard (which he passed to the Groom of the Robes) and carried it naked for the remainder of the ceremonies. The King was now invested by the Dean in the Armilla or Stole and the Imperial Mantle or Dalmatic Robe, handed to him by the Master of the Robes. The Orb was placed temporarily in the King's right hand, the Ruby Ring upon the fourth finger of the same, and a glove handed to him by the Lord of the Manor of Workop (the Duke of Newcastle, who a few years back had purchased that estate from the Duke of Norfolk), an Exhortation or Prayer accompanying every stage.

### THE CORONATION.

Now succeeds the Coronation itself. The Sceptre with the Cross is placed in the King's right hand and that with the Dove in his left; and then the Archbishop of Canterbury stands before the Altar with St. Edward's Crown upon it, takes it up and consecrates it, lays it down again, and, attended by other Prelates, proceeds to the side of the King, when the Dean brings to him the Crown, which he now places upon the King's head, whereupon the "people" shout "God save the King," and the Peers put on their coronets, the Bishops their caps, and the Kings of Arms their crowns, the trumpets sound, the drums are beaten, and the guns of the Tower and the Park are, on signal, fired off. An exhortation is now spoken, and the Choir sing "Be strong and play the Man." The Bible is next handed to the King, and then the Archbishop of Canterbury pronounces the Benedictions, which the Bishops and Peers accompany with frequent "Amens." The process of Enthronisation succeeds, when the King is lifted into his Throne by the Prelates and Peers around him.

### THE HOMAGE.

Lastly comes the Homage, which is pronounced kneeling by a leading representative of each of the various ranks in succession—by the Archbishop of Canterbury for the Lords Spiritual, by the Prince of Wales (in the present instance, by the Duke of York) for the Royal Family, and by the senior Peer of each degree—each touching the Crown and kissing the King on his left cheek. The words as uttered by the Peers were in this form: "I, Henry, Duke of Norfolk, do become your liege man of life and limb and earthly worship; and faith and truth I will bear unto you to live and die against all manner of folk—so help me God." For the Princess the form is the same, but for the Prelates there was substituted for the latter clause, "And I will do, and truly acknowledge, the service of lands which I claim to hold of you as in right of the Church."

The crowning of Queen Mary had then to follow. When the Homage and Anthem were completed, Her Majesty, who had been sitting

in the State Chair by the side of the Recognition Chair, now removed to the Altar, where the Archbishop of Canterbury repeated the Prayer of Consecration. She then knelt at her faldstool, where four Duchesses (Portland, Sutherland, Hamilton, and Montrose) held over her a pall of cloth of gold, whilst the Archbishop of Canterbury anointed her head, put the Queen's Ring on the fourth finger of her right hand, and then the Crown upon her head. The Princesses and Peeresses hereupon put on their coronets, and the Archbishop of Canterbury put the Sceptre with the Cross in her right hand and the Ivory Rod in her left, upon which she rose and was conducted to her own Throne, bowing reverently to the King as she passed him. They both now made the customary Offerings or Oblations of a pall of cloth of gold, the King accompanying his with an ingot of gold of a pound weight and the Queen hers with one of a "mark weight." The remaining and principal portion of the Communion Service then followed, the Archbishops of Canterbury and York and the Dean of Westminster first communicating, and then the Archbishop of Canterbury administered the bread and the Dean the wine. After this the Choir sang "Glory be to God," and the Archbishop of Canterbury pronounced the Blessing.

Their Majesties then passed into King Edward's Chapel, the King by the South door and the Queen by the North. Here the King was disrobed, by the Lord Great Chamberlain, of his Royal Imperial Mantle and invested with his Royal Robe of Purple Velvet, together with his Crown of State (his own Crown, not that of St. Edward). They then returned through the West door of the Abbey wearing their Crowns and bearing their Sceptres: the Four Swords were borne before them, and the Princes and Princesses followed wearing their coronets. The three processions, in reverse order, then made their return journey, taking the route of Parliament Street, Whitehall, Cockspur Street, Pall Mall, St. James's Street, Piccadilly, and Constitution Hill.

### THE CORONATION COMMISSION.

A Coronation Commission, of which H.R.H. the Duke of York is Chairman (Vice-Chairman, The Duke of Norfolk) has been appointed to consider the preparations necessary for the Coronation of His present Majesty on May 12, 1937.

The Commission comprises the Executive Committee of the Coronation Committee of the Privy Council, set up on July 7, 1936, together with representatives of Canada, Australia, New Zealand and South Africa, and is directed to carry out any recommendations made after they shall have received the Approval of the King.

### CORONATION DATES, 1714-1911.

Sovereign.	Accession.	Coronation.
George I. ....	Aug. 1, 1714	Oct. 20, 1714
George II. ....	June 12, 1727	Oct. 11, 1727
George III. ....	Oct. 25, 1760	Sept. 22, 1761
George IV. ....	Jan. 29, 1820	July 19, 1821
William IV. ....	June 26, 1830	Sept. 8, 1831
Victoria. ....	June 20, 1837	June 28, 1838
Edward VII. ....	Jan. 22, 1901	Aug. 9, 1902
George V. ....	May 6, 1911	June 22, 1911

# The King's Household.

*The Lord Chamberlain.* The Earl of Cromer, P.C., G.C.B., G.C.I.E., G.C.V.O.

*The Lord Steward.* The Duke of Sutherland, K.T.

## Peeresses in Their Own Right.

PEERESSES IN OWN RIGHT. Peerages are occasionally granted immediately to ladies of distinction or the widows of distinguished men; but frequently the instances falling under this heading are the result of regular inheritance in lines which are open to females in default of males. Thus it results that some of the Peeresses now upon the list have male heirs who will succeed them in the ensuing generation and take their seats by strict right in the House of Lords; while, on the other hand, several peerages now occupied by males will fall to the other sex, and thus for a time take leave of that House. A resolution to admit Peeresses in their Own Right to the House of Lords was defeated in that house in 1830. A Peeress in her own Right retains her title after marriage, and if her husband's rank is the superior she is designated by the two titles jointly, the inferior one last: her hereditary claim still holds good in spite of any marriage whether higher or lower. No rank held by a woman can confer any title or even precedence upon her husband; but the rank of a Peeress in her own right is inherited by her eldest son (or perhaps daughter), to whomsoever she may have been married.

### DUCHESS IN HER OWN RIGHT.

<i>Created.</i>	<i>Title, Name, &amp;c.</i>	<i>Eldest Son or Heir.</i>
1900	Pife, Alexandra, Duchess (H.R.H. Princess Arthur of Connaught), <i>b.</i> 1891, <i>s.</i> 1912, <i>m.</i> .....	Earl of Macduff, <i>b.</i> 1914

# Courtesy Titles borne by Eldest Sons (in actual use in 1937).

Holders of Courtesy Titles are addressed in the manner shown for holders of substantive titles.

From this list it will be seen that the "Marquess of Blandford" is the heir to the Dukedom of Marlborough; that the "Earl of Altamont" is the eldest son of the Marquess of Sligo, while "Viscount Acheson" is heir to the Earldom of Gosford, and "Lord Aberdour" to the Earldom of Morton; \* the titles borne by second heirs are also given, e.g. "Earl of Burlington," eldest son of the "Marquess of Hartington," heir to the Dukedom of Devonshire; "Viscount Bayham," eldest son of the "Earl of Brecknock," heir to the Camden Marquessate; and "Viscount Savernake," eldest son of the "Earl of Cardigan," heir to the Marquessate of Ailesbury.

NOTE.—In titles marked ° the "of" is not used.

.. In addition to the above Titles of Courtesy the eldest son of Scottish Viscounts and Barons is usually styled "The Master of ——" e.g. "The Master of Falkland," eldest son of Viscount Falkland; "The Master of Carnegie," eldest son of Lord Carnegie and grandson of the Earl of Southesk.

Contractions used in pages 231-250.

Contractions.—S. or I. appended to the date of creation denotes a Scottish or Irish title; the further addition of a \* implies that the Peer in question holds also an Imperial title, which is specified (after the name) by its more definite description as Engl., Brit., or U.K. When both titles are alike, as in the case of Argyll, this star is appended to the conjoined date below, and it then denotes that such date is that of the Imperial creation. A † appended to S. or I. implies that the Peer is an elected Representative to the House of Lords. For the mark ° see heading to Marquesses; b. signifies born; s., succeeded; m., married; w., widower or widow; M., minor.

# His Majesty's Most Honourable Privy Council.

Note.—I, prefixed to date, signifies Membership of the Privy Council of Ireland, to which no appointments have been made since 1922.

and 57 Ireland (marked I).

# Baronets.

(Exclusive of such as are Peers.)

Scotland or Nova  
Scotia (88, marked S).

NOTE. Clause II. of the Royal Warrant of February 8, 1810, ordains as follows:—"That no person whose name is not entered upon the Official Roll shall be received as a Baronet, or shall be addressed or mentioned by that title in any Civil, or Military Commission, Letters Patent or other official document." Baronets are addressed as "Sir" (with Christian name and in writing as "Sir Robert A.—, Bt.") Baronets' wives are addressed (formally) as "Your Ladyship" or "Lady A.—," without any Christian name unless a daughter of a Duke, Marquess or Earl, in which case "The Lady Mary A.—"; if daughter of a Viscount or Baron "The Hon. Lady A.—."

*Registrar of Baronetage, Sir H. R. Boyd, K.C.V.O., C.B.E., Home Office, S.W. 1.*  
*Asst. do., P.T. Sherry, M.H.F.*

### \* Precedency in Great Britain.

The Sovereign.	Secretaries of State, if of the degree of a Baron.	Eldest Sons of Knights in the same order as their Fathers.
The Duke of York.	Barons, in same order as Dukes.	<i>M.V.O., G.B.E., M.H.F.</i>
Sovereign's Younger Brothers.	Treasurer of H.M.'s Household.	Younger Sons of the younger Sons of Peers.
Sovereign's Uncles.	Comptroller of H.M.'s Household.	Baronets' younger Sons.
Sovereign's Nephews.	Vice Chamberlain of Household.	Younger Sons of Knights in the same order as their Fathers.
Ambassadors.	Secretaries of State under the degree of Baron.	Naval, Military, and other Esquires by Office.
Archbishop of Canterbury.	High Commissioners.	Women take the same rank as their husbands or as their eldest brothers; but the daughter of a Peer marrying a Commoner retains her title as Lady or Honourable. Daughters of Peers rank next immediately after the wives of their elder brothers, and before their younger brothers' wives.
Lord High Chancellor.	Viscounts' eldest Sons.	Daughters of Peers marrying Peers of lower degree take the same order of precedence as that of their husbands; thus the daughter of a Duke marrying a Baron descends to the rank of Baroness only, while her sisters married to commoners retain their rank and take precedence of the Baronesses.
Archbishop of York.	Earls' younger Sons.	Merely official rank on the husband's part does not give any similar precedence to the wife.
Prime Minister.	Barons' eldest Sons.	For Dames Grand Cross and Dames Commander, see p. 278.
Lord President of the Council.	Knights of the Garter if Commoners.	LOCAL PRECEDENCY.—No written code of county or city order of precedence has been promulgated, but naturally in the county the Lord Lieutenant stands first, and secondly the Sheriff. In London and other Corporations, the Mayor stands first, after him the Aldermen, Sheriffs, Chief Officers, and Livery. At Oxford and Cambridge the High Sheriff takes precedence of the Vice-Chancellor.
Speaker of the House of Commons.	Privy Counsellors if of no higher rank.	
Lord Privy Seal.	Chancellor of the Exchequer.	
Five following State Officers if Dukes:	Chancellor of the Duchy of Lancaster.	
(1) Lord Great Chamberlain (on duty).	Lord Chief Justice of England.	
(2) Earl Marshal.	Master of the Rolls.	
(3) Lord Steward.	President of the Probate Court.	
(4) Lord Chamberlain.	The Lords Justices of Appeal.	
(5) The Master of the Horse.	Judges of the High Court.	
Dukes, according to their Patents of Creation:	Viscounts' younger Sons.	
1. Of England; 2. Of Scotland; 3. Of Great Britain; 4. Of Ireland;	Barons' younger Sons.	
5. Those created since the Union	Sons of Life Peers.	
Ministers and Envoys.	Baronets of either Kingdom, according to date of Patents.	
Eldest sons of Dukes of Blood Royal.	Knights of Thistle and St. Patrick if Commoners.	
Five above State Officers if Marquesses.	Knights Grand Cross of the Bath.	
Marquesses, in same order as Dukes.	<i>G.C.S.I.; G.C.M.G.; G.C.I.E.; G.C.V.O.; G.B.E.</i>	
Dukes' eldest Sons.	Knights Commanders of the above Orders.	
Five above State Officers if Earls.	Knights Bachelor.	
Earls, in same order as Dukes.	Judges of County Courts and Judges of the Mayor's and City of London Court.	
Younger Sons of Dukes of Blood Royal.	Serjeants at law.	
Marquesses' eldest Sons.	Masters in Lunacy.	
Dukes' younger Sons.	<i>S.C.B.; C.S.I.; C.M.G.; C.I.E.; C.V.O.; C.B.E.; D.S.O.; M.V.O. (4th); O.B.E.; D.S.O.</i>	
Five above State Officers if Viscounts.	Eldest Sons of younger Sons of Peers.	
Viscounts, in same order as Dukes.	Baronets' eldest Sons.	
Earls' eldest Sons.		
Marquesses' younger Sons.		
Bishops of London, Durham and Winchester.		
All other English Bishops, according to their seniority of consecration.		
Five above State Officers if Barons.		

\* For *Scottish Precedency*, see p. 743. For fuller tables (and for *Irish Precedency*) see Introduction to "WHITAKER'S PEERAGE, BARONETAGE, KNIGHTAGE AND COMPANIONAGE," a companion volume, price 25s. net. A complete list, in *Alphabetical Order* (the only list so published), of all holders of these decorations will be found in "WHITAKER'S PEERAGE."

### THE ORDER OF MERIT (1902)—O.M. Ribbon, Blue and Crimson.

O.M.Civ

This Order confers no precedence. It is designed as a special distinction for eminent men and women without conferring a knighthood upon them. The Order is limited in numbers to 24, with the addition of foreign honorary members. Membership is of two kinds, Military and Civil, the badge of the former having crossed swords, and the latter one, crossed sceptres. Membership is designated by the suffix O.M., which is authorised to follow the first class of the Order of the Bath and to precede the letters designating membership of the inferior classes of the Bath and all classes of the remaining Orders of Knighthood.

#### MILITARY.

Field Marshal Sir Philip W. Chetwode, Bt., G.C.B., G.C.S.I., K.C.M.G., D.S.O.

#### CIVIL.

Kenyon, G.B.E., K.C.B. For services rendered to the Empire, whether at home or abroad, open to both men and women. G.B.E., Knights Grand Cross or Dames Grand Cross; K.B.E., Knights Commanders; D.B.E., Dames Commanders; C.B.E., Commanders; O.B.E., Officers; M.B.E., Members. The Order was divided into Military and Civil divisions in Dec., 1928.

K.B.E.

### THE KNIGHTS BACHELOR.

The Knights Bachelor do not constitute a Royal Order, but comprise the surviving representation of the ancient State Orders of Knighthood. The Register of Knights Bachelor, instituted by James I. in the 17th century, lapsed, and in 1903 a voluntary association under the title of "The Society of Knights" (now "The Imperial Society of Knights Bachelor" by Royal command) was formed with the primary objects of continuing the various registers dating from 1257 and obtaining the uniform registration of every created Knight. In 1926 a design for a badge to be worn by Knights Bachelor was approved and adopted, a miniature reproduction being shown at the head of this paragraph. An annual Knightage is published from information supplied by the authorities, and can be obtained on application. The Officers of the Society are:—Knight Principal, Sir Gerald Wollaston, K.C.V.O.; Vice-Principal, Sir T. Vansittart Bowater, Bt., M.P.; Hon. Registrar, Sir Park Goff, Bt., K.C., M.P.; Clerk, Miss E. Blackwell; Registry and Library, 21 Old Buildings, Lincoln's Inn, W.C. 2.

ORDER OF THE COMPANIONS OF HONOUR (1917)—C.H.

Ribbon, Carmine, with Gold Edges.

This Order consists of one Class only and carries with it no title or precedence, but ranks after the 1st Class of the Order of the British Empire, *i.e.*, Kts. and Dames Grand Cross (Mil. and Civ. Div.). The number of awards is limited and the Order is open to both sexes.

MEN.

## THE DISTINGUISHED SERVICE ORDER (1886)—D.S.O.

*Ribbon, Red, with Blue Edges.*

Bestowed in recognition of special services in action of commissioned officers in the Navy, Army and Royal Air Force. The members are Companions only and rank immediately before the 4th Class of the Royal Victorian Order. A Bar may be awarded for any additional act of service.

## THE IMPERIAL SERVICE ORDER (1902, enlarged 1912)—I.S.O.

*Ribbon, Crimson, with Blue Centre.*

Restricted to members of the administrative or clerical (clerk) branches of the Civil Service, and Assistants of the Sovereign, the Prince of Wales, and Companions (not exclusively made) to a number not exceeding 700, of whom 250 may belong to the Home Services, 200 to the Indian and 250 to the services of Dominions, Colonies and Protectorates.

## OTHER PRINCIPAL DECORATIONS AND MEDALS (in order of Precedence).

*A full list of all Orders, Decorations and Medals and Orders regarding the wearing of them will be found in WHITAKER'S YEARBOOK.*

**The Royal Red Cross (R.R.C.)**—For ladies, founded 1883. is a distinction conferred upon ladies of any rank or nation who may be brought to the Sovereign's notice for acts of mercy in attending to the sick or wounded in time of war.

**The Distinguished Service Cross.**—1914—D.S.C.—In substitution for the Conspicuous Service Cross, 1901, is designed for bestowal on all officers of the R.N. below the rank of Lieutenant-Commander, and on Warrant Officers.

**The Military Cross.**—1915—M.C.—Awarded to Captains, Lieutenants, and 1st class Warrant Officers in the Army and Indian and Colonial Forces.

**The Distinguished Flying Cross.**—1918—D.F.C.—Designed for bestowal upon Officers and Warrant Officers in the Royal Air Force for acts of gallantry when flying in active operations against the enemy.

**The Air Force Cross.**—1918.—A.F.C.—Instituted as preceding, but for acts of courage or devotion to duty when flying, although not in active operations against the enemy.

**The Indian Order of Merit.**—Instituted in 1837, as a reward for personal bravery, to Indian officers and men.

**The Kaisar-i-Hind Medal** (1st Class, gold; 2nd Class, silver).—Was founded in 1900, and is a reward for any person, of either sex, who shall have rendered useful service in or for India.

**The Order of St. John of Jerusalem.**

**The Albert Medal.**—A.M.—Dates from 1866, with extensions in 1867 and 1877. "For Gallantry in Saving Life at Sea" or "on Land."

**The Medal for Distinguished Conduct in the Field.**—1914—D.S.M.—Is designed for chief petty officers, petty officers, men, and boys of all branches of the R.N.; to non-commissioned officers and men of the R.M.A.; and to all other persons holding corresponding positions in His Majesty's Service afloat, for distinguished conduct in war.

**The Conspicuous Gallantry Medal.**—C.G.M.—Is bestowed upon warrant officers and men of the R.N.

**The Distinguished Conduct Medal.**—D.C.M.—Awarded to warrant officers, non-commissioned officers, and men of the Army.

**The Distinguished Flying Medal.**—1918.—D.F.M.—and the **Air Force Medal.**—A.F.M.—for warrant and non-commissioned officers and men for equivalent services as for D.F.C. and A.F.C.

**The Military Medal.**—M.M.—

**The Edward Medal.**—Established by King Edward VII. in 1907, is a recognition of heroic acts performed by miners and quartermen, or of others who have endangered their lives in rescuing those so employed.

**The King's Police Medal.**—Instituted in 1909 as a reward "only for acts of exceptional courage and skill or conspicuous devotion to duty" to officers and men of any recognised Police Force or organised Fire Brigade in the United Kingdom, India, and His Majesty's Dominions beyond the Seas. The number of medals awarded in any one year shall not exceed 120.

**The Medal of the Order of the British Empire, for Gallantry.**—E.G.M.—Awarded in recognition of acts of gallantry. All ranks are eligible for the Medal of the Military Division; there is also a Medal of the Civil Division.

**Life Saving Medal of the Order of St. John.**

*N.B. All the above Medals are worn before War Medals.*

**The Meritorious Service Medal.**—M.S.M.—Since Sept., 1923, granted only to recipients of the Meritorious Service Annulet.

**The Volunteer Officers' Decoration.**—V.D.—Was an honour for rewarding the meritorious services of officers of the Force in question, who must have been in commission, and have served twenty years. It is still awarded to the Royal Naval Volunteer Reserve and to Volunteer Forces Overseas.

**The Territorial Decoration.**—T.D.—Established in 1908, is restricted to commissioned officers at twenty years' good service in the Territorial Army. Similarly a **Territorial Long Service Medal** has been substituted for that formerly awarded to Volunteers.

**The Royal Naval Reserve Decoration.**—R.N.D.—and **Medal.**—Instituted in 1910 to reward good and long service by officers and men of this Service.

**The Imperial Service Medal.**—May be granted only to Members of Civil Services in the U.K., India, the Dominions, Colonies and Protectorates, in other than the administrative and clerical grades.

**The Medal of the Order of the British Empire, for Meritorious Service.**—Is restricted in the Military Division to ranks below that of Warrant Officer, and in the Civil Division to persons not eligible for appointment to the five Classes of the Order.

**The Voluntary Medical Service Medal.**—V.M.S.D. and **M.R.H.S.**—Instituted 1902.

**Service Medal of the Order of St. John.**

**The Badge of the Order of the League of Mercy.**—Both sexes; was established in 1899.

# ORDER OF SUCCESSION TO THE THRONE.

The brothers of the Sovereign are in the order of succession to the throne, and after the youngest brother the sister, in the order of their own seniority. Thus after the Duke of York would come the Princess Elizabeth and the Princess Margaret, daughters of the Duke of York; the Duke of Gloucester; the Duke of Kent and Prince Edward; then the Princess Royal and her children; then, as King

George V. had no brother, his sisters, with the children of the elder in preference to the younger sister; then the second daughter of the late Duke of Saxe-Coburg (his eldest daughter, Queen Marie of Rumania, having formally renounced on her marriage all possibility of claim to the British Throne). After traversing the Saxe-Coburg branch, we treat similarly those of Connaught and Albany.

# 278 Dames Grand Cross and Dames Commanders of the Royal Victorian Order and of the Order of the British Empire.

NOTE.—Dames Grand Cross (G.C.V.O. or G.B.E.) and Dames Commanders (D.C.V.O. or D.B.E.) are addressed in a manner similar to that of Knights Grand Cross or Knights Commanders, e.g. "Miss Florence Smith," after receiving the honour would be addressed as "Dame Florence," and in writing, as "Dame Florence Smith, G. (or D.) C.V.O., or G. (or D.) B.E." Where such award is made to a lady already in enjoyment of a higher title the appropriate letters are appended to her name, e.g. "The Countess of ———, G.C.V.O." Dames Grand Cross rank after wives of Baronets and before wives of Knights Grand Cross. Dames Commanders rank after the wives of Knights Grand Cross and before the wives of Knights Commanders.

## DAMES GRAND CROSS AND DAMES COMMANDERS.

H.M. Queen Mary, G.O., V.A., C.I., G.C.V.O., G.B.E.	Darley, Florence Countess of, D.B.E.	Lyttelton, Hon. Dame Edith, G.B.E.

		Wenlock, Annie, Lady, G.B.E.
		Willingdon, The Countess of, C.I., G.B.E.
		Wingate, Caroline Leslie, Lady, D.B.E.

## Scottish Celtic and Territorial Titles.

Chiefs and landowners in Scotland are entitled to add to their surnames, patronymical or territorial, designations derived from their clan or estate. Form of signature is prescribed by 1672 cap. 47. When so used, these titles are legally regarded as part of the surname, and in address "Esq." is omitted, being inferred. Such titles are admissible in official documents and registers; are also borne by wife, heir and daughters, and when derived from actual land-ownership, or by descent, are assumable without further formality. Otherwise a Lyon Court certificate of recognition is required.

Knights Bachelor.

A LIST OF THOSE WHO HAVE RECEIVED THE HONOUR OF KNIGHTHOOD.  
(Exclusive of such as have afterwards received the higher honour of K.C.B., &c., &c.)

NOTE.—Knights Bachelor are addressed as "Sir —" (Christian name), and in writing as Sir A—B—, (Christian and surname). Wives of Knights Bachelor as Lady — (surname only).

Abdul Hamid, Khan Bahadur Durrani Sir, C.B.E., D.S.O.	Atcherley, Maj.-Gen. Sir Llewellyn W., C.M.G., C.V.O.	Roll, Sir Ernest A. S., C.B.E.	Bower, Sir Percival, M.P.

**THE VICTORIA CROSS. VC.**

The ribbon is *Crimson* for all Services (until 1918 it was *Blue* for Royal Navy).  
FOR CONSPICUOUS BRAVERY. INSTITUTED *January 29th, 1856.*

The VC is worn before all other decorations, on the left breast, and consists of a bronze Maltese Cross,  $1\frac{1}{2}$  inches in diameter, with the Royal Crown surmounted by a lion in the centre, and beneath there is the inscription "For Valour." A special annuity of £10 a year is granted to every recipient below Commissioned Rank, with an additional £5 a year for every bar, such bar being added for additional acts of bravery which would have entitled the recipient to the Victoria Cross if he or she had not already received it. In the event of an annuitant being unable to obtain a livelihood on leaving the Service, the amount of the annuity may be increased to £50. In 1911, the right to receive the Cross was extended to Indian soldiers, and in 1920 a Royal Warrant extended the right to Matrons, Sisters and Nurses, and the Staff of the Nursing Services and other services pertaining to Hospitals and Nursing, and to Civilians of either sex regularly or temporarily under the orders, direction or supervision of the Naval, Military or Air Forces of the Empire.

**THE NEW PARLIAMENT.**—The last Parliament of King George V met for the first time on *Nov. 26*, when the House of Commons unanimously re-elected Capt. E. A. FitzRoy as Speaker, on the motion of Lt.-Col. H. H. Spender-Clay, seconded by Mr. T. Cape. Congratulations were tendered by the Prime Minister, Mr. Attlee, the new Leader of the Opposition, Mr. Lloyd George, the "Father" of the House, and Mr. Maxton. King George's assent to the Commons' choice was given on the following day, and M.P.s were then sworn in, the Peers taking the oath in the other Chamber.

**THE KING'S SPEECH.**—Parliament was opened by Royal Commission on *Dec. 3*, King George and Queen Mary being unable to attend in person owing to the death earlier in the day of Princess Victoria. The King's Speech, read by the Lord Chancellor, referred to the imposition of "certain measures of an economic and financial nature" in regard to Italy, and declared that the Government would continue to exert their influence in favour of peace. The fulfilment of the country's obligations under the Covenant and the adequate safeguarding of the Empire made it "urgently necessary" that the deficiencies in the Defence Forces should be made good, and in due course proposals, limited to the minimum required for those purposes, would be laid before the Commons. Coming to domestic legislation, the Speech mentioned that a measure would be introduced for the unification of coal royalties under national control. An enquiry was to be made into the important matter of reviewing provisions for the safety of miners in the light of modern scientific knowledge. Proposals for making improved arrangements for assistance to the unemployed and for the insurance of agricultural workers against unemployment would be introduced. Other bills would guarantee a loan enabling the railway companies to increase transport facilities, promote civil air communications at home and throughout the Empire, deal with the problem of surplus productive capacity in the cotton-spinning industry, and raise the school-leaving age and improve educational services. The work of slum clearance would be pressed forward and a bill would be brought in to set up an organised service of salaried midwives. In the Upper House, Lord Birkenhead moved and Lord Sandhurst seconded the Address in reply, which was carried. The Address in the Commons was moved by Mr. W. W. Wakefield and seconded by Sir Charles Barrie. The Prime Minister, answering Mr. Attlee's criticism of the Government's foreign policy, said that they were determined to prevent, if possible, the tearing up of treaties. The official Labour amendment was moved by Mr. D. Grenfell on *Dec. 6*. It advocated peace, the reduction of armaments, and public ownership to abolish poverty, and regretted the omission from the Speech of proposals for dealing with unemployment. The amendment was negatived by 382 to 140 on *Dec. 9* and on the following day a Liberal amendment regretting the absence of constructive proposals for absorbing unemployed persons into industry was defeated by 350 to 143, the Address being carried by 281 to 139.

**KING EDWARD'S ACCESSION.**—Summoned for the first time in history by a wireless message, both Houses of Parliament met

within eighteen hours of the death of King George, on *Jan. 21*, to take the oath of allegiance to King Edward. This process was continued on the following day, when many messages of sympathy and tributes to King George received from foreign and Dominion Parliaments were read by the Speaker. "A message from His Majesty the King, signed with His Majesty's hand" was read by the Lord Chancellor and the Speaker on *Jan. 23*. It expressed the assurance that each House mourned the death of his beloved father, who "devoted his life to the service of his people and to the upholding of constitutional government." "He was ever actuated by his profound sense of duty," wrote King Edward. "I am resolved to follow in the way he has set before me." Then Lord Halifax and the Prime Minister, in each Chamber, moved an Address, conveying deep sympathy to King Edward and Queen Mary, and expressing loyal devotion to the new monarch and the firm conviction that during his reign he would promote the happiness and protect the liberties of all his people. Lord Halifax said that there was no home under the British flag that did not feel King George's death as a personal loss. Ever faithful to the spirit of the Constitution, he had pointed the path of moderation when fires of party blazed dangerously. Lord Snell, Lord Mottistone and the Archbishop of Canterbury paid equally high tribute, and the Address was passed. In the Commons Mr. Baldwin said that King George's gift was a sense of duty which amounted almost to genius. "Thank God," he exclaimed, "this great and humble man knew before his death what his people thought of him. Thank God he fell asleep in the plenitude of his powers, peacefully, before pain had dimmed the acuteness of his mind or sapped the energy of his body." Of the new King, the Prime Minister said there could be unbounded confidence that he would establish the Throne more surely than ever on its only sure basis—the hearts of the people. Mr. Attlee said that every humble household felt that they had lost a friend, and Sir Archibald Sinclair said that King George had been to his people as a father to his family. The resolution to present the Address was adopted unanimously. Lords and Commons then proceeded to Westminster Hall to await the arrival from Sandringham of the remains of King George, and to lead the nation's last memorable tribute to a great sovereign and a great man.

**THE NEW CIVIL LIST.**—A message from King Edward regarding the provision of a new Civil List was read by the Speaker to the House of Commons on *March 11*. In this His Majesty expressed the desire that "the contingency of his marriage" might be taken into account and that suitable provision should be made for the Duke of York as heir-presumptive, though the King mentioned his intention to make that provision for the Duke of York while the revenues of the Duchy of Cornwall were vested in him. A Select Committee was appointed to go into the matter, and its report was published on *April 29*. Resolutions giving effect to the committee's recommendations were adopted by the House by large majorities on *May 5*. The Chancellor of the Exchequer pointed out that whereas the old Civil List amounted to £470,000 a year the new total was only £410,000 a year. The true saving

was £36,900 a year, but that was only a minimum, because the actual saving would amount to a great deal more. A sum of £40,000 would remain undrawn so long as the King was unmarried. There was no Prince of Wales, and the revenues of the Duchy of Cornwall were to be vested in the King, and would be placed by His Majesty's desire at the disposal of the State. Mr. Pethick-Lawrence said that the Labour Party approved the decisions of the committee. In King Edward, he said, they had a man who was in more direct intimate association and friendship with the common people than anybody since the days of Charles II. He was quite certain that the strongest hold that the King had on the Empire was not in the splendour of his palaces or of his Court, but in the fact that he reigned in the hearts of his people, and not less in the hearts of the poorest and humblest than in those of the highest in the land. Sir Archibald Sinclair also supported the proposals on behalf of the Liberal Party. A formal amendment to reduce the sum from £410,000 to £409,000 was rejected by 238 to 102. The necessary Bill was read a second time on May 7, after the defeat by 202 to 95 of a motion by Mr. Attlee urging the transfer of the revenues of the Duchies of Cornwall and Lancaster to the public Exchequer. In committee on May 11 Mr. A. P. Herbert made an unsuccessful attempt to increase from £1,200 to £4,000 the amount available annually for Civil List Pensions, his amendment being negatived by 185 to 110. The third reading was secured on May 12, the bill quickly passed through the House of Lords, and received the Royal Assent on May 21.

**THE NATION'S DEFENCES.**—The problem of strengthening the defence forces of the country was the main concern of the Session. The first proposal was by a private members' bill to set up a Ministry of Defence with an advisory council, but this was withdrawn on Feb. 14. The Prime Minister announced on Feb. 27 that while he would retain the chairmanship of the Committee of Imperial Defence and of the Defence Policy Committee, another Minister would be appointed deputy chairman of these committees, with special duties to supervise and control the whole organisation and activity of the Committee of Imperial Defence and to co-ordinate executive action. Then came the issue of the important White Paper detailing the Government's defence policy, on which a full-dress debate took place in the House of Commons on March 9 and 10—just after Germany's denunciation of the Locarno Pact and the Versailles Treaty and the entry of German troops into the demilitarised Rhineland zone. Mr. Baldwin, moving a resolution approving the policy outlined, said that the steps proposed represented the minimum that was required. The Government's objective was to secure peace for the peoples of the British Empire and for the nations of the world, by means of collective security and friendships. A country which had made its preparations beforehand was in an incomparably stronger position than one which had not done so, and to secure peace we had to have increased armaments ready. Mr. Attlee moved a "no confidence" amendment, but said that the Labour Party supported the measures requisite for pooled security. Sir John Simon laid down

three principles for the Committee of Imperial Defence: that decisions on policy must remain with the Cabinet; that responsibility for execution must rest with the appropriate departments; and that the Committee must remain advisory and consultative. Mr. Churchill asked why the programme had been started so late, and Mr. Lloyd George urged that a proper industrial background was essential to proper defence, that State factories should be created, and that a resolute agricultural policy should ensure the food supply. Mr. Chamberlain wound up the debate by agreeing with the principles of Mr. Lloyd George's suggestions. The amendment was rejected by 378 to 155, and the Prime Minister's motion was carried by 371 to 153. The Lords on March 24 also approved the plans by 109 to 8. Meanwhile Sir Thomas Inskip was selected for the new appointment under the style of Minister for the Co-ordination of Defence with a salary of £5,000 a year. He outlined the progress he had made and the steps he had taken during a debate on May 21. He had already set on foot essential investigations into the questions of battleships, of the Fleet Air Arm and of food supplies in war time, and had established happy contacts with the Chiefs of Staff. He had taken practical steps in the matter of supplies and a detailed survey of resources had been finished. He could not accept forthwith the suggestion of a full-fledged Ministry of Munitions, though the Government's decision on that point was not irrevocable. Sir Thomas again reviewed the position on July 20, when he claimed that with regard to the Navy there was cause for confidence. While maintenance and replacement were proceeding normally, addition and expansion on a growing scale were continuous. As to the Army, he said that the Royal Filling Factory at Woolwich was to be transferred to inland places, and new sources of supply of munitions were being found. Mr. Churchill asked for a secret session, but Mr. Chamberlain said this would stimulate baseless suspicions, though there would be no objection to a deputation of members to the Prime Minister, which, in fact, took place before the adjournment.

**THE BUDGET.**—Mr. Chamberlain's fifth Budget—described by himself as giving "Safety before Comfort," and by the Liberals as one of "shattered hopes"—was introduced on April 21. He first referred to the "astonishing" surplus of £2,941,000, despite the fact that he had had to find nearly £14,000,000 more than he had expected for Supply Services—"a really wonderful demonstration of the buoyancy of our finance." Dealing with the revenue of the preceding year, the Chancellor attributed large increases in the yield from death duties and income-tax to the improvement in the wealth of the public. After stating that on balance the National Debt showed a reduction during the year of £4,500,000 and that the Exchange Equalisation Account continued to show a profit, he said that in the coming year he proposed to maintain the fixed debt charge at £224,000,000, and, as a precaution, to take powers to borrow for the purpose of the contractual sinking fund. He had decided to set aside as a margin for the Supplementary Estimates for the Defence Services a sum of £20,000,000 to meet the additional expenditure foreshadowed in the

White Paper. The total for the Supply Services thus became £562,597,000, and, with £11,300,000 for other Consolidated Fund services, the total expenditure for 1936 was raised to £797,897,000. Turning to the estimated revenue, Mr. Chamberlain said he anticipated that the year would again show a considerable upward movement, and he was budgeting for increases totalling £10,500,000 in Customs and Excise, giving a yield of £314,000,000. He placed income-tax at £248,000,000, a rise of £10,000,000, surtax at £54,500,000, a growth of £3,500,000, and death duties at £89,000,000 or £1,000,000 more. The total for Inland Revenue he put at £420,000,000, and miscellaneous items brought the full estimate of revenue on the existing basis of taxation to £776,606,000, leaving him with a deficit of £21,291,000. The Chancellor next announced that he proposed to check the evasion of income-tax payment by methods such as the transfer of capital abroad by persons who lived here on the income from it, the formation of one-man companies, and the establishment of educational trusts making over money to children although the income was paid to parents as guardians. He expected to save £2,000,000 from the first two in the present year and £4,000,000 in a full year, and from the stopping of educational trusts he expected a saving of £2,500,000 in a full year. The latter sum enabled the Chancellor to increase the statutory income-tax allowance for children from £50 to £60, and to raise the general statutory allowance for married persons from £170 to £180, each concession costing £1,000,000 this year and £2,000,000 in a full year. Next he gave some assistance to the British lager beer trade by imposing a surtax of £1 a barrel upon beer imported from non-Empire countries. The Government, he announced, had decided to continue the Key Industry duties for another ten years, with certain additions and modifications. Arrangements were being made for the formation of a company to finance small businesses, either existing or to be formed, in the Special Areas, the State giving assistance in the expenses of management and guaranteeing against losses up to 25 per cent. of the total loans issued. The net result of these changes would be to increase the revenue by £1,025,000 and to reduce the deficit to £20,266,000. This amount he intended to cover out of the revenue. "Unless it is possible to come to some agreement upon a general scheme of disarmament," declared Mr. Chamberlain, "the cost of defence is going to rise swiftly during the next few years to a peak, and after that it will begin to descend, but the important point to bear in mind is that it will not descend to the old level." In future years, however, a part of the emergency expenditure might properly be met out of loans, in order that industry might not be crippled. The Chancellor said that he proposed to abstract from the Road Fund for the benefit of the taxpayer the £5,250,000 standing to its credit, and he announced that in future years the House would assess the needs of the Fund and vote the required sums instead of giving it the full proceeds of motor licence duties. The amount he had to find was thus reduced to £15,000,000. As the restoration of the country's defences was in the interests of all, it was only right and fair that all should

contribute to it. Therefore he proposed an increase in the standard rate of income-tax of 3d. in the pound, which he estimated would give him £12,000,000 this year. The taxation on tea would be raised by 2d. a pound, which he expected would provide £3,500,000 this year. Thus the revenue would be £798,381,000 and the expenditure £797,897,000, leaving a prospective surplus of £484,000. The Chancellor expressed the view that his new taxation would not seriously affect the improvement in trade or cause any undue hardship. He pointed out that the two main pillars of his financial policy had been the introduction of tariffs and the establishment of cheap money, and recalled that when the tariff was established there was an adverse balance of payments of £104,000,000 a year. The tariff had now converted that into a favourable balance of £37,000,000 and brought a revenue of £34,000,000 a year. After other interesting comparisons, Mr. Chamberlain said that the prospects appeared to promise a full continuance of the returning tide of prosperity. His hope of giving the taxpayer greater relief had been deferred, but, he concluded, "our safety is more to us than our comfort." During the debate on the following day, Mr. W. S. Morrison denied the suggestion that either the Government or any bank or banking house had in contemplation any loan or credit to Germany, except the ordinary commercial credits. Mr. Churchill, on April 23, declared that the defence programme should have been started at least a year earlier. He challenged the Government to deny that Germany had spent at least £800,000,000 on armaments in 1935 alone. He thought that in the lifetime of that Parliament there would either be a change in international relationships, which would call a real halt in the race, or an explosion, and he felt that a strong Britain might just swing the balance towards peace. Mr. Chamberlain said that the Government were watching the situation carefully, and they had reached the conclusion that it was not necessary at present to assume special powers over industries. The Finance Bill was read a first time on April 28 after all the resolutions had been carried, and the Special Areas (Reconstruction) Bill was also introduced. The latter measure was read a second time on May 7. The Chancellor said that it was an experiment, which, if it proved successful, might be enlarged. The provisions of the Bill, it was explained, would be automatically extended to areas other than those defined as special areas if Parliament so decided. The remaining stages were quickly passed and the Bill received the Royal Assent on May 29. The second reading of the Finance Bill was obtained on May 20 after a motion for rejection by Mr. Lees-Smith had been negatived by 291 to 136. During the debate Mr. Chamberlain said he was afraid that the country must make up its mind that for some time high taxation was going to be an inevitable evil. The Chancellor revealed during the third reading discussion on July 3 that a deficit for the year was already certain, and when the House of Lords gave the Bill a second reading on July 13 Lord Templemore went further and said that the deficit was estimated at £21,291,000, which was entirely due to the extra twenty millions having been allotted to the Defence Services. The Royal Assent was given on July 16.

**THE BUDGET LEAKAGE.**—Rumours of a "leakage" of Budget secrets were brought to the notice of the House of Commons on April 27, when the Chancellor of the Exchequer said that Lloyd's were enquiring into the circumstances. As a result of that investigation, both Houses on May 5 adopted a resolution to establish a tribunal to enquire whether any unauthorised disclosure was made of information relating to the Budget. The tribunal heard evidence from a large number of witnesses, including Mr. J. H. Thomas and Sir Alfred Butt, and in their report found that there had been an unauthorised disclosure. The House of Commons on June 11 discussed the report, after Mr. J. H. Thomas and Sir Alfred Butt had both made personal statements. Mr. Thomas, who had previously resigned his office and who won a good deal of sympathy, refused to criticise the report, although he pointed out that there was no Court of Appeal from the tribunal. He declared that he never consciously gave a Budget secret away. He announced that he would resign his seat and said that he had no strength left to fight a bye-election; moreover, victory would not wipe out the stain. After recalling his 27 years as a member, Mr. Thomas passed slowly from the House to the accompaniment of a warm though subdued cheer. Sir Alfred Butt took a different line. He strongly denied having received any confidential information and declared that he had not intended to resign, but in view of Mr. Thomas's decision he would follow his example. He left the House in silence. During the debate which followed this painful scene, Mr. Chamberlain said that he had obtained an assurance from Lloyd's that all underwriters were being asked not to accept insurance of contingency risks unless the insurers had a legitimate interest to be covered. Lloyd's had also accepted his suggestion to accept no insurance of Budget risks between the end of the financial year and the opening of the Budget. The Government's motion accepting the findings of the tribunal was agreed to after the defeat, by 227 to 135, of a Labour amendment asking the Government to take appropriate action.

**THE SCHOOL-LEAVING AGE.**—One of the first tasks to which the House of Commons gave attention was the consideration of Bills raising the school-leaving age from 14 to 15 in England, Wales and Scotland. They provided that exemption might be given if the local education authority were satisfied that employment of benefit to the child was available. The Bill for England and Wales also enabled local authorities, for the benefit of children over 11, to enter into agreements with the managers of voluntary schools to give financial aid towards the enlargement and improvement of existing voluntary schools, including the provision of land for sites. Moving the second reading on Feb. 13, Mr. Oliver Stanley explained that the school age would not be raised until Sept. 1, 1939, because it would not be possible for the vast majority of educational authorities to be ready before that date, owing to the problem of providing buildings and the training of teachers. The Bill, however, did not prevent any education authority raising the age earlier if its arrangements were complete. He estimated that as soon as the Bill came into effect they would

require something like 2,500 additional teachers, and within a year or two that number would be doubled. The most contentious part of the Bill, Mr. Stanley agreed, was that which dealt with the whole problem of exemptions. Exemption for employment was to be given only to a particular child for a particular employment. Local authorities would have complete discretion and could hold over exemptions until the end of a term. It was because of the exemption clauses that Mr. Lees-Smith moved the rejection of the Bill. Lord Eustace Percy declared that the Government could not drop exemptions, because they had been promised at the General Election. The amendment was negatived by 282 to 152, and the Bill was read a second time and sent to a Standing Committee. The third reading was agreed to on May 27, after a motion for rejection had been defeated by 229 to 33. During the Committee stage in the House of Lords on June 30, the Archbishop of Canterbury moved an amendment, the effect of which would be to enable education authorities to give grants in respect of the alteration of junior non-provided schools to provide increased accommodation for children displaced by the necessary re-organisation of senior schools. This was opposed by the Government, but was carried by 32 to 29. The Peers gave the third reading on July 13, but when the Commons considered the amendments on July 23, they refused to agree with that sponsored by the Primate. The House of Lords accepted the position and the Royal Assent to the Bill was given on July 31, when both Houses adjourned for the summer recess.

**THE TITHE PROBLEM.**—An effort to settle the tithe question was made by the Tithe Bill, which was explained by Mr. Walter Elliot when he moved the second reading in the House of Commons on May 13. He said that tithe would be extinguished by the taking over by the Exchequer of the rights of the present tithe owners, who would be recompensed by a three per cent. Government stock, amounting to £70,000,000, redeemable in sixty years. The first half-yearly instalment of redemption annuity would become payable on April 1, 1937, and the rate would be £91 11s. 2d. per £100 of the tithe rent charge in place of £105 as now. The full life interest of incumbents whose incomes were below £500 would be assured, and pensions would be secured by means of a payment to Queen Anne's Bounty of a sum equivalent to the increased amount receivable in respect of non-agricultural land. It was expected that that sum would enable the Church to maintain the cathedrals, and £2,000,000 would be provided with a view to mitigating the hardships that would otherwise be suffered by the poorer clergy. The rating authorities would be compensated for loss of rates. The Bill was read a second time after a motion for rejection had been defeated by 258 to 132. In committee on the money resolution on May 19, Mr. Elliot said that the Government intended to move an amendment for the purpose of preserving fully the life interest of existing incumbents. No extra tithe would fall upon the tithe payer or the taxpayer, and the Church authorities would be empowered to devote for the purpose part of the stock which they would receive as compensation for the extinguishment of tithe.

During the report stage the Government had a majority of only three on a Conservative amendment providing that no action for the recovery of tithe should be taken until payment was at least three months overdue. The bill was given a third reading on *June 29*, an amendment for rejection being negatived by 251 to 128. Mr. Ramsbotham claimed that the scheme had been altered in such a way that the life interests of all existing incumbents of the Church of England had been safeguarded, and the Church had been given time to rearrange and improve their finances. The Archbishop of Canterbury stated on the second reading in the House of Lords on *July 7* that the Church authorities had neither asked for nor prompted the bill, and they would have been content to have tithe dealt with on the lines of the Act of 1925. The Bill received the Royal Assent on *July 31*.

**UNEMPLOYMENT ON THE LAND.**—One of the measures of social reform mentioned in the King's Speech was generally welcomed—the Unemployment Insurance (Agriculture) Bill. Mr. Ernest Brown, moving the second reading on *Feb. 6*, said that it would bring about 750,000 agricultural workers into the unemployment insurance system, but under a separate scheme. The weekly rates of contribution by employers and employed would range from a penny to 4½d., according to the age and sex of the worker, and the Government would contribute at a rate equal to half the aggregate contribution of employers and employed. The weekly rates of benefit would range from 3s. 6d. and 4s. respectively to girls and boys under seventeen, to 12s. 6d. and 14s. respectively to women and men above twenty-one. The scheme would be self-contained from a financial point of view. There would be a separate account in the Unemployment Fund. Of the 750,000, about 50,000 would be women and girls and 700,000 men and boys. Mr. Buchanan moved its rejection on the ground that the rates of benefit were substantially lower than those of workers in industrial employment. His motion was rejected by 231 to 2, and the bill was read a second time and referred to a standing committee. The Royal Assent was given on *April 10*.

**THE MEANS TEST.**—Bitter opposition was shown to the new draft Unemployment Assistance Regulations when they came up for confirmation in the House of Commons on *July 21*. Mr. Brown, submitting the regulations for approval, said that the principles of relief must be that the rates and conditions of relief should not be the same as those of insurance benefit for that would wreck the contributory system, and that the test of need must be a household test in justice to the taxpayer and to the unemployed. He declared that some local authorities were far more generous with the taxpayers' money than with the ratepayers' money. Every one of the main changes proposed was in favour of the applicant, and the household test had been amended so that no member of a household would be forced to leave it. The regulations would benefit 200,000 cases and would distribute £750,000 a year more among the existing number of applicants. Mr. Arthur Greenwood said that the Labour Party would

accept no regulations which contained a means test because that meant subjecting the unemployed to the Poor Law. When the discussion was continued on the following day, Government speakers were interrupted frequently, and the House sat throughout the night until late on the third day allotted, producing the longest sitting for 55 years. While Sir John Simon was winding up the debate, three I.L.P. members were suspended for disorder. Eventually the closure had to be moved, and the Regulations were confirmed after several divisions which gave the Government majorities of about 200. The House of Lords approved them without a division on *July 27*.

**HELP FOR COTTON TRADE.**—An attempt to adapt cotton production to consumption was made in the Cotton Spinning Industry Bill, which was based on the report of the Colwyn Committee. Moving the second reading on *Feb. 4*, Mr. Runciman said that the Bill proposed that redundant spindles up to a considerable value should be wiped out and paid for out of funds provided by a levy on those who continued in the trade. It would also prevent the installation and working of new machinery in the first three years of the lifetime of the proposals. Mr. Clynes, moving the rejection, declared that the trade unions were against trying to reorganise a single section out of the four into which the industry was divided. His motion was defeated by 237 to 149, and the Bill was read a second time and sent to a Standing Committee. Mr. Runciman, on *March 31*, on the report stage moved a new clause to provide that the advisory committee should consist of six persons appointed by the Board of Trade, three of them after consultation with the Federation of Master Cotton Spinners' Associations. This was agreed to, and the Bill was read a third time after the defeat, by 188 to 124, of a motion for rejection by Mr. Clynes. The Bill received the Royal Assent on *May 29*, the appointed day for the operation of the measure being subsequently fixed for *Sept. 14*.

**REORGANISING THE SUGAR INDUSTRY.**—A Government Bill to continue the sugar beet subsidy and to set up a Sugar Commission and place all the factories under a single corporation was given the Royal Assent on *May 21*. Moving the second reading on *Feb. 10*, Mr. Walter Elliot said that he hoped the amalgamation of the factories would be voluntary, but if it were compulsory, the scheme would not be too arbitrary. When the third reading was obtained on *April 7*, the Minister for Agriculture claimed that they were launching a big new industry in Great Britain, and were turning from a temporary to what they hoped would be a permanent basis. In the House of Lords, which gave a second reading on *May 7*, Earl De La Warr said that the scheme would keep in use some £5,000,000 worth of capital and nearly 400,000 acres of land, and would retain in employment at least 40,000 men.

**THE PROROGATION.**—Parliament reassembled on Oct. 29, after a three-months' recess, and was immediately prorogued, and the new Session opened on *Nov. 3*.

THE ninth Parliament of King George V. and the First of King Edward VIII. elected on November 14, 1935. 387 Conservatives; 33 Liberal Nationalists; 8 National Labour; 2 Nationals; 1 Independent. Total for National Government, 431. Labour 154; Liberals 17; Independent Liberals 4; Independent Labour Party 4; Independents 4; Communist 1. Total against National Government, 184.

## Government and Public Offices.

## ADMIRALTY, H.M. (see pp. 409-410).

MINISTRY OF AGRICULTURE  
AND FISHERIES.

Whitehall Place, S.W. 1: 43 Parliament Street,  
S.W. 1; King's Buildings, Smith Square, S.W. 1;  
60-64, Strand, W.C. 1.

THE MINISTRY OF AGRICULTURE AND FISHERIES was constituted pursuant to the Ministry of Agriculture and Fisheries Act, 1919 (9 and 10 Geo. V. Ch. 91) which amended the Board of Agriculture and Fisheries Acts, 1889 to 1909. The Board of Agriculture for Great Britain was established in 1889. By the Board of Agriculture and Fisheries Act of 1903, the duties of the Fisheries Department of the Board of Trade were transferred to the Board of Agriculture, the designation of which was at the same time altered. The expression "agriculture" is defined to include "horticulture."

The administration of the *Ordnance Survey* and of *Kew Gardens* is under the control of the Ministry.

Estimates, 1936, £2,549,698.

*Minister of Agriculture and Fisheries*, The Rt. Hon. William Shepherd Morrison, M.O., K.C., M.P. £2,000  
*Private Secs.*, R. H. Franklin; A. W. Keeble, M.B.E.; H. Gardner.

£396 to £575  
£456 to £634

### MARKETING OFFICER, A. F. SMITH,..... EXECUTIVE COUNCIL OF THE IMPERIAL AGRICULTURAL BUREAU,

2 Queen Anne's Gate Buildings, S.W. 1.

This Inter-Imperial organisation, composed of  
nominees of the Governments of the United Kingdom,  
the Dominions and India, and of the Colonial Office,  
was set up in 1929 to administer a number (8) of bureaux  
organised to act as clearing houses of information on  
research in eight specialised fields of agricultural  
science, and financed from a common fund provided by  
the Governments of the Empire. In 1933 it was further  
instructed by the Governments of the Empire to super-  
vise the administration and finances of the Imperial  
Institute of Entomology and the Imperial Mycological  
Institute. The Annual Reports of the Council are sub-  
mitted to each of the Governments through their several  
members on the Council. The bureaux are attached to  
appropriate research institutions, but are distinct from  
them.

**Chairman**, Sir C. Howell Thomas, K.C.B., K.C.M.G.

**Secretary**, Sir David Chadwick, C.S.I., C.I.E.

#### BUREAU.

**Soil Science**, Rothamsted Experimental Station,  
Harpenden, Herts.—**Director**, Sir E. John Russell,  
O.B.E., D.Sc., F.R.S.  
**Animal Health**, Veterinary Research Laboratory,  
Weybridge, Surrey.—**Director**, W. Horner Andrews,  
D.Sc., M.R.C.V.S.  
**Animal Nutrition**, Rowett Research Institute, Aber-  
deen.—**Director**, Sir John Orr, D.S.O., M.C., M.A., M.D.,  
D.Sc., F.R.S.  
**Animal Genetics**, Institute of Animal Genetics, Edin-  
burgh University.—**Director**, F. A. E. Crew, M.D.,  
D.Sc., Ph.D., F.R.S.E.  
**Plant Genetics (for Crops other than Herbage)**, Plant  
Breeding Institute, Cambridge University.—  
**Director**, Sir Rowland H. Biffen, M.A., F.R.S.  
**Plant Genetics (Herbage Plants)**, Welsh Plant Breed-  
ing Station, Aberystwyth.—**Director**, R. G. Scaple-  
don, O.B.E., M.A.  
**Fruit Production**, East Malling Research Station,  
Kent.—**Director**, R. G. Hutton, C.B.E., M.A., V.M.H.  
**Agricultural Parasitology**, Institute of Agricultural  
Parasitology, St. Albans.—**Director**, R. T. Leiper  
M.D., D.Sc., F.R.S.

#### IMPERIAL INSTITUTE OF ENTOMOLOGY

Natural History Museum, S.W. 7.

**Director**, Sir Guy A. K. Marshall, C.M.G., D.Sc., F.R.S.

#### IMPERIAL MYCOLOGICAL INSTITUTE

Ferry Lane, Kew, Surrey.

**Director**, S. F. Ashby, B.Sc.

### AGRICULTURAL MARKETING FACILITIES COMMITTEE FOR GREAT BRITAIN.

**Chairman**, Lt.-Col. Sir John R. Chancellor, G.C.M.G.,  
G.O.V.O., D.S.O.

**Other Members**, W. H. Coates, Ph.D.; H. G. Howitt,  
D.S.O., M.C., F.O.A.; D. W. Innes; W. R. Smith, J.P.;  
Sir W. Norman Vernon, Bt.

**Secretary**, W. C. Tame (Asst. Principal, Ministry of  
Agriculture and Fisheries, Whitehall Place, S.W. 1.)

#### AIR MINISTRY (see pp. 422-3).

### COLLEGE OF ARMS or HERALDS' COLLEGE.

Queen Victoria Street, E.C. 4.

(Hours : 10 to 4.)

**Earl Marshal**, His Grace the Duke of Norfolk, P.O.  
Kings or Arms.

**Garter**, Sir Gerald Woods Wollaston, G.C.V.O., F.S.A.

**Clarenceux**, Arthur William Stuart Cochrane, C.V.O.

**Norroy**, Algar Henry Stafford Howard, C.V.O., M.O.

## SIX HERALDS.

Lancaster (and Karl Marshall's Secretary), Archibald George Blomefield Russell, M.V.O., F.S.A.  
 Somerset (and Registrar), Hon. George Rothe Bellow, M.V.O.  
 Chester, John Dunamace Heaton-Armstrong.  
 Richmond, Henry Robert Charles Martin, F.S.A.  
 Windsor, Alfred Trego Butler, M.C., F.S.A.  
 York, Aubrey John Toppin, F.S.A.

## FOUR PURSUIVANTS.

Rouge Dragon, Eric Neville Gellier, M.C., F.S.A.  
 Rouge Croix, Philip Walter Kerr, F.S.A.  
 Portcullis, Anthony Richard Wagner, F.S.A.  
 Bluemantle, Richard Preston Graham-Vivian, M.C.

## COURT OF THE LORD LYON.

H.M. Register House, Edinburgh.

Lord Lyon, King of Arms, Sir Francis James Grant, K.C.V.O., LL.D., W.S., F.S.A. Scot. £738

## Three Heralds (£25 each).

Marchmont, John H. Stevenson, M.B.E., K.C., F.S.A. Scot.  
 Rothesay, Sir John Mackintosh Norman Macleod, Bt., C.A.

Albany, Thomas Innes of Learney, F.S.A. Scot. Advocate.

## Three Pursuivants (£16 13s. 4d. each).

Falkland, Lt.-Col. John William Balfour Paul, D.S.O.  
 Unicorn, Major H. A. B. Lawson.  
 Carrick, Sir Alexander Seton, Bt.  
 Lyon Clerk and Keeper of Records, Harold Andrew Balvaird Lawson £337  
 Procurator-Fiscals, John MacGregor, w.s.; Malcolm Robertson MacGregor, w.s.  
 Herald Painter, A. G. Law Samson.

## IRISH HERALDS' COLLEGE,

Office of Arms, The Castle, Dublin.

Ulster King of Arms, Major Sir Neville R. Wilkinson, K.C.V.O., F.S.A.

## Two Heralds.

Dublin, Major Guillemore O'Grady, M.C.  
 Cork, Capt. R. A. L. Keith.

## Two Pursuivants

Athlone, (vacant).  
 Cork (vacant).

Registrar and Deputy Ulster, Thomas Ullick Sadleir, M.A., M.B.I.A.

## COUNCIL FOR ART AND INDUSTRY.

Board of Trade, Great George St., S.W. 1.

The Council was appointed by the President of the Board of Trade in January 1934 to deal with questions affecting the relations between Art and Industry.

Chairman, Frank Pick.  
 Vice-Chairman, Sir A. Steven Bilsland, Bt., M.C.  
 Secretary, G. L. Watkinson, M.C.

## BRITISH BROADCASTING CORPORATION.

Broadcasting House, Portland Place, W. 1.

The B.B.C. was instituted in 1927 as successors to the British Broadcasting Company, whose licence expired Dec. 31, 1926. The Chairman, Vice-Chairman, and other Governors, are appointed by H.M. Government.

The following Broadcasting Stations were in operation in October, 1936:—Long Wave National Programme Transmitter, Droitwich; Medium Wave, London, North, Scottish and West Regional dual programme transmitting stations; Midland Regional, Northern Ireland Regional, Bournemouth, Burghhead, Newcastle, Plymouth and Aberdeen single programme transmitting stations; Short Wave Empire transmitting station, Daventry.

The number of Licences in force on June 30 of the last eight years was (1927) 2,307,000; (1928) 2,519,000; (1929) 2,702,000; (1930) 3,159,000; (1931) 3,780,000; (1932) 4,731,663; (1933) 5,531,818; (1934) 6,333,802; (1935) 7,077,095; (1936) 7,650,599, not including licences issued to the blind.

Income and expenditure of the B.B.C. for 1934 and 1935:—

## INCOME.

	1934.	1935.
From Licences.....	£1,710,286	£2,033,262
From other sources.....	318,697	434,310
Total.....	£2,058,983	£2,477,572

## EXPENDITURE.

	1934	1935
Programmes.....	£915,025	£1,120,572
Engineering.....	334,958	380,620
Other.....	582,510	651,300
Total.....	£1,832,493	£2,148,411

Chairman, R. C. Norman..... £3,000  
 Vice-Chairman, Harold G. Brown..... £1,000  
 Other Governors, Mrs. M. A. Hamilton; Rt. Hon. H. A. L. Fisher, D.C.L., F.R.S.; Caroline, Viscountess Bridgeman, D.B.E.,..... each £700  
 Director-General, Sir J. C. W. Reith, G.C.B., D.C.L., LL.D.  
 Deputy Director-General, Vice-Adm. Sir Charles D. Carpendale, C.B.  
 Controllers of Divisions:—  
 Engineering, Sir Noel Ashbridge.  
 Administration, B. E. Nicolls.  
 Programmes, C. G. Graves, M.C.  
 Public Relations & Publications (Editorial), Sir Stephen Tallents, K.C.M.G., C.B., C.B.E.

## CENTRAL VALUATION COMMISSION.

New Public Offices, Parliament St., London, S.W. 1.

Constituted under Section 57 of the Rating and Valuation Act, 1925, for the purpose of promoting uniformity in valuation for rating purposes in England and Wales. The members are appointed by the Minister of Health, the County Councils' Association, the Association of Municipal Corporations, the Urban District Councils' Association and the Rural District Councils' Association.

Chairman, Sir Edward J. Holland, D.L., J.P.  
 Vice-Chairman, Sir James Curtis, K.B.E., D.L., J.P.  
 Secretary, F. J. Ogden, M.B.E.

## CHARITY COMMISSION.

Ryder Street, St. James's, S.W. 1.

The Charity Commission was appointed by Act of Parliament in 1853 "for the better administration of Charitable Trusts in England and Wales." In 1874 the powers previously exercised by the Endowed Schools Commissioners were temporarily transferred to the Charity Commission, and in 1879 the transfer was made permanent. The powers of the Commissioners over all endowments held for purely Educational purposes have now been transferred to the Board of Education in pursuance of Orders in Council made under the Board of Education Act, 1899.

Chief Commissioner, E. Macpherson..... £1,650  
 Second Commissioner, H. D. S. Leake £1,200 to £1,400  
 Parliamentary Commissioner, Edward Clement Davies, K.C., M.P. .... anp.  
 Secretary, J. E. C. Adams..... £1,200  
 Asst. Commissioner and Principal Clerks, W. F. Fox; G. B. Rooke; A. E. McLaren, O.B.E.; C. N. Hope-Wallace, M.B.E.; F. B. Jackson..... £850 to £1,000  
 1st Class Clerks, S. E. Turner; L. T. Ford; J. C. G. Pownall; P. T. Carden, M.C.; C. G. Barnardo

2nd and Class Clerks, G. E. L. Pardington, T.D.; M. J. Richards, M.C.; W. Cairns; C. J. Highton; H. Everett £315 to £625  
 Accountant, Official Trustees' Dept., A. V. Masham, I.S.O. .... £847 to £953  
 Asst. do., A. Stewart ..... £634 to £738  
 Heads of Divisions do., P. C. Gunner; R. Heath £515 to £634  
 Librarian and Clerk to Sec., H. A. Anderton £515 to £634  
 Assistant Draftsman, W. A. Billing ..... £515 to £634  
 Officer in Charge of Registration and Returns, E. W. Perkins ..... £515 to £634

## THE GOVERNMENT CHEMIST

(Government Laboratory),

13 Clement's Inn Passage, Strand, W.C. 2.

Government Chemist, J. Fox, O.B.E., D.S.C., F.I.C. £1,361 to £1,650  
 Deputy Government Chemist, A. More, A.R.C.S., F.I.C. £1,058 to £1,161  
 Superintendent Chemists, A. G. Francis, D.Sc., F.I.C.; F. S. Ammonier, B.Sc., F.I.C.; A. J. H. Gage, F.I.C.; F. G. H. Tate, F.I.C.; T. W. Harrison, B.Sc., F.I.C.; J. R. Nicholls, B.Sc., F.I.C. .... £850 to £1,010  
 Senior Chemists, J. E. Byles, B.Sc., F.I.C.; C. A. Adams, B.Sc., F.I.C.; F. R. Ennos, B.A., B.Sc., F.I.C.; A. T.

Parsons, B.Sc., F.I.C.; G. F. Sheppard; A. H. Rheinlander, N.Sc., F.I.C.; E. H. Nurse, B.Sc., F.I.C.; B. A. Ellis, M.A., F.I.C.; A. F. Weiss, B.Sc., A.I.C.; R. Satchell, M.A., A.I.C.; J. King, F.I.C., £680 to £800  
*Chemists, Higher Grade*, J. A. Heald, M.C., B.Sc., F.I.C.; J. Stephenson, B.Sc., A.I.C.; S. A. Ashmore, B.Sc., A.I.C.; J. W. Pooley, B.Sc., A.I.C., £580 to £680  
*Chemists*, C. E. Barton, B.Sc.; P. M. Mooney, B.Sc., F.I.C.; C. H. Croft, M.Sc., A.I.C.; R. H. Settle, B.A., A.I.C.; E. H. Williams, B.Sc., A.C.G.F.C., A.I.C.; P. McGregor, B.Sc., F.I.C.; B. E. Dixon, M.Sc., A.I.C.; J. F. Hirst, B.Sc., A.I.C.; J. R. Fraser, B.Sc., F.I.C.; E. H. Warren, B.A.; C. O. Harvey, B.Sc., A.R.C.S., A.I.C.; J. L. Buchan, M.Sc., A.I.C.; J. W. A. Woodley, B.Sc., A.I.C.; E. S. Hiscocks, M.Sc., A.I.C.; J. Longwell, B.Sc., A.I.C.; H. L. Bolton, A.I.C.; H. G. Smith, B.Sc., Ph.D., A.I.C.; A. E. Martin, B.Sc., Ph.D.; P. J. Hardwick, M.Sc., A.I.C.; A. A. W. Russell, B.A., B.Sc.; J. G. N. Gaskin, B.Sc., F.I.C.; E. Q. Laws, B.Sc., A.I.C.; C. R. Hoskins, B.Sc., Ph.D.; H. K. Whalley, B.A., B.Sc., Ph.D.; H. C. Gull, M.Sc.; E. G. Kellett, B.A., B.Sc., Ph.D., A.I.C.; J. G. A. Griffiths, B.A., Ph.D., A.I.C.; W. G. Moffitt, B.Sc., Ph.D., A.I.C.; G. W. G. MacLennan, M.A., B.Sc., Ph.D.; L. A. Warren, B.Sc., Ph.D., A.I.C.; L. G. Groves, M.Sc.; E. J. Boorman, B.Sc., Ph.D., A.R.C.S., D.I.C.; E. I. Johnson, M.Sc., D.I.C.; R. S. Alcock, M.A., Ph.D.; R. L. Hambridge, B.Sc., A.I.C., A.R.S.M.; J. A. C. McClelland, B.Sc., Ph.D., A.I.C., £275 to £580  
*Technical Chemist*, R. Gilbert, B.Sc.  
*Staff Officer*, I. Wortman, £515 to £634  
*Senior Clerks*, H. Blanks; G. F. Hobdell, £396 to £515

## CIVIL SERVICE COMMISSION,

Burlington Gardens, W. 2.

*1st Commissioner*, Sir Roderick Meiklejohn, K.B.E., C.B. (personal), £2,200  
*Assistant Commissioners*, G. G. Mennell (Secretary); L. Blaikie (Director of Examinations), each £1,150 to £1,450  
*Asst. Sec.*, T. L. Hedley, (personal) £800 to £1,100  
*Senior Clerks*, F. L. Howard; S. W. T. Cole, £680 to £847

## COLONIAL OFFICE,

Downing Street, S.W. 2.

The business of the Colonies was, until 1851, included in the functions of the Home Secretary, to be transferred in that year to the newly-created "Secretary for War." In 1854 the outbreak of the Russian War led to the appointment of a Secretary of State for the Colonies (to relieve the War Secretary of Colonial business). The expenditure, Salaries, etc., of the Colonial Office for 1932-33 was £144,800.  
*Secretary of State for the Colonies*, Rt. Hon. William Ormsby-Gore, M.P., £5,000  
*Private Secretaries*, E. Boyd, C.M.G.; T. W. Davies; Rear-Admiral Arthur Bromley, C.M.G., C.V.O. (Ceremonial and Reception Secretary).  
*Parliamentary Private Sec.*, R. Ashteton, M.P. *unp.*

UNDER-SECRETARIES.

*Permanent*, Sir John Loader Mafey, G.C.M.G., K.C.B., K.C.V.O., C.B.I., C.I.E., £3,000  
*Private Sec.*, A. B. Cohen.  
*Parliamentary*, The Earl De La Warr, £1,500  
*Private Sec.*, F. J. Pedler.  
*Deputy Permanent Under Sec.*, Sir John E. Shuckburgh, K.C.M.G., C.B., £2,200  
*Assistant Under-Secretaries*, Sir Cecil Boltonley, K.C.M.G., C.B., O.B.E.; Sir George J. F. Tomlinson, K.C.M.G., C.B.E.; Sir Cosmo Parkinson, K.C.M.G., O.B.E., £1,450 to £2,650  
*Legal Adviser*, Sir Gratian Bushe, K.C.M.G., C.B., £1,400 to £1,650  
*Assistant do.*, H. H. Duncan, £1,200 to £1,400  
*2nd Asst. do.*, K. O. Roberts-Wray, £800 to £1,000  
*Legal Assistant*, W. L. Dale, £313 to £635  
*Chief Medical Adviser*, Sir Thomas Stanton, K.C.M.G., M.D., F.R.C.P., £1,500  
*Asst. Medical Adviser*, A. J. R. O'Brien, C.M.G., M.C., M.B., M.R.C.P.  
*Economic & Financial Adviser*, Sir John Campbell, K.C.M.G., C.B.I., O.B.E., £1,500  
*Assistant Secretaries*, H. R. Cowell, C.M.G.; K. V. Vernon, C.B.; J. E. W. Flood, C.M.O.; O. G. R. Williams, C.M.O.; Maj. R. D. Furze, C.M.G., D.S.O.; H. Beckett; C. J. Jeffries, O.B.E. (Es-tablishment

*Officer*); J. A. Calder; G. L. M. Clauson, C.M.O., O.B.E.; H. F. Downie, O.B.E.; A. J. Dave, O.B.E.

*Principals*, A. Cooke; G. A. Jones, O.B.E.; S. M. Campbell; E. B. Boyd, C.M.O.; A. B. Acheson; G. E. J. Gent, D.S.O., O.B.E., M.C.; F. J. Howard, O.B.E.; G. H. Creasy; Capt. A. F. Newbolt; G. N. Irby; Major G. S. M. Hutchinson; A. Bevir; J. J. Paskin, M.C.; T. I. K. Lloyd; G. F. Seel; J. B. Sidebotham; S. Robinson; K. W. Blaxter; W. J. Blegg; F. G. Lee; E. B. Bowyer; S. Caine; C. G. Eastwood; J. M. Martin; A. H. Poynton; N. L. Mayle (acting); J. G. Hibbert, M.C. (acting); J. H. Emmens (acting); S. I. James (acting) £800 to £1,100  
*Assistant Principals*, P. H. Morris; J. B. Williams\*; S. E. V. Luke; D. L. P. Tovey; F. J. Pedler; T. W. Davies; A. B. Cohen; I. M. R. MacLennan; C. A. Grossmith; J. Fletcher Cooke; C. Y. Carstairs; T. Smith; E. Melville; A. R. Thomas, £277 to £634  
*Publicity Officer*, A. Ridgway, £720  
*Accountant*, V. H. Boyse, O.B.E., £680 to £847

### COMMISSIONERS OF CROWN LANDS, 55 Whitehall, S.W. 1.

**THE CROWN LANDS.**—The Land Revenues of the Crown in England and Wales have been collected on the public account since 1760, when George III. surrendered them and received a fixed annual payment or Civil List. At the time of the surrender the gross revenues amounted to about £80,000 and the net return to about £12,000.

The Land Revenues in Ireland have been carried to the Consolidated Fund since 1800; from April 2, 1903, as regards Southern Ireland, they have been collected and administered by the Irish Free State.

The Land Revenues in Scotland were transferred to the Commissioners in 1833.

In the year ended March 31, 1936, the total Receipts by the Commissioners were £1,981,588, of which amount £200,000 was from the Mines. The Expenditure including Property Tax allowed was £571,137. The sum of £1,300,000 was paid to the Exchequer in 1935-36 as Surplus Revenue, being a net sum from which no deductions have to be made for administration.

*Commissioner (ex-officio)*, The Minister of Agriculture and Fisheries ..... £1,000 and  
*Permanent Commissioner*, C. L. Stocks, C.B. £1,650

*Private Sec.*, F. E. J. Behn.

#### OVERSEAS SETTLEMENT BOARD.

Among the recommendations of an Inter-Departmental Committee on Migration Policy, which reported in 1934, was one for the setting up of an Oversea Settlement Board, the functions of which would be to consider and advise the Secretary of State upon specific proposals

o Seconded for service in Australia.

† Seconded for service in Union of S. Africa.

‡ Seconded for service in Canada.

for schemes of migration within the Empire and upon any matter which might be referred to it by him. H.M. Government accepted this recommendation and the Board was appointed in Feb. 1936. It is at present constituted as follows:—

**Chairman, The Parliamentary Under Secretary of State for Dominion Affairs.**

**Other Members (Official), E. G. Machtig, C.M.G., O.B.E.; A. P. Waterfield, C.B.; (Unofficial), The Dowager Marchioness of Reading, Dr. W. G. S. Adams; George Gibson; H. J. Mitchell; Brig.-Gen. J. J. H. Nation, C.V.O., D.S.O.**

**Secretary, G. F. Plant, C.B.E. (Dominions Office).**

### THE DUCHY OF CORNWALL.

Buckingham Gate, S.W. 1.

Cornwall was created a Duchy by Edward III. for the support of his eldest son, afterwards created Prince of Wales, and the eldest son of the Sovereign has since that time been born Duke of Cornwall.

The Revenue of the Duchy of Cornwall in the year ended December 31, 1926, was £24,425, and was derived principally from Rents and Profits of Courts, £105,817. The Payments include £48,057, Outlay for the benefit of the Estate; £35,304, Deductions under various Acts; £14,203, Allowances, Donations, and Charities; and £19,745 Expenses of Management. The sum of £66,713 was paid on account of His Royal Highness the Prince of Wales.

#### The Council.

The Earl of Radnor (Lord Warden of the Stannaries and Keeper of Privy Seal); Sir Edward Robert Pencock, C.V.O. (Receiver-General); The Earl Fortescue, M.C.; Adm. Sir Lionel Halsey, C.M.G., C.V.O., K.C.B., C.B.; Walter T. Monckton, M.C., K.C. (Attorney-General); R. Clive W. Burn (Sec. and Keeper of Records).

#### Other Officers of the Duchy of Cornwall.

**Auditor, Sir Laurence E. Halsey, K.B.E.**

**Solicitor, R. E. Tucker.**

**Ass. Secretary, P. G. T. Kingsley.**

**Chief Clerk and Surveyor, H. W. Kirk.**

**Deputy Receiver, G. A. Conyard.**

**Sheriff (1936-37), Capt. C. H. Tremayne.**

### THE DUCHY OF LANCASTER.

Lancaster Place, Strand, W.C. 2.

The estates and jurisdiction known as the Duchy and County Palatine of Lancaster have been attached to the Crown since 1399, when John of Gaunt's son came to the throne as Henry IV. Edward III. erected Lancashire into a County Palatine for his son John of Gaunt, Duke of Lancaster, in 1377.

The Revenue of the Duchy of Lancaster was £29,000 in 1936 and amounted to £163,000 in the year ended December 31, 1935. Contributory items include Rents and Profits of Courts, £171,547; Routhies and Dues, £35,493; Expenditure, £17,024; Outlay for the benefit of the Estate, £4,558; Allowances, Donations, and Charities, £1,925. Net salary of the Chancellor of the Duchy; and £11,547, Expenses of Management. The sum of £101,000 was paid for His Majesty's use to the Keeper of His Majesty's Privy Purse.

**Chancellor, Rt. Hon. Sir J. C. C. Davidson, C.V.O., C.B., C.B., M.P.** £2,000

**Private Sec., Norman R. C. Warwick, M.V.O., O.B.E.**

**Vice-Chancellor, Sir Courthope Wilson, K.C.**

**Attorney-General, Sir Herbert Canfield, K.C.**

**Receiver-General, Major Clive Alexander, C.M.G., C.V.O., O.B.E.**

**Auditor, A. Binnie.**

**Clerk of Council and Keeper of Records, Louis F. Fergusson, C.V.O.**

**Solicitor, E. J. Howard.**

**Surveyor-General and Deputy Receiver-General, T. F. Vaughan Prickard, C.V.O.**

**Chief Clerk, Norman R. C. Warwick, M.V.O., O.B.E.**

**Steward of the Manors, P. W. Millard, LL.D.**

**Registrar, Preston District, J. M. Worthington.**

**Do. Manchester District, Harold Roberts.**

**Do. Liverpool Dist., R. W. Lowden.**

**Constable of Lancaster Castle, Sir J. Travis Travis-Clegg.**

### THE COUNTY PALATINE OF DURHAM.

It is uncertain when "Palatine" privileges were first exercised in the County of Durham, as no formal creation of the Palatinate by charter or deed appears to have ever been made. From the founding of the See of Lindisfarne, out of which the bishopric and palatinate

of Durham arose, the Bishops received large grants of lands, with extensive immunities; and Guthred, king of Northumbria, and Alfred the Great appear to have confirmed the grant to the See of the whole of the land between the rivers Tyne and Wear. There is no evidence of the exercise of *palatine* privileges by the Bishops prior to the Norman Conquest, but it is probable that these were acquired in the reign of the Conqueror, and they were exercised by the Prelates until resumed by the Crown in 1836. Palatine counties are understood to have been erected for the defence of neighbouring kingdoms against the Welsh and Scots, and were in reality self-contained kingdoms in alliance with their creator. The ancient customs of the County Palatine of Durham are in some measure retained, the administrative authority being exercised on behalf of the Crown.

Chancellor, C. Paley Scott, &c.  
Attorney-General, Herbert F. Manisty, &c.  
Solicitor-General, J. W. Jardine, &c.  
Registrar of Chancery Court, A. O. Smith.  
Steward & Clerk of Halmat, S. S. Brister.  
Deputy Steward, W. T. T. Channell.  
Registrar of the Halmat, G. M. Sladden.  
Mining Surveyor, Sir A. N. Lindsay Wood, Bt.  
Messrs. Smiths, Gore & Co.

### ECCLIESIASTICAL AND CHURCH ESTATES COMMISSIONERS,

1 Millbank, Westminster, S.W. 1.  
(Hours 10 to 5.)

The Ecclesiastical Commission for the Management of Church Property, as now existing, was incorporated in 1836, its constitution being amended in 1840-1 and 1868. The main function of the Commission (whose members are given below) is the management of the Estates of the Church in order to endow or augment benefices, &c.

### BOARD OF EDUCATION,

Whitehall, London, S.W. 1.

The Government Department of Education was, until the establishment of a separate office, a Committee of the Privy Council appointed in 1839 to supervise the distribution of certain grants which had been made by Parliament since 1834. The Act of 1839 established the Board of Education, with a President and Parliamentary Secretary, and created a Consultative Committee. The cost of administration was estimated at £31,543 in the Financial Year 1936, with £335,095 for Inspection and Examination.

*B. Thompson.*

### CENTRAL ELECTRICITY BOARD.

(Established under the Electricity (Supply)

Act, 1926.)

*Office, Trafalgar Bldgs., 1 Charing Cross, S.W. 1.*

The Board are charged with the duty of controlling the production of electricity and supplying authorised undertakers in Great Britain. Their main functions are to construct main transmission lines (commonly known as "The Grid") to concentrate generation at standard frequency in the most efficient stations ("Selected Stations") to control the operation of the stations, and to supply electricity in bulk for distribution. The "Grid" scheme embraces the whole of Great Britain, except the north of Scotland. The borrowing powers of the Board are £60,000,000, and issues of stock have been made, viz.: £3,000,000 (4%) in May, 1929, £7,000,000 (5%) in January, 1930, £6,000,000 (4½%) in Nov., 1930, £3,000,000 (5%) in Oct. and Nov., 1931, £7,000,000 (5½%) Feb., 1932, £10,000,000 (4½%) in June, 1932, £4,000,000 (3½%) in June, 1933, £6,000,000 (3½%) in Oct., 1934, and £3,500,000 (3½%) in Feb., 1936. The Board publish Annual Reports and Statements of Accounts.

*Chairman, Sir Archibald Page.*

*Other Members, Sir Andrew R. Duncan; Frank Hodges;*

*R. P. Sloan, c.b.e.; W. Walker; Sir Duncan Watson;*

*Sir R. L. Wedgwood, c.b., c.v.g.; W. K. Whigham.*

*General Manager, Harold Hobson.*

*Chief Engineer, Johnstone Wright.*

*Commercial Manager, J. W. Beauchamp.*

*Chief Accountant, D. W. Coates, c.b.e.*

*Secretary and Solicitor, Richard H. Fox.*

### EMIGRANTS' INFORMATION OFFICE

(See Oversea Settlement Department, p. 324.)

### EXCHEQUER AND AUDIT DEPARTMENT,

Victoria Embankment, E.C. 4.

This is the Department of the Comptroller and Auditor General, an office created by the Act 29 & 30 Vict. c. 39 (1866) to replace, with extended powers, the separate offices of Comptroller General of the Receipt and Issue of

the Exchequer and of the Commissioners for Auditing the Public Accounts. This officer is appointed by Letters Patent under the Great Seal, and is irremovable except upon an address from the Two Houses of Parliament. In his capacity of Comptroller General of the Receipt and Issue of the Exchequer he authorises all issues from the Exchequer after satisfying himself that Parliament has given authority for them. He examines the Exchequer accounts and makes an annual report on them to Parliament. In his capacity of Auditor General of Public Accounts he is charged with the duty of examining on behalf of the House of Commons the accounts of expenditure out of monies provided by Parliament, the accounts of the receipt of revenue, and generally all other public accounts, including the accounts of Government stores and of trading services conducted by Government Departments. The results of his examination of those accounts are reported to the House of Commons.

*Comptroller and Auditor General, Sir Gilbert C.*

*R. H. W. Case; J. C. Stuart; C. W. Evans; E. W.*

*Cave; R. G. McDonald; F. W. Gladwin; C. G.*

*Stephens; C. E. I. Jones; W. C. G. Cribbet; C. G.*

*White; I. Wild; A. E. Feaveyear.* ..... £680 to £847

There are also 147 Auditors ..... £337 to £634

### EXPORT CREDITS GUARANTEE DEPARTMENT.

9 Clements Lane, E.C. 4. (Mansion House 8771.)

*BRANCH OFFICES: Manchester—Midland Bank*

*Buildings, 56 Spring Gardens, (Blackfriars*

*9866-7). Bradford—69 Market Street (8912.)*

*Birmingham—Phoenix Chambers, 84 Col-*

*more Row (Central 1381). Glasgow—7 West*

*George Street, C. 2 (Central 3056).*

The Overseas Trade Acts, 1920-1934, empower the

Board of Trade to give guarantees in connection with

the export of British goods. These powers are adminis-

tered by the Export Credits Guarantee Department

acting in consultation with a statutory Advisory Com-

mittee set up for the purpose. The Minister in charge

of the Department is the Secretary of the Department

of Overseas Trade, who in April, 1930, appointed an

Executive Committee to control the daily conduct of

the business.

### Statutory Advisory Committee.

**Insp. of Fish Distribution, Comm. L. D. Fisher, D.S.O., R.N. (ret.).**

**Marine Supt., Capt. C. H. Champness, R.N. (ret.).**

**Engineer Supt., G. P. Finlay.**

### FOREIGN OFFICE, Downing Street, S.W. 1.

The Secretaryship of State for Foreign Affairs was created in 1782, superseding the ancient Secretary for the Northern Department of Europe (as the Office had been called since 1688). He is assisted by three Under-Secretaries (two Parliamentary, the other Permanent), two Deputy Under-Secretaries, and five Assistant Under-Secretaries, Legal Advisers, thirteen Counsellors, a Librarian, and a staff of Clerks. The chief functions, in addition to the formal duties, are receiving and answering communications from individuals or other Government Departments, from Diplomatic and Consular Agents of this country or others, and in determining the policy of the country towards Foreign Powers. The administrative expenses of the Foreign Office were estimated at £179,736 in 1936.

*Secretary*, E. C. Mofrey.

**GENERAL REGISTER OFFICE**(ENGLAND AND WALES),  
Somerset House, W.C.2.

The Registration of Births, Marriages, and Deaths is believed to have been inaugurated by Thomas Cromwell in 1522, but the Statutes concerning registration are of a comparatively modern date, and were consolidated by 37 & 38 Vict. c. 88. The first Registrar-General was appointed in 1836. The work of the Registrar-General was enormously increased by the Act of 1874, which made registration compulsory in England and Wales, and also by the Births and Deaths Registration Act, 1926, the Legitimacy Act, 1926, and the Adoption of Children Act, 1926. The Registrar-General is responsible for the taking of the Census and the preparation of the Census Returns. He also undertakes the verification of claims by applicants for Old Age, Widows, &c., and War Pensions. The expenses of the Office including the cost of the Census Office for 1936-37 were estimated at £122,168. The

estimate of Office receipts from fees for the same period is £24,500.

**Quarterly Statistics.**—In the Register-General's report for the June Quarter, 1936, the birth rate is given as 15.6 per 1,000 population. The death rate was 12.8 per 1,000, this being 0.2 per 1,000 below the rate recorded during the second quarter of last year. The natural increase of population for the June Quarter, 1936, by excess of births over deaths, was 38,143 as against 45,455, 37,006 and 33,957 in the second quarters of 1933, 1934 and 1935 respectively. The number of persons married in the June Quarter of 1936 was 200,538, an increase of 4,626 as compared with the number in the corresponding quarter for 1935. The number corresponds to an annual rate of 19.8 per 1,000 of the estimated population for 1935.

**Registrar-General, S. P. Vivian, C.B.E.,** £1,450 to £1,650 (See Ministry of Health)

**HISTORICAL MANUSCRIPTS COMMISSION.**

Public Record Office, Chancery Lane, W.C. 2.

Tel. Holborn 0747, extension 9.

The Historical Manuscripts Commission is empowered (by the original commission issued in 1869 and renewed in 1919) to make inquiry into the place of deposit of collections of manuscripts and papers of general public interest and with the consent of their owners to publish their contents. Over 180 vols. of reports have been issued.

Chairman, The Master of the Rolls.

Commissioners, The Duke of Rutland; The Earl of Crawford and Balcarres, K.T.; The Earl of Ancaster, T.D.; The Viscount Handworth, K.B.E.; The Viscount Cranborne, M.P.; The Viscount Sandon; Sir Henry C. Maxwell-Lyte, K.C.B.; Sir Frederick Kenyon, K.C.B.; Prof. A. F. Pollard; R. A. Roberts; A. E. Stamp, O.B.; Prof. H. W. V. Temperley, O.B.E.; D. A. Chart, I.S.O.

Secretary, S. C. Ratcliff, I.S.O.

**HOME OFFICE, Whitehall, S.W. 1.**

The Secretaryship of State for Home Affairs was created in 1782, the duties having previously been assigned to the "Southern" Secretaryship, which embraced the affairs of Great Britain, Ireland, and the Colonies, and also Southern Europe. By the appointment of the "Home" and "Foreign" Secretaries the duties were divided in accordance with the names of the Offices, the former retaining Irish and Colonial business, and until 1794 War business also. In 1801 the Colonial business was also removed. The Home Secretary is the medium by which the Sovereign acquaints his people of his pleasure, and a channel of communication with the Sovereign, and his main functions are the maintenance of the King's peace, the enforcement of rules made for the internal well-being of the community, and the exercise of the prerogative of mercy.

Principal Secretary of State for Home Affairs, Rt.

Hon. Sir John Simon G.C.S.I., K.C.V.O., O.B.E., K.C.,

£515 to £738

### POLITICAL HONOURS SCRUTINY COMMITTEE

Treasury Chambers, S.W. 1.

The Royal Commission on Honours, 1923, recommended  
that a Committee should be appointed to consider  
before they are submitted to the King the names and  
particulars of persons recommended for appointment  
to any dignity or honour on account of political ser-  
vices, and after such inquiry as they think fit to report  
to the Prime Minister whether, so far as they believe,  
such persons in the whole circumstances are fit and  
proper persons to be recommended.

*Chairman,* The Lord Macmillan.  
*Other Members,* Rt. Hon. G. N. Barnes, C.B.; The  
Marquess of Crewe, K.G.

*Secretary,* Sir James Rae, K.B.E.

### IMPERIAL COMMUNICATIONS ADVISORY COMMITTEE.

Electra House, Victoria Embankment, W.C. 2.

This Committee was constituted in July, 1929, to  
act in an advisory capacity in regard to telegraphic  
communications.

*Chairman,* Sir Campbell Stuart, K.B.E.

*Deputy Chairman,* Clive L. Bailton, C.M.G., O.B.E.

*Secretary,* E. St. J. Bamford, C.M.G.

### IMPERIAL ECONOMIC COMMITTEE, 2 Queen Anne's Gate Buildings, S.W. 1.

This Committee was established in 1925. The func-  
tions of the Committee were extended by the Imperial  
Conferences of 1926 and 1930, and again as a result of  
the Report of the Imperial Committee on Economic  
Consultation and Co-operation, 1932.

The nineteen members of the Imperial Economic  
Committee are nominated by their respective Govern-  
ments, and the Committee, whose expenses are met by  
contributions from all the Governments of the Com-  
monwealth, reports to those Governments.

29 Special Reports and 4 Surveys have been published.  
Summary reviews of production and trade are now  
published annually on Fruit, Meat, Dairy Produce,  
Grain Crops, Industrial Fibres, Oils and Vegetable  
Oils, and Plantation Crops. The Intelligence Services  
include regular periodicals (with annual supplements)  
on Dairy Produce, Fresh Fruit, Dried and Canned  
Fruit, and Wool. Lists and rates on application to the  
Secretary.

*Chairman,* F. L. McDougall, C.M.G.

*Secretary,* Sir David Chadwick, C.S.I., C.I.E.

*Asst. Sec.,* Sir Alan Green, C.I.E.

### IMPERIAL SHIPPING COMMITTEE,

Great George Street, S.W. 1.

Set up in 1920: (i.) To enquire into complaints from  
persons and bodies interested with regard to ocean  
freights, facilities and conditions in the inter-imperial  
trade or questions of a similar nature referred to them  
by way of the nominating authorities; and to report their  
conclusions to the Governments concerned. (ii.) To sur-  
vey the facilities for maritime transport on such routes  
as appear to them to be necessary for trade within the  
Empire, and to make recommendations to the proper  
authority for the co-ordination and improvement of  
such facilities with regard to the type, size and speed  
of ships, depth of water in docks and channels, con-  
struction of harbour works and similar matters; and in  
so doing to take into account facilities for air transport  
on the routes in question. Like the Imperial Economic  
Committee, it derives authority from and reports to all  
the Governments represented at the Imperial Conference.  
*Chairman,* Rt. Hon. Sir Halford Mackinder.  
*Secretary,* D. Carter.

### IMPORT DUTIES ADVISORY COMMITTEE.

Shell-Mex House, Strand, W.C. 2.

(Appointed under the Import Duties Act, 1932.)

*Chairman,* The Lord May, K.B.E.

### INDIA OFFICE, Whitehall, S.W. 1.

Prior to 1858 Indian affairs were conducted by the  
East India Company, under the supervision of a Govern-  
ment Board of Control, whose President was responsible  
for Indian affairs in Parliament. On the transfer of  
India to the Crown in 1858 a Secretary of State, assisted  
by a Council, was entrusted with the administrative  
duties formerly discharged by the Company and Board.

*Secretary of State,* The Most Hon. the Marquess of  
Zetland, P.C., C.S.I., C.B.E. £5,000

*Private Secretary,* W. D. Croft, C.I.E. £1,150 to £1,450  
*Assistant Private Secretary,* Viscount Hood

(all India) £175

*Political A.D.C.,* Lt.-Col. W. G. Neale, C.I.E. £961

## BOARD OF INLAND REVENUE.

Somerset House, W.C. 2.

The appointment of Commissioners of Stamps dates from 1824 and of Commissioners of Taxes from 1712. By 4 and 5 Will. IV. c. 60, a consolidated Board of Stamps and Taxes was established, and by 12 and 13 Vict. c. 1 this Board was amalgamated with the Commissioners of Excise to form the Board of Inland Revenue. By 8 Edw. VII. c. 26 the administration of Excise was transferred to the Board of Customs. The present sources of "Inland Revenue" consist of Death Duties, Stamps and Taxes. Salaries and Expenses of the Board for 1936 are estimated at £7,64,703.

Secretary, C. F. Bickardike. £905 to £1,011

## Industrial Court.

5 Old Palace Yard, S.W. 1.

President, Sir H. S. Morris, M.B.E., K.C.

£4,000 to £4,500

Secretary, W. H. Reynolds, M.B.E. £905 to £1,011

## H.M. LAND REGISTRY.

Lincoln's Inn Fields, W.C. 2; and 18 Portland

Street, W.C. 2.

H.M. Land Registry was established in pursuance of a

recommendation of a Royal Commission by the Land

Registry Act 1925. The aim of the Act was to render

dealings with land more simple and economical by estab-

lishing a State register of landowners who voluntarily submitted the titles to their land for examination and approval by the Registrar on behalf of the State. The Registry was reformed by the Land Transfer Act 1895, which, while making many changes in the system, continued its voluntary basis. In 1897 the Land Transfer Act introduced the principle of compulsory registration, and four Orders in Council under that Act between 1898 and 1902 made the system compulsory on sale in the administrative counties of London. By a further Order made in 1905 Registration was made compulsory on sale in Eastbourne, and under an order made in 1908 in Hastings. The Land Registration Act 1925 consolidated the previous Acts, and made such changes in the system as the experience of a generation had shown to be necessary. The essence of the system is, that the machinery for the purchase and sale of land is assimilated to that for Stocks and Shares. Absolute titles granted by the Land Registry are guaranteed by the State. Simple forms, analogous to those used on transfers of Stocks and Shares, are provided. The cost of buying, selling or mortgaging registered land is much less than the cost in the case of unregistered land. It is open to any County Council or Council of a County Borough to apply to the Privy Council for an order making registration of title compulsory in its area. The Land Registry is administered under the Lord Chancellor by the Chief Land Registrar, who also controls the Middlesex Deeds Registry and the Land Charges Department under the Land Charges Act 1925.

**Office Hours.**—Registration, 12 to 3; Searching and other business, 10 to 4. SATURDAYS closed at 2.

#### Registration of Title.

**Chief Land Registrar,** Sir John Stewart Stewart-Wallace, C.B., £2,000  
**Registrars,** C. A. J. Lewis, C.B., £1,350 to £1,650;  
 S. Lowenthal; R. P. Purcell; C. C. Deans

£1,200 to £1,400  
**Asst. Registrars,** J. M. Lowe; W. J. L. Ambrose;  
 N. Sutcliffe; E. L. Follett; J. S. R. D. Rawcliffe

£850 to £1,100  
**Legal Assistants,** H. W. Wilson; A. R. Clarke-Williams;  
 T. M. Roberts; G. H. Curtis; A. H. Flint; Miss

E. M. Price £650 to £850  
**Junior Legal Assistants,** E. H. Collins; A. M. H.  
 Hillis; W. E. B. Pryor; T. B. F. Ruffo; H. G. Gil-

bertson; R. S. Hood; R. E. S. Willison; E. D.  
 Wotton; T. I. Casswell; D. Johnston; F. L. Harris;  
 K. H. Chapman; E. L. Thakray; S. L. Whiteley

£425 to £625; Miss E. H. Kirby-Gomes; Miss K.  
 Rushworth £325 to £525  
**Examiners,** W. E. Monday, £799; S. W. Dowden,

M.B.E., £634 to £738  
**Junior Examiners,** W. L. Robinson; E. O. Byers,  
 M.B.E.; W. Simonds; F. C. J. Howard £525 to £634

**Superintendent, Middlesex Deeds and Land Charges**  
 Dept., F. W. Mott, M.B.E., £525 to £680  
**Chief Superintendent (Mapping Branch),** E. A. Mulby,

**Deputy Chief Superintendent,** C. J. Sweeney, P.A.S.I.,

£500 to £700  
**Superintendents,** G. H. Ricks; G. Mitchell; R. W.  
 Pyno, P.A.S.I., £500 to £600

**Chief Assistant (Establishment) & Clerk of Accounts,**  
 A. H. Coates, M.B.E., £850  
**Staff Clerks,** W. F. Hartmann; E. C. S. DeVal; H. A.

Coslin; A. J. Sullivan; D. McFarlane; W. H.  
 Godfrey; K. F. Smith; W. J. Walling; A. E.  
 Timney £525 to £634

#### LAW OFFICERS' DEPARTMENT.

Royal Courts of Justice, W.C. 2.

**Attorney-General,** Sir Donald Bradley Somervell,  
 O.B.E., K.C., M.P. (and fees) £17,570 in 1929-30 £4,500  
**Solicitor-General,** Sir Terence James O'Connor, K.C.,

M.P., (and fees) £6,772 in 1929-30 £4,000  
**Legal Secretary,** Robert A. Swain, O.B.E., £1,011 to £1,162

#### LORD ADVOCATE'S DEPARTMENT.

Edinburgh.

**Lord Advocate,** Rt. Hon. Thomas Mackay Cooper,  
 K.C., M.P., £5,000  
**Solicitor-General,** J. S. C. Read, K.C., £2,000

**Legal Secretary and Parliamentary Draftsman,**  
 M. Miller Craig, Adv., £1,300 to £1,650  
**Asst. Legal Sec. and Party Draftsman,** A. L.

Innes, Adv., £738 to £953

#### LEE CONSERVANCY BOARD.

Brettenham House, Lancaster Place,  
 Strand, W.C. 2.

The authority responsible for the control of the River Lee and its tributaries, including the management of the Lee and Stort Navigations and the prevention of pollution of the water. The River Lee and its tributaries extend over an area of about 600 sq. miles, and the total length of navigable waterway is about 50 miles. The Board consists of 15 members, of whom 12 are elected by local authorities and one by the large owners on the river.

#### Lee Conservancy Catchment Board.

The Lee Conservancy Catchment Board, established by the Land Drainage Act 1930, consists of the members for the time being of the Lee Conservancy Board together with 6 additional members, 2 appointed by the Minister of Agriculture and Fisheries, and 5 by County Councils in the catchment area.

**Chairman,** Maj. Sir W. Prescott, C.B.E., D.S., M.Inst.C.E.  
**Clerk of the Board and General Manager,** S. R. Hobbay  
 (Barrister-at-Law).

**Engineer,** B. Howarth, M.Inst.C.E.

#### LONDON PASSENGER TRANSPORT BOARD.

55 Broadway, Westminster, S.W. 2.

Telephone—VICTORIA 6800.

The following undertakings were transferred to the Board, constituted under the London Passenger Transport Act, 1933:—

**Railways**—Metropolitan District, London Electric, City and South London, Central London, Metropolitan, Tramways, L.C.C., Barking, Bexley, Croydon, Dartford, East Ham, Erith, Ilford, Leyton, Walthamstow, West Ham, London United, Metropolitan Electric, South Metropolitan Electric, &c.

**Buses and Coaches**—London General, London General Country Services, Overground, Thos. Tilling (London Undertaking), Tilings and British Automobile Traction, Green Line Coaches, &c.

**Chairman,** The Lord Ashfield £12,500  
**Vice-Chairman,** Frank Pick £10,000

**Other Members,** John Cliff; Patrick Ashley Cooper, M.A., M.B.E.; Sir Edward J. Holland, D.S., J.P.; Charles Latham, F.R.S.A., J.P.; Brig.-Gen. Sir Henry P. Maybury, O.B.E., K.C.M.G., D.S., M.Inst.C.E., P.A.S.I. £750

**Secretary and Treasurer,** J. S. Anderson.

**Controller and Accountant,** C. S. Louch.

**General Manager (Railways),** J. P. Thojnas.

**General Manager (Road Transport),** T. E. Thomas.

**Operating Manager (Central Buses),** H. S. F. Lansdown.

**Operating Manager (Trams & Trolley Buses),** S. R. Goary.

**General Manager (Country Buses),** A. H. Hawkins.

**Chief Engineer (Buses & Coaches),** A. A. M. Durrant.

**Chief Engineer,** A. R. Cooper.

**Commercial Manager,** A. L. Barber.

**Chief Stores Superintendent,** H. H. Pitts.

**Chief Staff Officer,** J. L. B. Lindsay.

**Chief Electrical Engineer,** J. H. Millon.

**Public Relations Officer,** E. Rawdon Smith.

**Publicity Officer,** C. Barnham.

**Commercial Advertising Officers,** H. L. Spratt; W. Gott.

**Parliamentary Officer,** C. G. Page.

#### LORD GREAT CHAMBERLAIN'S OFFICE.

Royal Court, House of Lords, S.W. 1.

The Lord Great Chamberlain is the Sixth Great Officer of State, the office being hereditary since the grant of Henry I. to the family of De Vere, Earls of Oxford.

**Lord Great Chamberlain,** The Marquess of Cholmondeley.

**Secretary,** Brig.-Gen. Lord Marné Gordon Lennox, C.M.G., D.S.O., M.V.O., £277

**Clerk,** Capt. G. J. W. Townsend, M.B.E., £150  
**Resident Supt. House of Lords,** Capt. E. L. H. Elliott, £396

#### LORD PRIVY SEAL.

Treasury Chambers, Whitehall, S.W. 1.

**Lord Privy Seal,** The Viscount Halifax, K.G., G.C.S.I., G.C.I.F., T.D., £2,000

**Private Sec.,** C. A. C. J. Hendriks, M.C.

**Parliamentary do.,** The Marquess of Dufferin & Ava, unop.

**MEDICAL RESEARCH COUNCIL.**

*Central Offices*:—38 Old Queen Street, Westminster, S.W. 1.

*Telephone*: Whitehall 5027.

*Telegrams*: "Medresco, Parl-London."

The Council were formerly the Medical Research Committee, established in 1913 under the National Health Insurance Act, but were incorporated under their present title by Royal Charter on the 1st April, 1920. They are now under the administrative direction of a Committee of the Privy Council, consisting of the Lord President, the Minister of Health (England and Wales), and the Secretaries of State for Scotland, for Dominion Affairs, for the Colonies, and for Home Affairs; the Secretary of the Medical Research Council is *ex officio* Secretary to this Committee.

The Council apply moneys voted by Parliament or received from private sources for the furtherance of medical research. Their reports, published by H.M. Stationery Office, are obtainable through any bookseller.

*Members*: The Lord Balfour of Burleigh (*Chairman*); The Lord Milnray (*Treasurer*); R. K. Law, M.P.; Sir T. Lewis, M.D., F.R.S.; Prof. Sir D. F. D. Wilkie, C.M., F.R.C.S.; Prof. A. J. Clark, M.D., F.R.S.; Prof. J. C. G. Ledingham, C.M.O., D.Sc., F.R.S.; Prof. H. S. Raper, C.M.E., D.Sc., F.R.S.; Prof. J. A. Ryle, M.D., F.R.C.P.; Prof. M. J. Stewart, M.B., F.R.C.P.; Prof. J. Mellanby, M.D., F.R.S.

*Secretary*, Edward Mellanby, M.D., D.Sc., F.R.S.

*Principal Assistant Secretary*, A. Landsborough Thomson, C.B., O.B.E., D.Sc.

*Administrative Officers*, E. Schuster, D.Sc. (*Asst. Sec., Publications*); F. H. K. Green, M.D., M.R.C.P.; D. V. T. Fairlie, B.A., A.C.A. (*Finance Officer*).

**National Institute for Medical Research.**

Mount Vernon, Hampstead, N.W. 3.

*Telephone*: Hampstead 2232.

*Telegrams*: "Natimmed, Haver-London."

*Director*, Sir Henry H. Dale, C.B.E., M.D., F.R.S.

*Deputy Director*, Sir Patrick P. Laidlaw, B.Sc., F.R.S.

**National Collection of Type Cultures.**

Lister Institute, Chelsea Gardens, S.W. 1.

*Telephone*: Sloane 2181.

*Curator*: R. St. John-Brooks, M.D.

**Standards Laboratory.**

Institute of Pathology, University of Oxford.

*Telephone*: Oxford 2737.

*Curator*: A. D. Gardner, M.D., F.R.C.S.

**Clinical Research Units.**

The following are maintained jointly by the Medical Research Council and the institutions within which they are placed:—

*Department of Clinical Research*, University College

Hospital Medical School, London, W.C.1. *Director*,

Sir Thomas Lewis, C.B.E., M.D., F.R.C.P., F.R.S.

*Clinical Research Unit*, Guy's Hospital Medical School,

London, S.E.1. *Director*, R. T. Grant, M.D., F.R.S.

*Neurological Research Unit*, National Hospital for

Nervous Diseases, Queen Square, W.C.1. *Director*,

E. A. Carmichael, M.B., F.R.C.P.

**Industrial Health Research Board.**

*Office*: 38 Old Queen Street, Westminster, S.W. 1.

*Telephone*: Whitehall 5027.

*Secretary*: Air Vice-Marshal Sir David Munro, K.C.B., M.B.

**Tropical Medical Research Committee.**

*Office*: 38 Old Queen Street, Westminster, S.W. 1.

*Secretary*: A. L. Thomson, C.B., O.B.E., D.Sc.

**MERSEY DOCKS AND HARBOUR BOARD.**

Liverpool.

*Nominee Members (appointed by the Minister of*

*Transport)*, Robert S. Johnson, O.B.E.; Charles

McVey; James L. Ferguson; T. Stone.

*Elected Members (elected by Dock Electors)*, Sir Richard

D. Holt, Bt., LL.D. (*Chairman*); J. G. B. Beazley,

M.C., T.D.; A. H. Bibby, B.Sc.; William B. Bibby;

Charles Booth; Sir Thomas A. L. Brocklebank, Bt.;

E. G. Brownbill; Lt.-Col. Albert Buckley, D.S.O.;

William M. Clarke; Sir Robert L. Connell, K.C.B.;

R. M. Easton; Edmund Gardner; Robert L. Holt;

Maurice H. Hulme; Leonard D. Ireland; D. R.

Jones; A. C. Morrell, O.B.E., M.C.; Edward B. Orme; Alina Parkin; Thomas Rowe; Hugh L. Roxburgh; J. A. Shone; Frederick H. Southern; H. Sutton Timmins.

*General Manager and Secretary*, Sir Lionel Ashton Piers Warner, C.B.E.

**THE METEOROLOGICAL OFFICE.**

Exhibition Road, South Kensington, S.W. 7.

The control is vested in a Director and Committee appointed by the Air Council. The *Gassiol Committee* of the Royal Society is an Advisory Committee for geophysical subjects. The work of the Office includes:—The collection and discussion of meteorological observations from oceans and land areas all over the world; the maintenance of a number of stations for daily telegraphic reports upon which gale warnings and forecasts are based; the maintenance of observatories for the study of weather, with which are associated other geophysical subjects; and the maintenance of stations in various parts of this country, the Mediterranean and the Near East, for the supply of meteorological information and other requirements of aircraft. The responsibility for the work of the *British Rainfall Organization* was transferred to the Meteorological Office in July, 1919.

*Chairman of Meteorological Committee*, The Under Secretary of State for Air.

*Director of Meteorological Office*, Sir George C.

Simpson, C.B.E., C.B.E., F.R.S. ... £1,360 to £1,950

*Assistant Directors*, R. G. K. Lempfert, C.B.E., M.A.,

F.R.S.P.; Lt.-Col. E. Gold, D.S.O., F.R.S.; F. J. W.

Whipple, M.A., Sc.D., F.R.S.P.

*Superintendents*, E. G. Biham, B.Sc., A.R.C.S., D.I.C.,

(*British Climatology and British Rainfall Or-*

*ganization*); Capt. L. A. Brooke Smith, M.D., M.R.C.

(*Marine*); C. E. P. Brooks, D.Sc. (*General*

*Climatology*); R. Corless, O.B.E., M.A. (*Forecast*

*and Aviation*); J. S. Dines, M.A. (*Army and*

*Instruments*); F. Entwistle, B.Sc. (*Overseas*);

Capt. L. G. Garbett, R.N. (*Naval*); A. H.

R. Goldie, D.Sc., F.R.S.E. (*Scotland*).

*Chief Clerk*, H. L. B. Tarrant, M.B.E.

**Superintendents of Observatories.**

*Central (Rev.)*, F. J. W. Whipple, M.A., Sc.D., F.R.S.P.

*Magnetic (Esksdamub)*, J. Crichton, M.A., B.Sc.;

*U.K.S.E.*

*Western (Valentia, Co. Kerry)*, H. F. Jackson, M.B.E.

**METROPOLITAN WATER BOARD.**

173 Rosebery Avenue, E.C. 1.

The Board serves an area of 573 sq. miles. The charges are levied on net annual value at such rate, not exceeding 84 per cent., as the Board may fix. The net water rental for 1923-24 was £5,269,104. The Capital Debt on March 31, 1926 amounted to £54,953,360, the interest paid being £1,710,262. The estimated population supplied was 7,657,245, the number of services being 2,417,682. The annual supply was 102,340,900,000 gallons (representing 456,900,000 tons), a daily average of 279.63 million gallons. One of the sources of supply is the *New River Company's* undertaking, inaugurated in the reign of James I. (1606) by Sir Hugh Myddelton, to bring water from Amwell and Chadwell, Herts. to London.

*Chairman of the Metropolitan Water Board*, Sir W. Prescott, C.B.E., D.I., J.P., M.Inst.C.E., M.I.Mech.E.

*Vice-Chairman*, R. W. James, J.P., M.Inst.C.E.,

M.I.Mech.E., F.I.C.P.A. ... (unp.)

*Clerk of the Board and Parliamentary Officer*, G. F.

Stringer, O.B.E., F.C.I.S., Barrister-at-Law ... £2,250

*Chief Engineer*, Lt.-Col. J. R. Davidson, C.M.O., M.Sc.,

M.I.Mech.E. ... £5,000

*Treasurer and Comptroller*, A. V. Huson, A.S.A.A.,

F.I.M.T.A. ... £1,600

*Director of Water Examination*, Lt.-Col. C. H. H.

Harold, O.B.E., M.D., Ch.B., D.P.H. ... £2,000

*Solicitor*, H. A. D. Collins ... £1,500

*Surveyor*, Harold Oxley, F.S.I. ... £1,500

**THE ROYAL MINT, Tower Hill, E.C. 3.**

Admission by order only, application for which should be made to the Deputy Master of the Mint, about 4 weeks in advance of intended visit. Hours of admission, 10 to 3 Mon. to Fri. (Public Holidays excepted).

The Royal Mint, as now constituted, may be said to date from 1817, and the buildings from 1810, the latter

being completed in that year at the cost of over £250,000. The first known Master (or Warden) of the Mint dates from Henry I. and the last Warden was Lord Maryborough (1814-23), the last Master being Professor Thomas Graham, who died in 1889. In 1870 the Coinage Act abolished the ancient post of Master of the Mint as such, and combined it with that of the Chancellor of the Exchequer. The estimated administrative expenses amount to £2,727,000 for 1936-1937. Appropriations in aid, £2,617,000, leaving a net cost of £100,000.

*Master and Worker.* The Chancellor of the Exchequer, *Deputy Master and Comptroller, and Engraver of H.M. Seals*, Col. Sir Robert A. Johnson, K.C.V.O., K.B.E., ..... £1,650  
*Chief Clerk*, W. Perry, M.B.E. .... £900 to £1,000  
*Superintendent, Operative Department*, H. W. L. Evans, C.V.O., O.B.E. .... £1,058 to £1,161  
*Deputy do.*, F. W. Burton ..... £847 to £953  
*Chief Assayer*, S. W. Smith, C.B.E., D.S.O. .... £847 to £1,058  
*Curator and Librarian*, C. F. Barrett ..... £634 to £738

#### Branches of the Royal Mint.

*Melbourne, Victoria.*  
*Deputy Master*, C. T. Chucas ..... £1,100  
*Perth, Western Australia.*  
*Deputy Master*, H. B. Gritton ..... £1,100  
*Pretoria, South Africa.*  
*Deputy Master*, R. G. J. Pearson ..... £1,200  
*Superintendent*, J. T. Becklake ..... £820 to £940

### STANDING COMMITTEE ON MUSEUMS AND GALLERIES.

22A Queen Anne's Gate, S.W. 1.

Appointed Feb. 11, 1913. The functions of the Committee are:—(1) To advise generally on questions relevant to the most effective development of the National Institutions as a whole and on any specific questions which may be referred to them from time to time; (2) to promote co-operation between the National Institutions themselves and between the National and Provincial Institutions; (3) to stimulate the generosity and direct the efforts of those who aspire to become public benefactors.

*Chairman*, The Viscount D'Abernon, G.C.B., G.C.M.G., V.R.S.  
*Secretary*, John Beresford, M.A.

### THE BRITISH MUSEUM.

Bloomsbury, W.C. 1.

Open free daily 10 a.m. to 6 p.m.; Sundays 2 p.m. to 6 p.m. *Lecture-tours* on weekdays at 12 noon and 3 p.m. *Reading-room* open daily to readers, from 9 a.m. to 6 p.m., and Newspaper Room (at Colindale), from 10 a.m. to 5 p.m., throughout the year, except Good Friday and Christmas Day, and Sundays. Closed for cleaning the week beginning with first Monday in May. Tickets of admission, for purposes of research and reference which cannot be carried on elsewhere, are granted on written application beforehand to the Director. The applicant must state abode, business or profession and full particulars of purpose, and must send a recommendation from a person of recognised position.

The British Museum may be said to date from 1753, when Parliament granted the sum of £20,000 to purchase the collection of books &c. of Sir Hans Sloane, the building (Montagu House) being opened in 1759. The present buildings were erected between 1823 and 1914, and the original collection has increased to its present dimensions by gifts and purchases, and by the operation of the Copyright Acts. The administrative expenses were estimated at £193,680 in 1936-37, and were met by a vote under "Education, Science, and Art," Class IV. of the Civil Estimates.

#### STANDING COMMITTEE.

*The Three Principal Trustees*, The Archbishop of Canterbury; The Lord High Chancellor; The Speaker of the House of Commons—*ex-officio*; *Appointed by the Sovereign*, The Earl of Harewood, K.G., G.C.V.O., D.S.O., L.D.; *Other Trustees*, H.R.H. the Duke of York, K.G.; Earl of Crawford and

Balcarras, K.T.; Earl of Ilchester, O.B.E.; Lord Rothchild, F.R.S.; Lord Macmillan, L.D.; Lord Wright; Sir William H. Bragg, O.M., K.B.E., D.S.C., F.R.S.; Lt.-Col. Sir D. Prain, C.M.G., C.I.E., F.R.S.; Sir Henry A. Miers, D.S.C., D.D., F.R.S.; Sir C. R. Poers, C.B.E., F.P.S.A., F.R.A.; Prof. G. M. Trevelyan, O.M., C.B.E., F.R.A.S., D.L.; F. Cavendish Bentinck; Prof. G. A. Murray, D.Litt., F.R.A.; J. Stanley Gardiner, F.R.S.; C. H. St. John Hornby

#### OFFICERS.

*Director and Principal Librarian*, Edgar John Forsdyke, M.A., F.S.A. ..... £1,650  
*Sec.*, Arundell J. K. Esdaile, M.A., F.S.A. ..... £1,101 to £1,161  
*Assistant Secretary*, J. H. Witney, M.B.E. .... £850  
*Accountant*, J. R. Hootson ..... £634 to £738

*Superintendent of Reading Room*, A. I. Ellis, M.A.

*Assistant Keepers, First Class*, P. Wilson, M.A.; L. C. Wharton, M.A.; G. D. R. Tucker, M.A.; F. C. W. Hiley, M.A.; A. Forbes Johnson, M.C., B.A.; E. W. O'F. Lynam, B.A., M.R.I.A.; A. G. Macfarlane, M.A.; F. G. Rendall, B.A.; W. A. Smith, M.A.; H. Sellers, M.A., D.I.T.; L. A. Sheppard, M.A.; C. B. Oldman, B.A.; H. A. S. Kelham; Wm. C. Smith; A. G. Crawley; J. C. W. Horne, M.A.; F. C. Francis, M.A.; F. D. Cooper ..... £575 to £953

*Assistant Keepers, Second Class*, R. A. Wilson, M.A.; N. F. Sharp, M.A.; A. H. Chaplin, B.A.; L. W. Hanson, M.A., D.I.T.; B. H. U. L. Townshend, B.A.; R. A. Skelton, B.A.; F. L. Kent, B.A. .... £337 to £515

*Temporary Assistant Cataloguers*, G. L. Clutton, B.A.; A. H. King, B.A.; G. H. Spinney, B.A.; R. W. Ladbrough, M.A.; Nora M. Ritchie, B.A.; R. G. Lyde, B.A.; G. A. F. Scheele, B.A.; Annie E. Gibson, B.A.; C. G. Allen, B.A.; M. C. Charles, B.A.; P. F. Du Sautoy, B.A.; Annie O'Donovan, B.A.; P. Fuller, M.A.; S. J. E. Southgate, B.A.; D. Barrett, B.A.; M. M. Nixon, B.A.; Audrey C. Brodhurst, B.A.; C. F. Beekingham, B.A.; J. L. Wood, B.A.; H. McCullagh, B.A. .... £50 to £600 or £500  
*Clerks, Higher Grade*, E. D. Hart; C. C. Shearrott; J. Davies; W. E. Davis; T. F. Machin; W. C. Griscome ..... £396 to £515

*Keeper of Manuscripts and Egerton Librarian*, H. Idris Bell, C.B., O.B.E., M.A., F.R.A. .... £1,161  
*Deputy Keepers*, R. E. W. Flower, D.I.T., D.I.T., F.R.A.; E. G. Millar, M.A., D.I.T., F.S.A. .... £1,058

*Assistant Keepers, First Class*, G. T. Hale, M.A.; H. J. M. Milne, M.A.; A. J. Collins, B.A.; B. S. Holford, M.A., Ph.D.; H. R. Aldridge, M.A. .... £634 to £953  
*Assistant Keepers, Second Class*, F. Wornald, M.A.; T. C. Skeat, B.A.; Margery L. Hoyle, M.A.; C. E. Wright, M.A. .... £337 to £515

*Clerk, Higher Grade*, P. W. B. Brockwell, £306 to £515  
*Keeper of Oriental Printed Books and MSS.*, Lionel Giles, M.A., D.I.T. .... £1,161

*Deputy Keeper*, A. S. Fulton, M.A. .... £1,058  
*Assistant Keepers, First Class*, J. Leveen, M.A.; J. V. S. Wilkinson, B.A. .... £634 to £953  
*Assistant Keeper, Second Class*, N. C. Sansbury, M.A. .... £37 to £515

*Keeper of Prints and Drawings*, A. M. Hind, O.B.E., M.A., F.S.A. .... £1,161  
*Deputy Keeper*, A. E. Popham, M.A. .... £1,058  
*Assistant Keepers, Second Class*, E. F. C. Murray, B.A.; Elizabeth Senior, B.A. .... £337 to £515

*Clerk, Higher Grade*, H. Hampton ..... £306 to £515  
*Keeper of Egyptian and Assyrian Antiquities*, Sidney Smith, M.A., F.S.A. .... £1,161

*Assistant Keeper, First Class*, C. J. Gadd, M.A., F.S.A. .... £575 to £953  
*Assistant Keepers, Second Class*, A. W. Shorter, M.A.; R. D. Barnett, B.A.; I. E. S. Edwards, B.A. .... £337 to £515

*Keeper of Greek and Roman Antiquities*, F. N. Pryce, M.A., F.S.A. .... £1,161  
*Assistant Keepers, Second Class*, R. P. Hinks, B.A.; C. M. Robertson, B.A. .... £337 to £515

*Keeper of British and Medieval Antiquities*, Reginald A. Smith, B.A., D.I.S.A. .... £1,161

Assistant Keepers, First Class, A. B. Tounochoy, M.A., F.R.A.; T. D. Kondrick, M.A.	£575 to £953
Assistant Keeper, Second Class, C. F. C. Hawkes, M.A., F.R.A.	£337 to £585
Keeper of Oriental Antiquities and of Ethnography, Robert L. Hobson, C.B., B.A.	£1,161
Deputy Keeper (in charge of the Sub-Dept. of Ethnography), T. A. Joyce, O.B.E., M.A.	£1,058
Assistant Keepers, First Class, H. J. Braunholtz, M.A.; W. A. H. King, M.A.	£575 to £953
Asst. Keepers (Second Class), B. Gray, M.A.; R. S. Jenkins, M.A.; A. Digby, B.A.	£337 to £585
Clerk, Higher Grade, A. G. Cook.	£309 to £515
Keeper of Coins & Medals, John Allan, M.A., F.R.A.	£1,161
Assistant Keepers, First Class, Harold Mattingly, M.A. (Deputy Keeper); E. S. G. Robinson, M.A., F.R.A.	£575 to £953
Assistant Keepers, Second Class, J. Walker, M.A.; D. F. Allen, B.A.	£337 to £585
Clerk, Second Division, H. C. Gregory.	£396 to £525
Director of Laboratory, A. MORTIMER	
Assistant Keeper, First Class, H. J. Plenderleith, M.C., B.Sc., Ph.D.	£575 to £953
Solar Messrs. Warren, 5 Bedford Square.	

### THE LONDON MUSEUM.

Lancaster House, St. James's, S.W. 1.

Admission on Tuesdays, Wednesdays and Thursdays, 6d.; other days free. Hours:—April 1 till Oct. 31, 10 a.m. till 6 p.m. (Sundays 2 to 6 p.m.); Nov. 1 to March 31, 10 a.m. to 4 p.m. (Sundays 2 to 4 p.m.).

The London Museum was instituted, on the lines of the *Carnavalet* at Paris, for the conservation of antiquities and other objects associated with the history of London. The Collection was originally housed in Kensington Palace, and was reopened in 1924 at Lancaster House.

Keeper, Secretary and Accounting Officer, Dr. R. E. Mortimer Wheeler, M.C., M.A., F.R.A. £1,058  
Assistant, Miss M. R. Homes, F.S.A. £367

### THE BRITISH MUSEUM OF NATURAL HISTORY.

Cromwell Road, S.W. 7.

Open free on week-days (except Good Friday and Christmas Day) 10 to 6, and on Sundays from 2.30 to 6.

Official Guide-lecturers conduct visitors round some portion of the collections at 11.30 a.m. and at 3 p.m. daily free of charge on weekdays, and at 3 p.m. and 4.30 p.m. on Sundays, and their services are available at other times for special parties (also free of charge) by arrangement with the Director. Students are admitted daily for the special study of the collections, and to make drawings and take photographs of specimens, under special regulations to be obtained from the Director. The Museum issues a large variety of publications, comprising scientific monographs and catalogues, popular guide-books and manuals, instructions for collectors, economic pamphlets, and picture post-cards, both monochrome and in colour.

The Natural History Collections in the British Museum were removed to South Kensington and rearranged there in 1881-85, the new museum being opened to the public in 1881. The collections comprise all branches of natural history. A morphological series in the central hall; a collection of domesticated animals; a series of insects illustrating economic zoology; galleries of mammals, including whales; birds and their nests; fishes; reptiles; insects; shells; corals; sponges, &c.; galleries of fossils of all kinds; a botanical gallery; and an extensive gallery of minerals, rocks, and meteorites, with series of specimens forming introductions to their study. The administrative expenses were estimated at £214,916 in 1936-37.

Director, C. Tate Regan, M.A., D.Sc., F.R.S.

Secretary, T. Wooddise	£1,360 to £1,650
Accountant, R. J. Truman	£800 to £950
Clerks, Higher Grade, C. C. Milan; C. A. Wray (Under Museum)	£631 to £738
Assistant Keeper (Library), A. C. Townsend, M.A.	£396 to £515
Assistant Keeper (Second Class), Miss E. Trowman, B.Sc.	£337 to £563
Guide-Lecturers, Miss M. R. J. Edwards, B.Sc.; Miss M. H. Smith, B.Sc.	£313 to £504
Keeper of Zoology, M. A. C. Hinton, F.R.S.	£1,161
Deputy Keepers, G. C. Robson, M.A.; (and one vacancy)	£1,058

Assistant Keepers (First Class), J. G. Dollman, B.A.; N. B. Kinnear; H. A. Daylis, B.Sc.; A. K. Totton, M.C.; J. R. Norman; C. C. A. Monro, M.A.; H. W. Parker, B.A.; M. Burton, M.Sc.; £605 to £953	
Miss A. B. Hastings, Ph.D.; Miss I. Gordon, B.Sc.	

Assistant Keepers (Second Class), F. C. Fraser, J. D. Macdonald, B.Sc.; D. D. John, M.Sc.; G. I. Crawford, B.A.; T. C. S. Morrison-Scott, B.Sc.; R. J. Whittick, B.Sc.	£337 to £593
--	--------------

Technical Assis., Higher Grade, H. W. Pagind, J. C. Vickery.	£396 to £515
Keeper of Entomology, N. D. Riley	£1,161
Deputy Keepers, G. J. Arrow; K. G. Blair, B.Sc.	£1,058
Assistant Keepers (First Class), F. W. Edwards, B.Sc.; F. Laing, M.A., B.Sc.; W. H. T. Tans; W. E. Chinn, M.A.; H. Scott, B.Sc.	£605 to £953
Assistant Keepers (Second Class), R. B. Benson, M.A.; A. W. McKenny Hughes; J. F. Perkins, B.Sc.; J. Smart, Ph.D.; E. B. Britton, B.Sc.; K. H. Chapman, B.A.; R. Washbourn, B.A.; H. Oldroyd, B.A.	£337 to £563

Technical Assistants (Higher Grade), H. Stringer; R. J. West; A. G. Gabriel	£396 to £515
Keeper of Orology, W. D. Laing, B.Sc., F.R.S.	£1,161
Deputy Keeper, W. N. Edwards, B.A.	£1,058
Assistant Keepers (First Class) I. R. Cox, M.A.; E. I. White, B.Sc.; A. T. Hopwood, B.Sc.; W. E. Swinton, Ph.D.; T. H. Withers	£605 to £953
Assistant Keepers (Second Class), H. D. Thomas, Ph.D.; I. Bairstow, M.A.; K. P. Oakley, B.Sc.	£337 to £593
Technical Assistant (Higher Grade), F. O. Barlow	£396 to £515

Keeper of Mineralogy, G. F. Herbert Smith, M.A., B.Sc.	£1,161
Deputy Keeper, W. Campbell Smith, M.C., T.D., M.A.	£1,058
Assistant Keeper (First Class), F. A. Bannister, M.A.	£605 to £953
Assistant Keepers (Second Class), M. H. Hay, M.A., B.Sc.; G. F. Claringbull, Ph.D.; J. D. H. Wiseman, Ph.D.	£337 to £563
Keeper of Botany, J. Ramsbottom, O.B.E., M.A.	£1,161
Deputy Keeper, A. J. Wilmott, B.A.	£1,058
Assistant Keeper (First Class), A. W. Exell, M.A.; G. Tandy, B.A.; J. E. Dandy, M.A.	£605 to £953
Assistant Keepers (Second Class), G. Taylor, B.Sc.; A. H. G. Alston, B.A.; I. M. Lamb, B.Sc.; W. R. Philipson, B.A.; K. Ross, B.A.	£337 to £563

### THE SCIENCE MUSEUM.

South Kensington, S.W. 7.

Open daily, except Good Friday and Christmas Day, 10 to 6; Sunday, 2.30 to 6. Library (see p. 351) open on weekdays from 10 a.m. to 5.50 p.m., except on Bank Holidays. Admission free.

The Science Museum, which is the National Museum of Science and Industry, was instituted in 1853 under the Science and Art Department as a part of the South Kensington Museum, and opened in 1857; to it was added in 1883 the Collections of the Patent Museum. In 1909 the administration of the Science Collections was separated from that of the Art Collections, which were transferred to the Victoria and Albert Museum. The Collections in the Science Museum illustrate the application of science to industry and the development of scientific and industrial instruments, apparatus and machinery.

The Divisions are: (a) Industrial Engineering; (b) Mechanical Engineering, Land Transport and Construction; (c) Air and Water Transport; (d) Science and Scientific Instruments.

The administrative expenses of the Museum and Library were estimated at £70,289 in 1936-37 and were met by a vote under Education, Science and Art.

*Director and Secretary*, Colonel E. E. B. Mackintosh, D.S.O. ..... £1,360  
*Museum Superintendent*, S. T. Kelly ..... £634 to £738  
*Staff Clerk*, E. J. Schollar ..... £515 to £634

#### Industrial Machinery Division.

*Deputy Keeper*, F. St. A. Hartley, A.C.G.I. ..... £900 to £1,050  
*Assistant Keeper (First Class)*, T. C. Crawhall, M.Sc. ..... £600 to £850  
*Assistant Keepers (Second Class)*, W. T. O'Dea, B.Sc.; G. R. M. Garratt, B.A. ..... £337 to £600

#### Engineering Division.

*Keeper*, E. A. Forward, A.R.C.S., M.I.Mech.E. .... £1,161  
*Assistant Keepers (First Class)*, G. F. Westcott, B.A.; F. G. Skinner, B.Sc. .... £600 to £850  
*Assistant Keeper (Second Class)*, A. Stowers, B.Sc., A.M.I.M.E.C.E. .... £337 to £600

#### Air and Water Transport Division.

*Deputy Keeper*, M. J. B. Davy, A.F.R.A.C.S. .... £900 to £1,050  
*Assistant Keeper (First Class)*, G. S. Laird Clowes, M.A. .... £600 to £850  
*Assistant Keeper (Second Class)*, H. P. Spratt, B.Sc. .... £337 to £600

#### Science Division I.

(Astronomy, Optical Instruments, Mathematics, Chemistry, &c.).

*Deputy Keeper*, E. Lancaster-Jones, B.A. .... £900 to £1,050  
*Assistant Keeper (First Class)*, A. Barclay, A.R.C.S., A.L.S. .... £600 to £850  
*Assistant Keepers (Second Class)*, W. E. Pretty, Ph.D. (also *Secretary to Advisory Council*); H. R. Calvert, D.Phil. .... £337 to £600

#### Science Division II.

(Physics and Geophysics).

*Keeper*, H. Shaw, B.Sc. .... £1,050 to £1,150  
*Assistant Keeper (Second Class)*, F. A. B. Ward, Ph.D. .... £337 to £600

#### Library.

*Keeper*, S. C. Bradford, B.Sc. .... £1,161  
*Assistant Keepers (Second Class)*, H. T. Pledge, B.A.; S. E. Janson, Ph.D. .... £337 to £600

### THE VICTORIA AND ALBERT MUSEUM.

South Kensington, S.W. 7.

Open on weekdays from 10 a.m. to 6 p.m. except Good Friday and Christmas Day. Admission free. Persons desiring the use of the Library must apply for a ticket. The Indian Section, containing collections illustrating the arts and industries of the Indian Empire, is situated in the Imperial Institute Road; open free every day, same hours as above. On Sundays the Indian Section and all other Departments of the Museum, with the exception of the Library and the Circulation Department, are open from 2.30 p.m. till 6 p.m.

The history of the Museum may be said to begin in 1852, when the Museum of Ornamental Art was founded at Marlborough House. The collection consisted of certain objects which had been purchased at the 1851 Exhibition, "on account of the excellence of their art and workmanship," at a cost of £5,300, together with other specimens purchased for the use of the various Schools of Design since 1837, and dispersed among them. Additions have since been made by purchase, gift, and bequest. The Museum contains nine departments, viz.:—Architecture and Sculpture; Ceramics; Engraving, Illustration and Design; Metalwork; Paintings; Woodwork; Textiles; Library (books on art) and Book Production; and the Department of Circulation. The older parts of the building were erected between 1860 and 1882; the new buildings were completed in 1909. The administrative expenses were estimated at £120,550 in 1936-37, and were met by a vote under Education. The branch museum at Bethnal Green (administrative expenses 1936-37, £6,891) was opened in 1872. The buildings were removed from South Kensington, and re-erected on land purchased for the purpose locally.

*Director and Secretary*, Sir Eric Maclagan, C.B.E., F.S.A. .... £1,360 to £1,950

#### SECRETARIAT.

*Museum Superintendent*, J. P. Willcock ..... £634 to £738  
*Staff Clerk*, W. Hancock ..... £515 to £634

#### DEPARTMENT OF ARCHITECTURE AND SCULPTURE.

*Keeper*, R. P. Bedford, F.S.A. .... £1,161  
*Assistant Keeper (First Class)*, Miss M. H. Longhurst, F.S.A. .... £527 to £797  
*Assistant Keeper (Second Class) (vacant)* ..... £337 to £563

#### DEPARTMENT OF CERAMICS.

*Keeper*, B. Rackham, F.S.A. .... £1,161  
*Assistant Keepers (First Class)*, A. L. B. Ashton (*Secretary to the Advisory Council*); W. B. Honey ..... £605 to £953  
*Assistant Keeper (Second Class)*, E. A. Laue ..... £337 to £563

#### DEPARTMENTS OF ENGRAVING, ILLUSTRATION, AND DESIGN, AND OF PAINTINGS.

*Keeper*, B. S. Long ..... £1,161  
*Deputy Keeper*, J. Laver ..... £1,058  
*Assist. Keeper (First Class)*, F. W. Stokes ..... £605 to £953

*Assistant Keepers (Second Class)* M. N. F. Stewart; C. Winter ..... £337 to £563

#### LIBRARY.

*Deputy Keeper*, P. B. James ..... £1,058  
*Assistant Keeper (First Class)*, A. W. Wheen ..... £605 to £953

*Assistant Keepers (Second Class)*, C. H. Gibbs-Smith; Miss M. W. Thomas; J. Wardrop (men) £337 to £563; (woman) £513 to £504

#### DEPARTMENT OF METALWORK.

*Keeper*, A. J. Koop ..... £1,161  
*Deputy Keeper*, Maj. C. T. P. Bailey ..... £1,058  
*Assistant Keepers (First Class)*, C. C. Oman; W. A. Thorpe ..... £605 to £953

#### DEPARTMENT OF TEXTILES.

*Deputy Keeper* C. E. C. Tattersall ..... £1,058  
*Assistant Keeper (First Class)*, Miss M. Clayton ..... £527 to £797

*Assistant Keepers (Second Class)*, G. F. W. Digby; J. L. Nevinson ..... £337 to £563

#### DEPARTMENT OF WOODWORK.

*Assistant Keeper (First Class) (In charge of Dept.)*, H. C. R. Edwards ..... £605 to £953  
*Assistant Keeper (Same Class) (vacant)* ..... £337 to £563

#### INDIAN SECTION.

*Deputy Keeper*, K. de B. Codrington ..... £1,058  
*Assistant Keeper (First Class)*, A. D. H. Smith ..... £605 to £953

*Assistant Keeper (Second Class)*, P. R. T. Wright ..... £337 to £563

#### DEPARTMENT OF CIRCULATION.

*Keeper*, H. A. Kennedy ..... £1,161  
*Assistant Keeper (First Class)*, C. M. Weekley ..... £605 to £953

*Assistant Keeper (Second Class)*, P. C. Flood ..... £337 to £563

#### Bethnal Green Museum.

Bethnal Green, Cambridge Road, E. 2.—Branch of Victoria and Albert Museum. Collections of pictures, furniture, pottery, textiles, British birds; collection of modern Industrial Art; Reference Library of books on Art; section for objects of special interest to children. Free daily (closed Good Friday and Christmas Day); Mon., Th., 10 a.m. to 10 p.m.; Tu., Wed., Fri., Sat., 10 a.m. to 6 p.m. Sundays, from 2.30 to 6 p.m.

*Deputy Keeper*, A. K. Sabin ..... £1,058

### IMPERIAL WAR MUSEUM.

Lambeth Road, S.E. 1.

Open free daily (except Good Friday and Christmas Day), 10 a.m.; Sundays 2 p.m. Closes at 6 p.m. in summer and at dusk in winter.

The Museum was founded by the War Cabinet in March, 1917, and established by Act of Parliament in 1930 as a memorial of the effort and sacrifice made by the men and women of the Empire during the Great War of 1914-1918 and to provide a record and a place for

the study of that period. The collections, to which additions are constantly being made, include Naval and Military trophies and relics, ordnance, small arms and ammunition, ship and other models, paintings, drawings, sculpture and commemorative medals, maps, war currency, and maps; in 1902 the Museum purchased over 250,000 subjects, prints of which may be purchased, air photographs, lantern slides and cinematograph films. There is a reference library containing 6,000 books and pamphlets available for study to the public. The reference sections are not open on Saturday afternoon.

*Curator and Sec., L. R. Bradley, M.A.*

### NATIONAL MARITIME MUSEUM.

Greenwich, S.E. 10.

Open 10 till 4, 5 or 6, according to season. Charge for admission 6d. per person, 3d. children, and 3d. for bona fide parties of twenty or more. Bank Holidays free. The Royal Naval Museum is closed on Fridays and Sundays.

The National Maritime Museum was established by Act of Parliament on July 24, 1934. The buildings are now in course of reconstruction, and the Museum, it is hoped, will be open to the public in 1937. The National Maritime Museum has absorbed the Royal Naval Museum, Greenwich, which will remain open to the public until its transference to the new buildings.

*Director, Prof. Geoffrey Callender, M.A., F.S.A., A.N.A.*

### NATIONAL GALLERY,

Trafalgar Square, W.C. 2.

Open 10-8 Monday, Tuesday and Wednesday; 10-5 Thursday, Friday and Saturday; 2-5 Sunday. Paying days (6d.), Thursday and Friday. Open free other days. Closed on Good Friday, Christmas Eve, and Christmas Day.

The National Gallery is the result of a Parliamentary grant of £50,000 in 1824 for the purchase and Exhibition of the Angerstein collection of pictures, the present building being opened in 1838 and enlarged in 1876, 1887, 1911, 1923 and 1930. The cost of administration of the National Galleries (Trafalgar Square and Millbank) in 1935-36 was estimated at £28,985.

*Director, Kenneth M. Clark ..... £1,360 to £1,650*  
*Keeper and Secretary, H. I. Kay ..... £1,058*  
*Assistants, M. Davies; P. M. R. Pouncey; Neil MacLaren ..... £337 to £738*  
*Scientific Adviser to the Trustees and Supervisor of Publications, F. I. G. Rawlinson ..... £600*  
*Higher Clerical Officer, L. A. Parsons £396 to £515*  
*Junior Assistant, R. T. Blackwood ..... £250 to £450*

### NATIONAL PORTRAIT GALLERY.

St. Martin's Place, Charing Cross, W.C. 2.

Open free on Monday, Tuesday, Wednesday 10 to 4, 5 or 6 according to season; Saturday 10 to 6 and Sunday 2.30 to 6. Admission 6d. on Thursday and Friday (Students' Days) 10 to 4 or 5.

The first grant to the institution was made in 1856; the collections being successively housed in Great George Street, Westminster, in South Kensington, and in Bethnal Green. The present building was opened in 1875, £30,000 being contributed to its cost by Mr. W. H. Alexander; an extension erected at the expense of Lord Duveen was opened in 1933. The amount for salaries and expenses, including a grant of £722 for purchase of portraits, was estimated at £10,061 in 1936-37.

*Director, Keeper, and Secretary, H. M. Hake, C.B.E. .... £1,058*  
*Assistant to Director, C. K. Adams .... £337 to £738*  
*Assistant and Lecturer, J. Steegmann ..... £337 to £738*

### TATE GALLERY.

Millbank, S.W. 1.

Students' days, Tuesday and Wednesday, 6d.; other days free. For hours and Sundays see National Gallery.

The Tate Gallery was opened in 1897 on the site of Millbank Gaol, the cost of erection (£30,000) being borne by Sir Henry Tate, who also contributed the nucleus of the present collection. The "Turner Wing," built at the expense of the late Sir Joseph Duveen, Bart., was opened to the public in 1910. The Gallery includes a gallery for Modern Foreign Art and a gallery for Sargent's works, opened in 1926, the gift of Sir Joseph

Duveen. Sir Joseph (now Lord) Duveen has added to his benefactions by the gift of a new Sculpture Gallery, now in course of construction.

*Director, James B. Manson ..... £1,161*  
*Assistants, H. S. Ede; D. C. Fincham ..... £337 to £738*

### WALLACE COLLECTION.

Hertford House, Manchester Square, W. 2.

Admission 6d. on Tuesdays and Fridays; other days free. Open on weekdays 10 a.m. to 5 p.m.; Sundays 2 p.m. to 5 p.m. Official lectures daily (Wed. excepted) at 3 p.m., and Saturday at 12 noon. Closed on Good Friday, Christmas Eve and Christmas Day.

The Wallace Collection was bequeathed to the nation by the widow of Sir Rd. Wallace, Bt., K.C.B., M.P., in 1807, and Hertford House was subsequently acquired by the Government. The collection includes pictures, drawings and miniatures, French furniture, bronzes, porcelain, armour, and miscellaneous *objets d'art*. The expenses were estimated at £12,165 in 1936.

*Keeper & Secretary, James G. Mann, M.A., F.S.A. £1,000*  
*Assistants to Keeper, W. P. Gibson, B.A.; Trenchard Cox, M.A. .... £337 to £738*

### NATIONAL LIBRARY OF WALES.

Aberystwyth.

Open free on weekdays, 10 a.m. to 5 p.m.; closed on Sundays.

Founded by Royal Charter, 1907, and maintained by annual grant from the Treasury. One of the six libraries entitled to certain privileges under Copyright Act. Contains approx. 750,000 printed books, 17,000 manuscripts, 160,000 deeds and documents, and numerous maps, prints and drawings. Specialises in manuscripts and books relating to Wales and other Celtic peoples. National Bureau of the Regional Libraries Scheme for Wales and Monmouthshire.

*Librarian, W. Ll. Davies, M.A.*

### NATIONAL MUSEUM OF WALES, Cardiff.

Amgueddfa Genedlaethol Cymru.

Open free on weekdays, 10 a.m. to 5 p.m. (Apr.-Sept., 8 p.m.); Sundays (admission 3d.) 2.30 to 5 p.m.

Founded by Royal Charter, 1907, and maintained by Annual Grant from the Government and Museum rate from the Cardiff City Council. The collections consist of:—(Geology). Relief Maps of Wales, "David Davies" collection of fossil plants, "Griffith J. Williams" collection of minerals, and extensive collections relating to geology in Wales. (Botany). The Welsh National Herbarium illustrating especially the flora of Wales, and collections illustrating general, agricultural and forest botany. (Zoology). Collections of skins, British mammals and birds, eggs of British birds, extensive entomological collections, British molluscs, spirit collections, all of special Welsh interest. (Archaeology). Welsh prehistoric, Roman and other antiquities, casts of pre-Norman monuments of Wales (Folk Culture). Welsh Folk Crafts and Industries. Collections illustrating Welsh Life 16th to 19th centuries. (Art). Swansea and Nantgarw porcelain, the De Winton collection of Continental porcelain. The works of Richard Wilson, R.A., and of Frank Brangwyn, R.A., are well represented. Pyke-Thompson collection of water-colour drawings and a general collection of paintings in oil; sculpture, silver, &c.

*President, Rt. Hon. the Earl of Plymouth.*  
*Vice-President, Rt. Hon. W. G. A. Ormsby-Gore, M.P.*  
*Treasurer, Sir W. Reardon Smith, Bt.*  
*Director, Sir Cyril Fox, Ph.D., F.S.A.*  
*Secretary, A. H. Lee, M.C.*

*Keepers (Geology) Dr. F. J. North, F.R.S.; (Botany) H. A. Hyde, M.A., F.R.S.; (Zoology) Colin Matheson, M.A., B.Sc.; (Archaeology) V. E. Nash-Williams, M.A., F.S.A.; (Folk Culture) Iorwerth C. Peate, M.A., F.S.A.; (Art) Isaac J. Williams.*

### NATIONAL GALLERY OF SCOTLAND,

Mound, Edinburgh.

Open free Sun. 2 p.m. to 5 p.m. (4 in winter); Mon., Tu., Wed., Sat., 10 a.m. to 5 p.m. (4 in winter). Admission 6d. Thurs. and Fri., 10 a.m. to 5 p.m. (4 in winter).

*Director, Stanley Cursitor, O.B.E., A.R.S.A., R.S.W.*  
*Keeper, A. E. Haswell Miller, M.C., R.S.W.*  
*Secretary, Robert Moncrieff.*

## NATIONAL DEBT OFFICE,

19 Old Jewry, E.C. 2.

The National Debt Commissioners, whose primary function is the application of the Sinking Funds to the reduction of the National Debt, were first constituted by the Act 26 Geo. III., c. 31 (1786). Details of the Sinking Funds now operative will be found on page 634. By subsequent legislation their duties have been extended to cover the investment and financial management of many Public Funds (including the Savings Banks Funds, the Local Loans Fund, the National Health and Unemployment Insurance Funds, the Irish Land Purchase Fund, &c.). They also exercise administrative control over Trustee Savings Banks. Government Life Annuities may be purchased by the Public from the Commissioners without limit of amount in exchange for holdings of the Government Stocks or for cash. The Commissioners are the Speaker, the Chancellor of the Exchequer, the Master of the Rolls, the Lord Chief Justice, the Accountant-General of the Supreme Court, and the Governor and Deputy-Governor of the Bank of England. The net administrative expenses of the Board were estimated at £2,827 in 1926-37.

## DEPARTMENT OF OVERSEAS TRADE.

(Joint Department under the Foreign Office and the Board of Trade).

35 Old Queen Street, S.W. 1. (Whitehall 9040.)

*Branch Offices 9-12, Basinghall Street, E.C. 2. (Metropolitan 4723), and 70, Victoria Street, S.W. 1. (Victoria, 4666).*

For H. M. Trade Commissioners, see p. 216.

For Commercial Diplomatic Officers, see pp. 901-999 (Complete Edition).

This Department was formed during the autumn of 1917 as a joint Department under the Foreign Office and Board of Trade, and is represented in Parliament by a Parliamentary Secretary, who occupies the position both of Additional Parliamentary Under-Secretary of State for Foreign Affairs and of Additional Parliamentary Secretary for the Board of Trade. The Department is concerned mainly with the promotion and development of Overseas Trade, and comprises the former Department of Commercial Intelligence of the Board of Trade and a part of the Foreign Trade Department of the Foreign Office. It has, in addition, taken over certain functions formerly performed by the Foreign Office in connexion with Commercial Intelligence and with the Commercial Diplomatic and Consular Services. The cost of administration was estimated at £458,371 in 1926-37.

In considering the major questions affecting United Kingdom export trade, the Minister in charge of the Department has the assistance of the Overseas Trade Development Council, of which he is Chairman.

The Council consists of leading representatives of commerce and industry, and of Civil Servants especially concerned with trade matters, and it ensures that the Department is kept in close touch with industrial opinion.

*Secretary, Captain Rt Hon. D. Euan Wallace, M.C., M.P.* ..... £2,000

*Private Secretaries, W. Hargham; A. E. Perival.*

Darby (allowance £30); Miss M. E. Andrews; A. Howard; A. Gunsberg; J. J. Rudling; C. J. Bazley; A. W. Freeman; J. F. Frow; E. J. Frost; F. C. B. Hood; A. E. Johnson; R. Kersley; E. P. Stears; F. H. Stemberidge; H. E. Tucker

(Men) £396 to £515; (Women) £313 to £396  
Chief Superintendent of Typists, Miss F. A. Ensor

## IMPERIAL INSTITUTE.

South Kensington, S.W. 7.

The Imperial Institute was erected as a memorial of the Jubilee of Queen Victoria (1837-1887). The principal departments of the Institute are:—(1) Permanent Empire Exhibition. The Exhibition Galleries are open to the public free from 10 a.m. to 5 p.m. (Sundays 2.30 p.m. to 6 p.m.). After a complete re-organisation of the exhibits and their disposition in the various Courts, the collections illustrate the products and also the scenery and life of the different countries of the British Empire. There is a Central Stand for distribution of literature and for dealing with enquiries. Lecture demonstrations are given to parties from the schools and to members of the public at stated times. A Cinema has been installed in which films are shown daily depicting the life, sports and industries of the countries of the British Empire. (2) The Empire Film Library, inaugurated 1935 by H.R.H. the Duke of Gloucester, circulates cinematograph films of Empire countries to schools and societies in the United Kingdom. (3) Plant and Animal Products Department. This department deals with all investigations and enquiries relating to Foodstuffs, Oil-seeds, Essential Oils, Rubber, Fibres, Tobacco, Timbers, Gums and Resins, and similar products. An Advisory Council has been appointed, and technical advisory committees, including representatives of the trades or industries concerned, co-operate in the work on Rubber, Timber, Silk, Vegetable Fibres, Tanning Materials, Hides and Skins, Essential Oils and Resins, and Oils and Oil-seeds. (4) Mineral Resources Department. This department is responsible for dealing with enquiries, investigations and publications relating to minerals. An Advisory Council on Minerals has been appointed and there are advisory technical committees as follows: Mining Law Technical, Precious Metals, Base Metals, Iron and Iron-Alloy Metals, Coal and Petroleum, Chemical Industries and Miscellaneous Minerals.

## BOARD OF GOVERNORS.

Responsible Minister and President, The Parliamentary Secretary, Department of Overseas Trade. Vice-President, Sir Edward Crowe, K.C.M.G. (Comptroller-General, Department of Overseas Trade). Secretary, J. A. Nelson, B.Sc.

The Board of Governors is assisted by a Managing Committee and by the Advisory Councils and Technical Committees.

## PRINCIPAL OFFICERS.

Director, Sir Harry Lindsay, K.C.I.E., C.B.E. General Secretary, J. A. Nelson, B.Sc. Plant and Animal Products Department, S. E. Chandler, D.Sc., A.R.C.S., F.L.S. (Principal); J. R. Furlong, Ph.D., A.I.C.; H. J. Jeffery, A.R.C.S., F.L.S. (Vice-Principals).

Exhibition Galleries, H. Spooner (Curator). Accountant and Establishment Officer, E. J. Palmer.

## PATENT OFFICE

(and Industrial Property Department, Board of Trade), 25 Southampton Buildings, W.C. 2.

The prerogative of the Crown to grant monopolies was limited by 21 James I. c. 3 to the grant of Letters Patent for New Inventions, and the control of such grants was transferred to the Board of Trade by 46 & 47 Vict. c. 57. The duties of the Department, which deals mainly with the granting of patents, the registration of designs and trade marks, and with questions relating to literary and artistic copyright, are performed by a Comptroller-General with a staff of officials. For the year 1935 the expenditure was £418,339, and the revenue from fees, &c., was £650,646.

Comptroller-General, M. F. Lindley.....£1,650  
Private Secretary, H. W. Clarke.

Assistant Comptrollers, A. J. Martin, O.B.E.; A. J. Wilson, £1,161 to £1,360; A. S. Cox, O.B.E.

*Staff Officer, H. Bottomley* ..... £515 to £634

## PAYMASTER GENERAL'S OFFICE.

Whitehall, S.W. 1.

The Paymaster General's Office was formed by the consolidation in 1835 of various separate pay departments then existing, some of which dated back at least to the Restoration of 1660. Other offices were incorporated in 1848. Its function is that of paying agent for the different Government Departments, other than the Revenue Departments. The majority of its payments are made through banks (to whose accounts the necessary transfers are made at the Bank of England), but cash payments are also made, and the payment of pensions is an important feature of its work. The Establishment expenses were estimated at £95,000 in 1906-7.

*Paymaster General, Maj.-Gen. The Lord Hutchison of*  
*Montrose, K.C.M.G., C.B., D.S.O.* ..... unpaid  
*Assistant Paymaster General, J. Mahood, i.s.o.* ..... £1,300

#### PORT OF LONDON AUTHORITY.

##### Head Office, London, E.C. 3.

The Port of London Authority, established under the Port of London Act, 1908 (8 Edw. VII., ch. 69), on the 31st March 1909, for the purpose of administering, preserving, and improving the Port of London, consists of 25 members—10 appointed and 15 elected, with a Chairman appointed by the Authority.

The following undertakings were transferred to the Port Authority as from the 31st March, 1909:—Thames Conservancy (all rights, powers, and duties of the Conservators of the Thames in respect of the river below Teddington); London and India Docks Company; Surrey Commercial Dock Company; Millwall Dock Company; and Watermen's Company, except certain property and funds. The working of the Port for the year ended March 31, 1936, showed a surplus of £6,166, leaving a balance of £405,318 carried forward.

*Chairman*, Rt. Hon. Lord Ritchie of Dundee.

*Vice-Chairman*, Rt. Hon. Thomas Wiles.

##### APPOINTED MEMBERS.

By the Admiralty, Adm. Sir F. C. Learmonth, K.B.E., C.B.; (*Ministry of Transport*) J. D. Gilbert, D.L., J.P. J. T. Aubrey Lloyd; W. J. McAllister; A. Maclean; Sir A. H. Read, J.P.; O. H. Smith; W. C. Warwick; Rt. Hon. Thomas Wiles, P.C.; W. L. Wrightson.

##### Officers.

*General Manager*, Sir David J. Owen.

*Solicitor and Secretary*, J. D. Ritchie, M.C.

#### POST OFFICE.

##### Chief Office, St. Martin's-le-Grand, E.C. 1.

A House of Commons report in 1844 states: "It is uncertain at what precise period the Crown undertook to be the regular carrier of letters for its subjects." The first "Master of the Posts" was appointed in 1526, but the duty was not then undertaken as a remunerative department of the Government. The Post Office is now one of the three great revenue-collecting departments, and while efficiently discharging its multifarious duties, shows a large annual profit. It also receives large sums for duties and taxes on behalf of the Inland Revenue Department, for certain licences for the Customs and Excise Department and the County Councils, and for National Insurance on behalf of the National Health Insurance Commissioners and the Board of Trade. The Post Office also pays Widows', Orphans' and Old Age Pensions, and Naval, Military and Air Force Pensions and Allowances. The Penny Post was inaugurated in 1840, the Book Post in 1825, the Post Office Savings Bank in 1861, the Post Office Telegraphs in 1870, the Money Order Office in 1902, Postal Orders in 1881, the Parcel Post in 1883, and the Telephone Service in 1892. The expenses of the Post Office (Salaries, Wages, etc., only) were estimated at £40,647,600 in 1936-37.

*Postmaster General*, Major the Rt. Hon. G. C. Tryon, M.P.

£2,500

*Principal Private Secretary*, H. Napier.

*Assistant Private Secretary*, J. Vaughan.

*Parliamentary Private Secretary*, Hon. R. E. B. Beaumont, M.P.

*Assistant Postmaster General*, Sir Walter J. Womersley, M.P.

£1,200

*Private Secretary*, D. C. H. Abbott.

*Parliamentary Private Secretary*, Lt.-Col. A. P. Heneage, D.S.O., M.P.

£3,000

*Director General*, Sir Thomas Gardiner, K.B.E.

*Private Secretary*, S. D. Sargent.

*Deputy Director General*, W. R. Birchall.

£2,200

*Private Secretary*, Miss E. M. Tostevin.

*Assistant Director General*, T. H. Boyd.

£2,000

#### Post Office Board.

**Miss Megan Lloyd George, m.p.; The Lord Luke,**  
**m.b.; Miss Isabel MacDonald; Sir Frederick**  
**Marquis; R. M. Holland Martin, c.m.; Sir Ronald**  
**Matthews; The Hon. Dorothy Pickford; G. D.**  
**Shepherd, f.c.a.; T. Somerset, m.p.; Rear-Adm.**  
**Sir M. Sueter, c.b., m.p.; J. W. Sutton; Maj.-Gen.**  
**Rt. Hon. Sir Frederick Sykes, o.c.s.i., o.c.i.e., g.b.e.,**  
**k.c.b., c.m.g.; G. W. Thomson.**

#### PRIVY COUNCIL OFFICE. Whitehall, S.W. 1.

The Privy Council is of very ancient origin. A Council, the number of which was about twelve, was instituted by Alfred, 895, and it discharged the functions of State now confined to members of the Cabinet. In the Middle Ages the Chief Advisers of the King who were

permanently about him formed the Privy Council. Having become unwieldy, it was reconstituted in 1679. At present it consists of certain eminent persons whose names are given on p. 254. Members of the Cabinet must be Privy Counsellors, and they principally form the acting Privy Council. The Council is summoned as such to act "with others" upon the demise of the Crown, and many matters are referred by the Sovereign to Committees of the Council, some of which are standing Committees, and others constituted to deal with particular cases, e.g., the Judicial Committee, the Board of Trade, &c. The Lord President of the Council is one of the Great Officers of State, and as such is always a prominent member of the Cabinet.

**Lord President of the Council, Rt. Hon. James Ramsay**

**MacDonald, m.p.** ..... £1,000

**Private Sec., J. H. Peters, d.m.c.**

**Personal Private Sec., Miss R. Rosenberg, c.b.e.**

**Parliamentary do., Maj. Sir Ralph Glynn, Bt., m.c.,**

**m.p., unop.**

**Clerk of the Council, Secretary of the Cabinet and Secretary of the Committee of Imperial Defence, Col. Sir Maurice Hankey, o.c.b., o.c.m.g., o.c.v.o., d.c.l.**

**Deputy Clerk of the Council & Chief Clerk, E. C. F.**

**Leadbitter** ..... £1,150 to £1,450

**Senior Clerk, F. J. Fernan** ..... £738 to £953

**Staff Officer, C. W. Lunley, i.s.o.** ..... £515 to £634

#### Cabinet Office.

**2 Whitehall Gardens, S.W. 1.**

**Secretary, Col. Sir Maurice Hankey, o.c.b., o.c.m.g.,**

## PUBLIC WORKS LOAN BOARD.

Old Jewry, E.C. 2.

The Public Works Loan Board was created in 1817 for the purpose of advancing money to Municipal Authorities for Public Works. During the financial year 1935-36 the Commissioners advanced loans amounting to £13,873,516. Of the total advanced out of the Local Loans Fund the sum of £8,222,475 was for purposes of the Housing Acts.

The average rate of interest was:—

£ s. d.	per cent. in	1935-36
3 5 1	"	1924-35
3 7 4	"	1924-35
3 12 7	"	1924-35
4 2 2	"	1924-35
4 15 2	"	1924-35
4 17 11	"	1924-35
5 1 0	"	1924-35
5 2 0	"	1924-35
5 6 0	"	1924-35

*Chairman, A. C. Gladstone* ..... *unp*  
*Deputy-Chairman, R. Abel Smith* ..... *unp*  
*Other Commissioners, E. H. Lloyd; R. L. Newman; Lord Clwyd; Alfred Midway; Hon. Sir William H. Goschen, K.B.E.; Sir C. Eric Hambro, K.B.E.; C. R. Gilliat; G. E. B. Bromley-Martin; E. Clifton Brown; W. B. Neville; O. Latham; Harrison Harrow; W. T. Jackson; Hon. F. J. Rennell Rodd; B. F. G. Currie.*

*Secretary, H. G. H. Barnes* ..... £1,650  
*Asst. Secretary (Legal), D. F. Buckley* ..... £950 to £1,200  
*Asst. do. and Chief Clerk, W. F. Thomas* ..... £738 to £953

## QUEEN ANNE'S BOUNTY.

3 Dean's Yard, Westminster, S.W. 1.

(Hours 10 to 5.)

The Governors of Queen Anne's Bounty were incorporated in 1704 by Royal Charter. For many years they made capital grants to poor livings, mainly for augmentation, and often to meet benefactions of equal or greater amount, but since 1919 they have ceased to make grants for augmentation. The total benefactions and grants since the establishment of the Corporation amounted at the end of 1935 to £8,919,160. The Governors now make grants to benefices not exceeding £300 in net annual value, for the purpose of assisting the incumbents to meet their annual payments for dilapidations, as well as grants for improvements to parsonage houses and the purchase of fixtures therein. The total amount of the grants for the year 1935 was £8,044 in respect of 603 benefices. The Governors are the central authority under the Ecclesiastical Dilapidations Measures, 1923 and 1929, under which they disbursed £26,207 in 1935; under the Tithe Act 1916 (26 George 5 and 1 Edward 8 Ch. 43) Government stock will be issued to the Governors in redemption of the tithe rent charge vested in Queen Anne's Bounty by the Tithe Act 1925 (15 & 16 George 5 Ch. 89) in trust for benefices and ecclesiastical corporations. Many other statutory duties are carried out by them and they are the trustees of endowment funds for a large number of benefices. The Governors include the Archbishops, Bishops and many other *ex-officio* ecclesiastical and lay persons. The Archbishop of Canterbury is the Chairman of the Corporation, and the First Church Estates Commissioner is the Ecclesiastical Commission. The Chairman of the Finance and Estates Committee, Annual Report and Accounts are presented to Parliament. A short account of the history and activities of the Corporation has recently been published.

*Secretary, W. G. Hannah.*  
*Asst. Secretary, E. J. Hare.*

*Head of Tithe Division, C. S. Amsden.*  
*Solicitor, N. H. Oldham.*

*Asst. Solicitor, L. R. C. Cornford.*  
*Legal Assistant, E. W. R. Peterson.*  
*Architect, Martin Skinner.*

*Asst. Architect, A. P. Lay.*  
*Chief Accountant, H. R. Ford.*  
*Asst. Accountant, M. L. Warren.*

*Accountant (Tithe Accounts), C. G. Harris.*  
*Asst. Accountant (Tithe Accounts), D. F. Herring.*

*Asst. Heads of Divisions, G. C. Baird; W. J. Gimson; J. R. Brumfit; S. B. Wood; C. Needell; S. C. Grimes.*

*Higher Executive Officers, F. E. Willott; R. E. Darby; F. W. Eatherley; A. Fraser; W. E. Tickner; G. Burgess; J. T. Waters; F. O. Dougan.*

## RAILWAY ASSESSMENT AUTHORITY

AND

## ANGLO-SCOTTISH RAILWAYS ASSESSMENT AUTHORITY.

32 Queen Anne's Gate, London, S.W. 1.

[Tel.: Whitehall 8818]

The Railways (Valuation for Rating) Act, 1930, applies the principle of valuation *in cumulo* to the valuation, for rating, of the principal railways in England and Wales.

The Railway Companies to which the Act of 1930 in the first instance applied were the London, Midland and Scottish, the London and North Eastern, the Great Western, the Southern and the Metropolitan (since merged into the London Passenger Transport Board), and the valuation, for purposes of local rates, of "railway hereditaments" occupied by those Companies fell to be settled by the Railway Assessment Authority set up under the Act (and not by the local rating authorities and assessment committees) as from April, 1931.

By the London Passenger Transport (Valuation for Rating) Scheme and Order, 1935, made in pursuance of section 92 (3) of the London Passenger Transport Act, 1933, the Act of 1935, with certain modifications, was applied to the "transport undertaking" of the London Passenger Transport Board (which includes, *inter alia*, the old Metropolitan Railway, the Tube and Underground Railways, and the tramways (including trolleybus systems) transferred to the Board, but excludes the Board's motor road-transport system). The valuation, for purposes of local rates, of the hereditaments occupied by the Board for the purposes of the "transport undertaking" fell to be determined by the Railway Assessment Authority (and not by the local rating authorities and assessment committees) as from April, 1936.

The Act of 1935 also provides for the setting up of an Anglo-Scottish Railways Assessment Authority (called the "Joint Authority") whose function is to apportion the bulk of the receipts of the two amalgamated railway companies operating in England (including Wales) and in Scotland (*viz.* the L. M. & S. and the L. & N. E.) between those two countries, and then to certify to the Railway Assessment Authority and to the Assessor of Public Undertakings (Scotland) the amounts of the net receipts attributable to England (including Wales) and Scotland, respectively, for the purposes of the several *cinquante* valuations to be made by those authorities.

*Chairman of the Railway Assessment Authority and of the Joint Authority*, Joshua Scholefield, K.C.  
*Clerk of the Railway Assessment Authority and of the Joint Authority*, A. E. Joll.

## DEPARTMENT OF SCIENTIFIC AND INDUSTRIAL RESEARCH.

16 Old Queen Street, Westminster, S.W. 1.

Appointed by Order in Council dated July 28, 1915 (amended February 6, 1928), to direct the application of any sums of money provided by Parliament for the organisation and development of Scientific and Industrial Research. The Committee consists of the holders for the time being of certain Ministerial offices. The Order in Council also appointed an Advisory Council to whom all proposals for researches stand referred. By Charter dated November 23, 1916, amended by a supplemental Charter dated April 27, 1928, the members of the Committee of the Privy Council were created a Body Corporate under the name of "The Imperial Trust for the Encouragement of Scientific and Industrial Research" to hold and dispose of money and other property for the purposes of the Committee. On December 15, 1916, a separate Department, having its own Parliamentary Vote, was created for the service of the Committee.

The aggregate net estimate for the Department in 1936-37 amounts to £621,661, an increase of £20,934 on the same estimate for 1935-36. The gross estimate amounts to £854,428. Headquarters administration, £20,012; Grants for Research, £152,850; Research Work and Research Establishments (except Geological Survey and Museum), £602,332; Geological Survey of Great Britain and Museum of Practical Geology, £72,234.

*President of the Committee of the Privy Council*, The Lord President of the Council.

*Advisory Council*, Lord Rutherford, O.M., D.Sc., LL.D., F.R.S. (*Chairman*); Sir John Cadman, G.C.M.G., D.Sc., LL.D.; Professor A. Fowler, C.B.E., D.Sc., Sc.D., F.R.S.; Sir Clement D. M. Hindley, K.C.I.F., M.Inst.C.E., M.Inst.T., M.E. (Ind.); Sir James H. Jeans, D.Sc., LL.D., F.R.S.; T. Franklin Sibly, D.Sc., LL.D.; W. H. Mills, Sc.D., F.R.S.; Lord Riverdale, K.B.E., LL.D.; Prof. A. Robertson, M.Inst.C.E., M.I.Mech.E., D.Sc.; Prof. Sir Albert C. Seward, Sc.D., D.Sc., LL.D., F.R.S.; H. B. Shackleton, *Secretary to the Council*, Sir Frank E. Smith, K.C.B., C.B.E., D.Sc., LL.D., Soc. R.S.

### Headquarters Staff.

*Secretary*, Sir Frank E. Smith, K.C.B., C.B.E., D.Sc., LL.D., Soc. R.S. £3,000

*Private Secretary*, H. Wooldridge.

*Principal Assistant Secretary*, L. S. Lloyd, C.B.

*Assistant Secs.*, A. L. Hetherington; P. J. Wheelodon, O.M.E. (*Establishment Officer*) ..... £1,450 to £1,650  
*Principals*, I. C. Bromley; O. F. Brown; G. R. D. Hogg; W. A. M. Murray; R. O'F. Oakley ..... £800 to £1,100  
*Senior Staff Officer*, C. D. James ..... £680 to £847  
*Records Officer*, C. A. Spencer ..... £680 to £800  
*Asst. Recor. Officer*, H. J. Dowden ..... £395 to £515  
*Staff Officers*, W. H. Beavis; L. W. Crawford, £515 to £634; Miss M. Robb ..... £395 to £515

*Higher Grade Clerks*, T. Lacey; W. A. Macdonald; F. W. Smith; J. Williamson, £395 to £515; Miss M. J. O'Reilly ..... £313 to £396

### Building Research.

*Chairman of Board*, Sir Raymond Unwin, D.Tech., F.R.I.B.A.

#### Building Research Station.

Bucknalls, Garston, near Watford.

*Director of Research*, R. E. Stradling, C.B.E., D.Sc., Ph.D., M.Inst.C.E. .... £1,350 to £1,650  
*Principal Director*, I. G. Evans ..... £800 to £1,100  
*Principal Scientific Officers*, B. Bakewell; W. L. Cowley ..... £850 to £1,010  
*Senior Scientific Officers*, F. L. Brady; N. Davey, Ph.D.; A. F. Dutton; R. Fitzmaurice; F. M. Lea, D.Sc. .... £680 to £800  
*Scientific Officers*, H. E. Beckett; G. E. Bessey; R. C. Bevan; D. G. R. Bonnell, Ph.D.; B. Butterworth; L. F. Cooling; A. D. Cowper; W. R. Crawford, Ph.D.; E. N. Fox; D. E. Gibson; G. Grime; F. E. Jones; H. M. Llewellyn; C. J. Morreau; A. J. Newport; T. W. Parker, Ph.D.; S. C. Redshaw; R. J. Schaffer; F. L. Shipman, O.B.E.; F. G. Thomas; C. M. Watkins, Ph.D. .... £400 to £680  
*Assistants I*, W. W. Davies; F. J. McConnell ..... £400 to £515

*Accountant*, Miss E. A. Leighton ..... £515 to £634  
*Higher Grade Clerk*, Miss N. M. Cragg ..... £313 to £396

### Chemical Research.

*Chairman of Board*, Professor N. V. Sidgwick, C.B.E., Sc.D., F.R.S.

#### Chemical Research Laboratory.

Teddington, Middlesex.

*Director of Research*, Sir Gilbert T. Morgan, O.B.E., D.Sc., LL.D., F.R.S. .... £1,450  
*Principal Scientific Officer*, D. D. Pratt, Ph.D. (*acting*)  
*Senior Scientific Officers*, R. Taylor; A. C. Thaysen, Ph.D.; W. H. J. Vernon, D.Sc., Ph.D. .... £680 to £800  
*Scientific Officers*, H. J. Bunker; F. H. Burstall; K. H. Butlin; E. A. Coulson, Ph.D.; G. R. Davies, Ph.D.; D. V. N. Hardy, Ph.D.; H. Ingleson, Ph.D.; N. J. L. Megson; J. G. Mitchell, Ph.D.; A. E. J. Pettot; L. P. Walls, Ph.D.; E. Walton, Ph.D.; F. Wormwell, Ph.D. .... £400 to £680; Miss J. Stewart, Ph.D.

*Staff Officer*, F. H. Bell ..... £320 to £550  
..... £515 to £634

### Food Investigation.

*Chairman of Board*, Sir Frank E. Smith, K.C.B., C.B.E., D.Sc., LL.D., Soc. R.S.

*Director of Food Investigation*, E. Barnard, D.Sc.

*Administrative Assistant*, A. R. H. Cox ..... £1,400 to £1,487

#### Low Temperature Research Station.

Downing Street, Cambridge.

*Superintendent*, F. Kidd, D.Sc. .... £1,050 to £1,250  
*Principal Scientific Officer*, T. Moran, D.Sc., Ph.D. .... £850 to £1,010

*Senior Scientific Officers*, E. H. Callow, Ph.D.; T. N. Morris; A. J. Smith, Ph.D. .... £680 to £800  
*Scientific Officers*, J. Barker, Ph.D.; J. Brooks, Ph.D.; J. M. Bryan, Ph.D.; R. Gano, Ph.D.; R. B. Haines, Ph.D.; C. S. Hanes, Ph.D.; C. H. Lea, Ph.D.; E. C. Smith, Ph.D.; R. G. Tonkins, Ph.D. .... £400 to £680

#### Terry Research Station.

Aberdeen.

*Superintendent*, A. Lumley ..... £1,050  
*Scientific Officers*, J. A. Lovern, Ph.D.; G. A. Reay, Ph.D.; J. G. Sharp, Ph.D. .... £400 to £680

#### Dilton Laboratory.

East Malling, near Maidstone, Kent.

*Superintendent*, C. West, D.Sc. .... £850 to £1,050  
*Scientific Officers*, J. K. Hardy; A. C. Hulme, Ph.D.; W. H. Smith ..... £400 to £680

### Forest Products Research.

*Chairman of Board*, Principal Sir James C. Irvine, C.B.E., D.Sc., LL.D., F.R.S.

#### Forest Products Research Laboratory.

Princes Risborough, Aylesbury, Bucks.

*Director of Research*, W. A. Robertson ..... £1,162 to £1,360  
*Timber Mechanics Officer*, C. J. Chaplin ..... £1,100  
*Principal Scientific Officer*, S. T. C. Stillwell ..... £850 to £1,010

**Senior Scientific Officers, W. G. Campbell, K. St. G. Cartwright, R. C. Fisher, r.h.d.** ..... £680 to £800  
**Scientific Officers, W. W. Barkas, R. G. Bateson, J. Bryan, F. R. Cunn, S. H. Clarke, H. A. Cox, W. P. K. Fludlay, P. Harris, R. A. G. Knight, J. Latham, E. A. Parkin, r.h.d., B. J. Rendle, S. A. R. ...** ..... £400 to £580  
**Assistant, Miss M. H. Oldham, r.h.d., Miss C. B. Pettifor, £300 to £550; F. H. Armstrong, E. H. Nevard** ..... £337 to £456  
**Assistant, I. H. E. Kinnus** ..... £400 to £580  
**Temporary Assistant, A. N. David, Higher Grade Clerk, L. Forbes** ..... £396 to £515

#### Fuel Research.

**Chairman of Board, Sir Harold Hartley, c.b.e., m.c., F.R.S.**  
**Director of Research, F. S. Sinnatt, c.b., m.b.e., d.s.c.** ..... £1,350 to £1,650  
**Assistant to the Director, Maj. E. O. Houlditch** ..... £800 to £1,100

#### Fuel Research Station.

**Blackwall Lane, East Greenwich, S.E. 10.**  
**Chief Engineer, Eng.-Capt. J. Fraser Shaw, r.n. £1,325**  
**Chief Chemist, J. G. King, r.h.d.** ..... £850 to £1,010  
**Senior Scientific Officers, A. T. Barber, A. Blackie, E. C. Hurley, D. McDougal, A. B. Manning, J. ...** ..... £680 to £900  
**Scientific Officers, H. Bardgett, J. H. G. Carillo, C. M. Cawley, r.h.d., R. Cook, H. E. Crossley, D. T. Davies, r.h.d., R. Dickinson, C. C. Hall, r.h.d., L. Horton, r.h.d., F. E. T. Kingman, r.h.d., A. C. Maries, H. E. Newall, r.h.d., J. Rogers, A. H. Taylor, m.b.e., R. A. A. Taylor, W. J. Walker, r.h.d., E. T. Wilkins, r.h.d., F. A. Williams, r.h.d., L. A. Woodward, r.h.d., £400 to £680; W. I. Collins** ..... £337 to £456

**Assistants, I. R. B. Clarke, C. W. G. Ockelford** ..... £400 to £515  
**Senior Staff Officer, C. B. Fitzgerald** ..... £634 to £738  
**Higher Grade Clerk, R. Rago** ..... £396 to £515

#### Physical and Chemical Survey of National Coal Resources.

**Senior Scientific Officers, L. Slater, r.h.d. (Sheffield); W. J. Skilling (Glasgow)** ..... £680 to £800  
**Scientific Officers, H. Berry (Newcastle); J. R. Campbell, r.h.d. (Glasgow); G. Coles, r.h.d. (Nottingham); A. Dawe (Nottingham); G. W. Fenton, r.h.d. (Sheffield); D. Hicks (Treforest); J. H. Jones, r.h.d. (Newcastle); J. C. Macrae (Leeds); J. O'N. Millott, r.h.d. (Stoke); F. Searf (Birmingham); A. M. Wandless (Leeds)** ..... £400 to £680

#### Radio Research.

**Chairman of Board, Lt.-Col. A. G. Lee, o.b.e., m.c., m.i.e.e.**

#### Radio Research Station.

**Slough, Bucks.**  
**(Staff included under National Physical Laboratory, Radio Department.)**

#### Road Research.

**Chairman of Board, Major F. C. Cook, d.s.o., m.c., m.i.e.e.**  
**Director of Research, R. E. Stradling, c.b., m.c., d.s.c., r.h.d., m.i.e.e.**

#### Road Research Laboratory.

**Harmondsworth, West Drayton, Middlesex.**  
**Assistant Director, W. H. Glanville, d.s.c., r.h.d., m.i.e.e.** ..... £850 to £1,010  
**Senior Scientific Officer, A. G. Tarrant** ..... £680 to £800  
**Scientific Officers, G. Bird, A. R. Lee, r.h.d.; T. J. Lonsdale, r.h.d.; A. H. D. Markwick; R. Preston; W. J. O. Scott; F. N. Sparkes** ..... £400 to £680

#### Water Pollution Research.

**Chairman of Board, Sir R. Robertson, k.b.e., d.s.c., l.i.d., f.r.s.**  
**Director of Research, H. T. Calvert, m.b.e., r.h.d., f.i.c. (part time).**

**Assistant Director, A. Parker, d.s.c.** ..... £1,050 to £1,250

**Geological Survey of Great Britain and Museum of Practical Geology.**

**Head Office: Exhibition Road, South Kensington, S.W. 7, and Southpark, 20, Grange Terrace, Edinburgh (Branch Offices at Manchester, Newcastle-on-Tyne, and York).**

**The Geological Survey and Museum was commenced in 1831; it was under the Science and Art Department**

**from 1853 till 1900, when that Department became merged in the Board of Education. On Nov. 1, 1919, the administrative control of the Survey and Museum was transferred to the Committee of the Privy Council for Scientific and Industrial Research. The normal work of the Survey includes the preparation of geological maps and memoirs dealing with the general survey of the country and with various economic aspects of that survey. The Museum of Practical Geology conserves and exhibits rocks, minerals and fossils which, afford evidence for the published records of the survey and illustrate that survey. It is a function of the Museum to exhibit to members of the public from all parts of the world and especially Great Britain.**

**Chairman of Geological Survey Board, T. Franklin (Sd.), d.s.c., f.r.s.**

**Director of Survey and Museum, (vacant)**

**Assistant to Director, H. Dawes (London), M. V. ... d.s.c. (South)** ..... £1,050 to £1,250

**Principal Geologists, C. F. N. Bromhead, R. G. ...**

**Geologists, C. H. Durrant, T. Eastwood, J. ...**

**Geologists, J. E. Bailey, m.b.e., f.r.s.; T. H. ...**

**Geologists, G. A. Burnett, C. L. ...**

**Geologists, E. E. I. Dixon, F. H. Edmonds, V. A. Eyles, A. Fowler, D. ...**

**Geologists, R. W. Pocock, d.s.c.; T. Robertson, r.h.d.; L. Shortok, d.s.c.; J. B. Simpson, ...**

**Geologists, F. M. Trotter, d.s.c.; D. A. Wray, r.h.d.** ..... £630 to £800

**Geologists, J. K. Allan; F. W. Anderson; W. ...**

**Geologists, S. Buchan, r.h.d.; A. J. Butler; R. ...**

**Geologists, C. F. Davidson; K. C. ...**

**Geologists, W. N. Edwards; S. E. Hollingworth, d.s.c.; S. C. A. Holmes; R. C. B. Jones, m.c.; W. Q. Kennedy, d.s.c.; J. K. ...**

**Geologists, J. K. ...**

**Geologists, J. K. ...**

**Geologists, J. K. ...**

**Geologists, J. K. ...**

**Geologists, J. K. ...**

**Geologists, J. K. ...**

**Geologists, J. K. ...**

**Geologists, J. K. ...**

E. J. Evans; N. Fleming; J. A. Hall; A. E. Knowler; D. S. Perfect, D.Phil.; W. E. T. Perry; R. W. Powell; M. de Sellencourt; G. G. Sherratt; J. Thewlis; W. A. Wood ..... £400 to £680  
 Assistants I., A. G. Williams, M.B.E., £396 to £575;  
 J. G. Durham; R. R. Strand ..... £396 to £515  
 Principal Observer, A. C. Cooper ..... £402 to £456

**Electricity Department.**

Superintendent, E. H. Rayner, sc.d. .... £953 to £1,161  
 Principal Scientific Officer, J. W. T. Walsh, D.Sc. .... £850 to £1,010

Senior Scientific Officers, H. Buckley; L. Hartshorn, D.Sc.; R. S. J. Spilsbury ..... £680 to £800  
 Scientific Officers, A. H. M. Arnold, M.Eng., Ph.D.; N. F. Astbury; H. C. Booth; G. W. Bowdler; L. J. Collier; E. H. Crawford; R. Davis; C. Dunbar; T. H. Essen; A. Felton; C. J. W. Gricevson; T. H. Harrison, Ph.D.; P. J. Higgs; T. I. Jones; L. H. McDermott; J. S. Preston; E. Rushton; W. G. Standing; W. S. Stiles, Ph.D.; J. E. P. L. Vigoureux; W. H. Ward; C. E. Webb ..... £400 to £680  
 Assistants I., W. Barnett; W. H. Eastland; H. C. Sturgeon ..... £396 to £515  
 Principal Observer, W. H. H. Brookes ..... £402 to £456

**Radio Department.**

Principal Scientific Officer, R. L. Smith-Rose, D.Sc., Ph.D. .... £850 to £1,010  
 Senior Scientific Officer, F. M. Colebrook ..... £580 to £800

Scientific Officers, R. H. Barfield; J. S. McPetrie, Ph.D.; R. Naismith; H. A. Thomas ..... £400 to £680

**Metrology Department.**

Superintendent, J. E. Sears, C.B.E. .... £1,360  
 Principal Scientific Officer, S. W. Attwell, M.B.E. .... £850 to £1,010

Senior Scientific Officers, F. A. Gould; F. H. Rolt, M.B.E.; V. Stott; G. A. Tomlinson, D.Sc. £680 to £800  
 Scientific Officers, H. Farrell; P. H. Biggs; H. P. Bloxam; J. S. Clark; J. C. Evans, Ph.D.; W. H. Johnson; W. G. Ridge ..... £400 to £680  
 Assistant I., H. A. Dear ..... £396 to £515  
 Higher Grade Clerk, E. C. Cook ..... £396 to £515

**Engineering Department.**

Superintendent, H. J. Gough, M.B.E., D.Sc., Ph.D., F.R.S. .... £1,350

Principal Scientific Officers, A. Bailey; R. W. Penning, M.B.E. .... £850 to £1,010

Senior Scientific Officers, G. A. Hankins, D.Sc.; H. J. Tapsell ..... £680 to £800  
 Scientific Officers, F. Aughtie, Ph.D.; J. Bradley; A. F. C. Brown; W. D. Brown; D. Clayton; W. F. Cope; H. L. Cox; A. Fogg; R. Houghton; A. E. Johnson; C. E. Phillips; L. E. Prosser; H. E. Smith; D. G. Sopwith; S. A. Wood ..... £400 to £680

**Aerodynamics Department.**

Superintendent, E. F. Relf, F.R.S. .... £1,250  
 Principal Scientific Officers, A. Fage; J. L. Nayler ..... £850 to £1,010

Senior Scientific Officers, L. W. Bryant; R. A. Frazier; H. B. Irving; R. Jones, D.Sc.; T. Lavender; E. Ower; L. F. G. Simmons ..... £680 to £800  
 Scientific Officers, H. Bateman; A. S. Batson; J. A. Bevan; A. R. Collar; V. M. Falkner; A. S. Halliday, Ph.D.; C. N. H. Lock; G. A. McMillan; C. Salter; H. C. H. Townsend, D.Sc.; D. H. Williams; R. Warden, Ph.D. .... £400 to £680  
 Assistants I., A. H. Bell; T. H. Fewster ..... £396 to £515

**Department of Metallurgy and Metallurgical Chemistry.**

Superintendent, C. H. Desch, D.Sc., Ph.D., F.R.S. .... £1,416

Principal Scientific Officers, S. L. Archbutt; J. L. Haughton, D.Sc. .... £850 to £1,010

Senior Scientific Officers, G. Barr, D.Sc.; C. H. M. Jenkins, D.Sc.; W. H. Withey ..... £680 to £800  
 Scientific Officers, F. Adecock, M.B.E., D.Sc.; M. L. Becker, Ph.D.; C. A. Bristow; E. H. Bucknall; J. D. Grogan; Miss I. H. Hadfield; Mrs. M. L. V. Haughton, D.Sc.; G. A. Mellor; G. D. Preston; W. P. Rees; T. E. Rooney; T. H. Schofield; H. A. Sloman; V. H. Stott; N. P. Tucker; C. Wainwright; P. G. Ward ..... £400 to £680

**The William Froude Laboratory.**

Superintendent, G. S. Baker, O.B.E., D.Sc., M.Inst.N.A. .... £1,360

Principal Scientific Officer, J. L. Kent, M.Inst.N.A. .... £850 to £1,010

Scientific Officers, J. F. C. Conn; G. Hughes, Ph.D.; F. H. Todd, Ph.D.; W. C. S. Wigley ..... £400 to £680  
 Assistant I., A. W. Riddle ..... £396 to £515

**ROYAL COMMISSION FOR THE EXHIBITION OF 1851.**

Offices, 1 Lowther Gardens, Exhibition Rd., S.W. 7.

[Incorporated by Supplemental Charter as a permanent Commission after winding up the affairs of the Great Exhibition of 1851. It has for its object the promotion of scientific and artistic education by means of funds derived from its Kensington Estate, purchased with the surplus left over from the Great Exhibition.]

President of the Royal Commission (vacant).

Chairman, Board of Management, The Lord Macmillan, LL.D.

Chairman, Science Scholarships Committee, Sir James Jeans, F.R.S.

Secretary to Commissioners, Evelyn Shaw, C.V.O., LL.D.

**THE NATIONAL SAVINGS COMMITTEE.**

Sanctuary Buildings, Westminster, S.W. 1.

The National Savings Movement, set up as the National War Savings Movement in 1916, is directed in England and Wales by the National Savings Committee, and in Scotland by the Scottish Savings Committee. H.M. the King is Patron of the Movement. The Post Office Savings Bank and Trustee Savings Banks co-operate with the National Savings Committee in the work of the Movement, so that small investors may be given facilities to meet both their shorter-period and their longer-period savings needs. At the end of August, 1925, the number of National Savings Groups affiliated to the National Savings Committee was 35,012. For details as to National Savings Certificate (which has been specially associated with the National Savings Committee) see page 70.

President, Sir Robert M. Kindersley, G.B.E.

Chairman, Maj.-Gen. the Rt. Hon. Lord Mottistone, O.B., C.M.G., D.S.O., T.D.

Vice-Chairmen, Sir T. G. Chambers, K.B.E.; Sir Arthur H. Marshall, K.B.E.

Members, Colonel Sir Donald Banks, K.C.B., D.S.O., M.C. (Post Office); W. Groves Barker; A. E. Baxter, O.B.E. (National Union of Teachers); J. Bevan-Evans, O.B.E.; Sir Joseph Burn, K.B.E.; R. H. Charles (Board of Education); W. Davies, C.B.E.; Ald. Sir William Forrest, O.B.E. (Association of Education Committees); Martin Furze; H. E. C. Ga'liff (Treasurer); F. Hardy, M.B.E.; R. M. Holland-Martin, C.B. (Joint Stock Banks); S. H. G. Hughes, C.B.E. (Ministry of Health); W. L. Lawton, O.B.E. (Trustee Savings Banks Association); E. Lund, M.B.E. (Institute of Municipal Treasurers and Accountants); Rt. Hon. Sir Halford Mackinder; Major Sir Charles Mander, Bt.; J. Parker, C.M.; Rt. Hon. Lord Plender, G.B.E.; E. Potts, O.B.E.; Sir George Stuart Robertson, K.C. (Chief Registrar of Friendly Societies); Sir George Royle, C.B.E.; L. Simon, C.B. (Post Office); A. J. Southam, M.B.E.; F. J. Webb, O.B.E.

Secretary, Evan Hughes, C.B.E. .... £1,161 to £1,360

Chief Commissioners, R. D. Kingham, O.B.E. £847 to £953; Mrs. E. N. Goldsmith, O.B.E. .... £738 to £905

Accountant, G. W. Largo ..... £680 to £847

Publicity Officer, J. O. Francis ..... £634 to £738

Executive Officers (Higher Grade), W. E. Bayton; H. C. Birch; S. D. Charles, M.C.; H. C. Hawkins (Establishment Officer), £515 to £634; Miss E. G. D. Locker ..... £396 to £515

Executive Officers, N. L. Cave; R. B. Christophers; B. R. Cody; Miss A. E. Geer; H. W. Hedderly; Miss E. V. Hubbard; A. T. May; W. F. Standing; F. H. E. Whiting

Men £155 to £515; Women £155 to £396

Local Commissioners, L. H. Beesley; H. J. Clare; G. L. Cruickshank; P. J. E. Dalmabay; Miss D. Heane; D. T. Evans, M.C.; J. A. H. Harries; P. F. Hone, D.S.O., M.C.; E. C. H. Jones; W. F. Macdonald; H. C. Robertson, M.C.; J. F. Woolley

Assistant Commissioners, Miss I. Ashton-Jones; F. B. Baker, M.B.E.; E. L. Bowley, M.C.; J. P. Bown; W. E. Cogman; W. N. Cryer; J. R. Currington; H. B. Dakin, M.B.E.; W. L. Davies; C. R. Dougall; A. J. Duncombe-Anderson; I. G. Elias;

**THAMES CONSERVANCY,**

2 Norfolk Street, Strand, W.C. 2.

The Conservation of the River Thames was granted to the Lord Mayor of London in 1487, and delegated to 12 Conservators in 1857, the powers being reconstituted in 1894. The Port of London Act, 1903, took over as from March 31, 1909, all rights, powers, and duties of the Conservators in respect of the river below Teddington. In 1932 the various Acts relating to the Conservators were repealed and a consolidating Act (The Thames Conservancy Act, 1932) was passed. The Conservators are also the Drainage Board of the Thames (Attachment Area).

*Chairman*, The Lord Desborough, K.G., G.C.V.O.

*Vice-Chairman*, Charles G. Field, J.R.

*Secretary*, F. W. Geary.

*Engineer*, G. J. Griffiths, M.Inst.C.E.

*Solicitor*, G. G. Corbice.

**BOARD OF TRADE.**

Great George Street, S.W. 1.

*Headquarters*, Great George Street, S.W. 1; *Bankruptcy Dept.*, 20, Great Smith Street, S.W. 1; *General Register and Record Office of Shipping and Seamen*, Tower Hill, E.C. 3; *Gas Administration and Standards Dept.*, 6 & 7, Old Palace Yard, S.W. 1; *Census of Production Office*, 80, Pall Mall, S.W. 1; *Companies Dept.*, 4, Central Bldgs., Matthew Parker Street, S.W. 1.

(See also *Dept. of Overseas Trade*, and *Patent Office*.)

A Council for Trade and Plantations was instituted by King Charles II. in 1666. This paid Council was abolished in 1782, and in 1786 a Committee of the Council on Trade (which, unlike the other Council Committees, had a President of its own) was appointed. The President of the Board of Trade, as at present constituted, controls the Department principally responsible for matters relating to trade and industry. The Board is concerned with international, commercial, and industrial policy and administers certain statutes including those relating to merchant shipping and seamen, bankruptcy, joint stock companies, gas, key industries, merchandise marks, cinematograph films, weights and measures, patents, designs, trade marks and copyright, and mines and quarries. It administers the Coastguard, and also exercises control over the principal lighthouse authorities of the country, and over the construction of works on tidal lands. It collects and publishes statistics of the trade and industry, shipping and navigation of this country, its Dominions and Protectorates, and foreign countries, as well as particulars of customs tariffs, regulations, &c., and publishes a weekly journal of commercial information. The *Food Council* is attached to this department. The Department arranges the provision of all sea transport required for the conveyance of personnel and stores by the fighting services and other Government Departments. Jointly with the Foreign Office the Board of Trade controls the Overseas Trade Department.

*President*, Rt. Hon. Walter Runciman, M.P. ....£5,000

*Private Secs.*, J. R. C. Helmore; G. J. Mac-

Mahon ..... (allowance) £120

*Parly. do.*, Lt.-Cdr. Peter Agnew, R.N., M.P. unpaid

*Personal Private Sec.*, Miss R. Miller .....unpaid

*Parliamentary Sec.*, E. L. Burgin, LL.D., M.P. ....£1,500

*Private Sec.*, R. C. Bryant ..... (allowance) £175

*Parly. do.*, J. A. L. Duncan, M.P. ....unpaid

**Additional Parliamentary Secretaries.**

(1) (*Overseas Trade*), Capt. Rt.-Hon. Euan Wallace,

M.C., M.P. ....£2,000

*Private Secs.*, A. E. Percival (*Board of Trade*) (allowance

£120); W. Harpham (*Dept. of Overseas Trade*) ..... (allowance) £175

*Parly. do.*, P. Munro, M.P. ....unpaid

(2) (*Mines*) Capt. Harry Crookshank, M.P. ....£1,500

*Private Sec.*, R. N. Quirk ..... (allowance) £175

*Parliamentary do.*, Capt. R. Briscoe, M.C., M.P. unpaid

*Chief Economic Adviser to H.M. Govt.*, Sir Frederick

W. Leith-Ross, K.C.B., K.C.M.G. ....£3,000

*Private Sec.*, Miss N. F. E. Cracknell, M.B.E.

*Chief Industrial Adviser to H.M. Govt.*, Sir Horace J.

Wilson, G.C.M.G., K.C.B., C.B.E. (Seconded to the

Treasury for service with the Prime Minister) ....£3,000

*Deputy to the Chief Industrial Adviser*, L. Browett,

C.B.E., M.B.E. ....£1,900
